# Your Turn 1

Run this code in your notebook to make a graph.

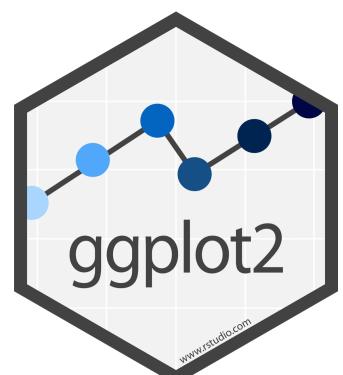

Pay strict attention to spelling, capitalization, and parentheses!

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = K_ppm, y = Rb_ppm))
```

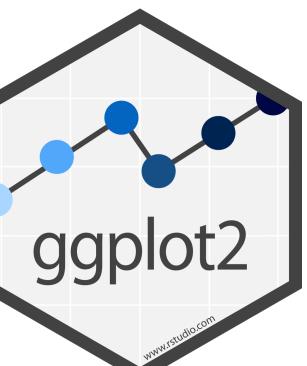

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

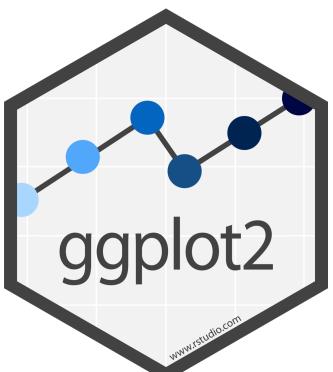

1. "Initialize" a plot with `ggplot()`
2. Add layers with `geom_` functions

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

Pro tip: Always put the + at the end  
of a line, Never at the start

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

data

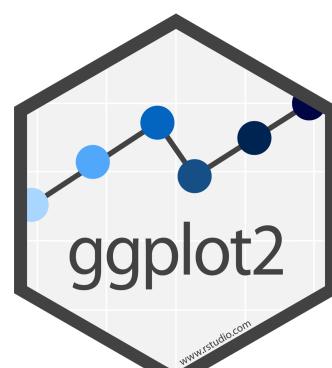

+ before new line

type of layer

aes()

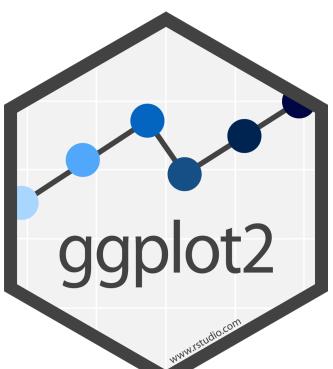

x variable

y variable

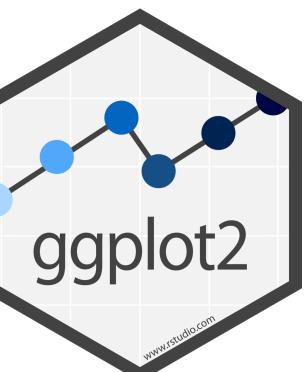

# A template

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))  
  
geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

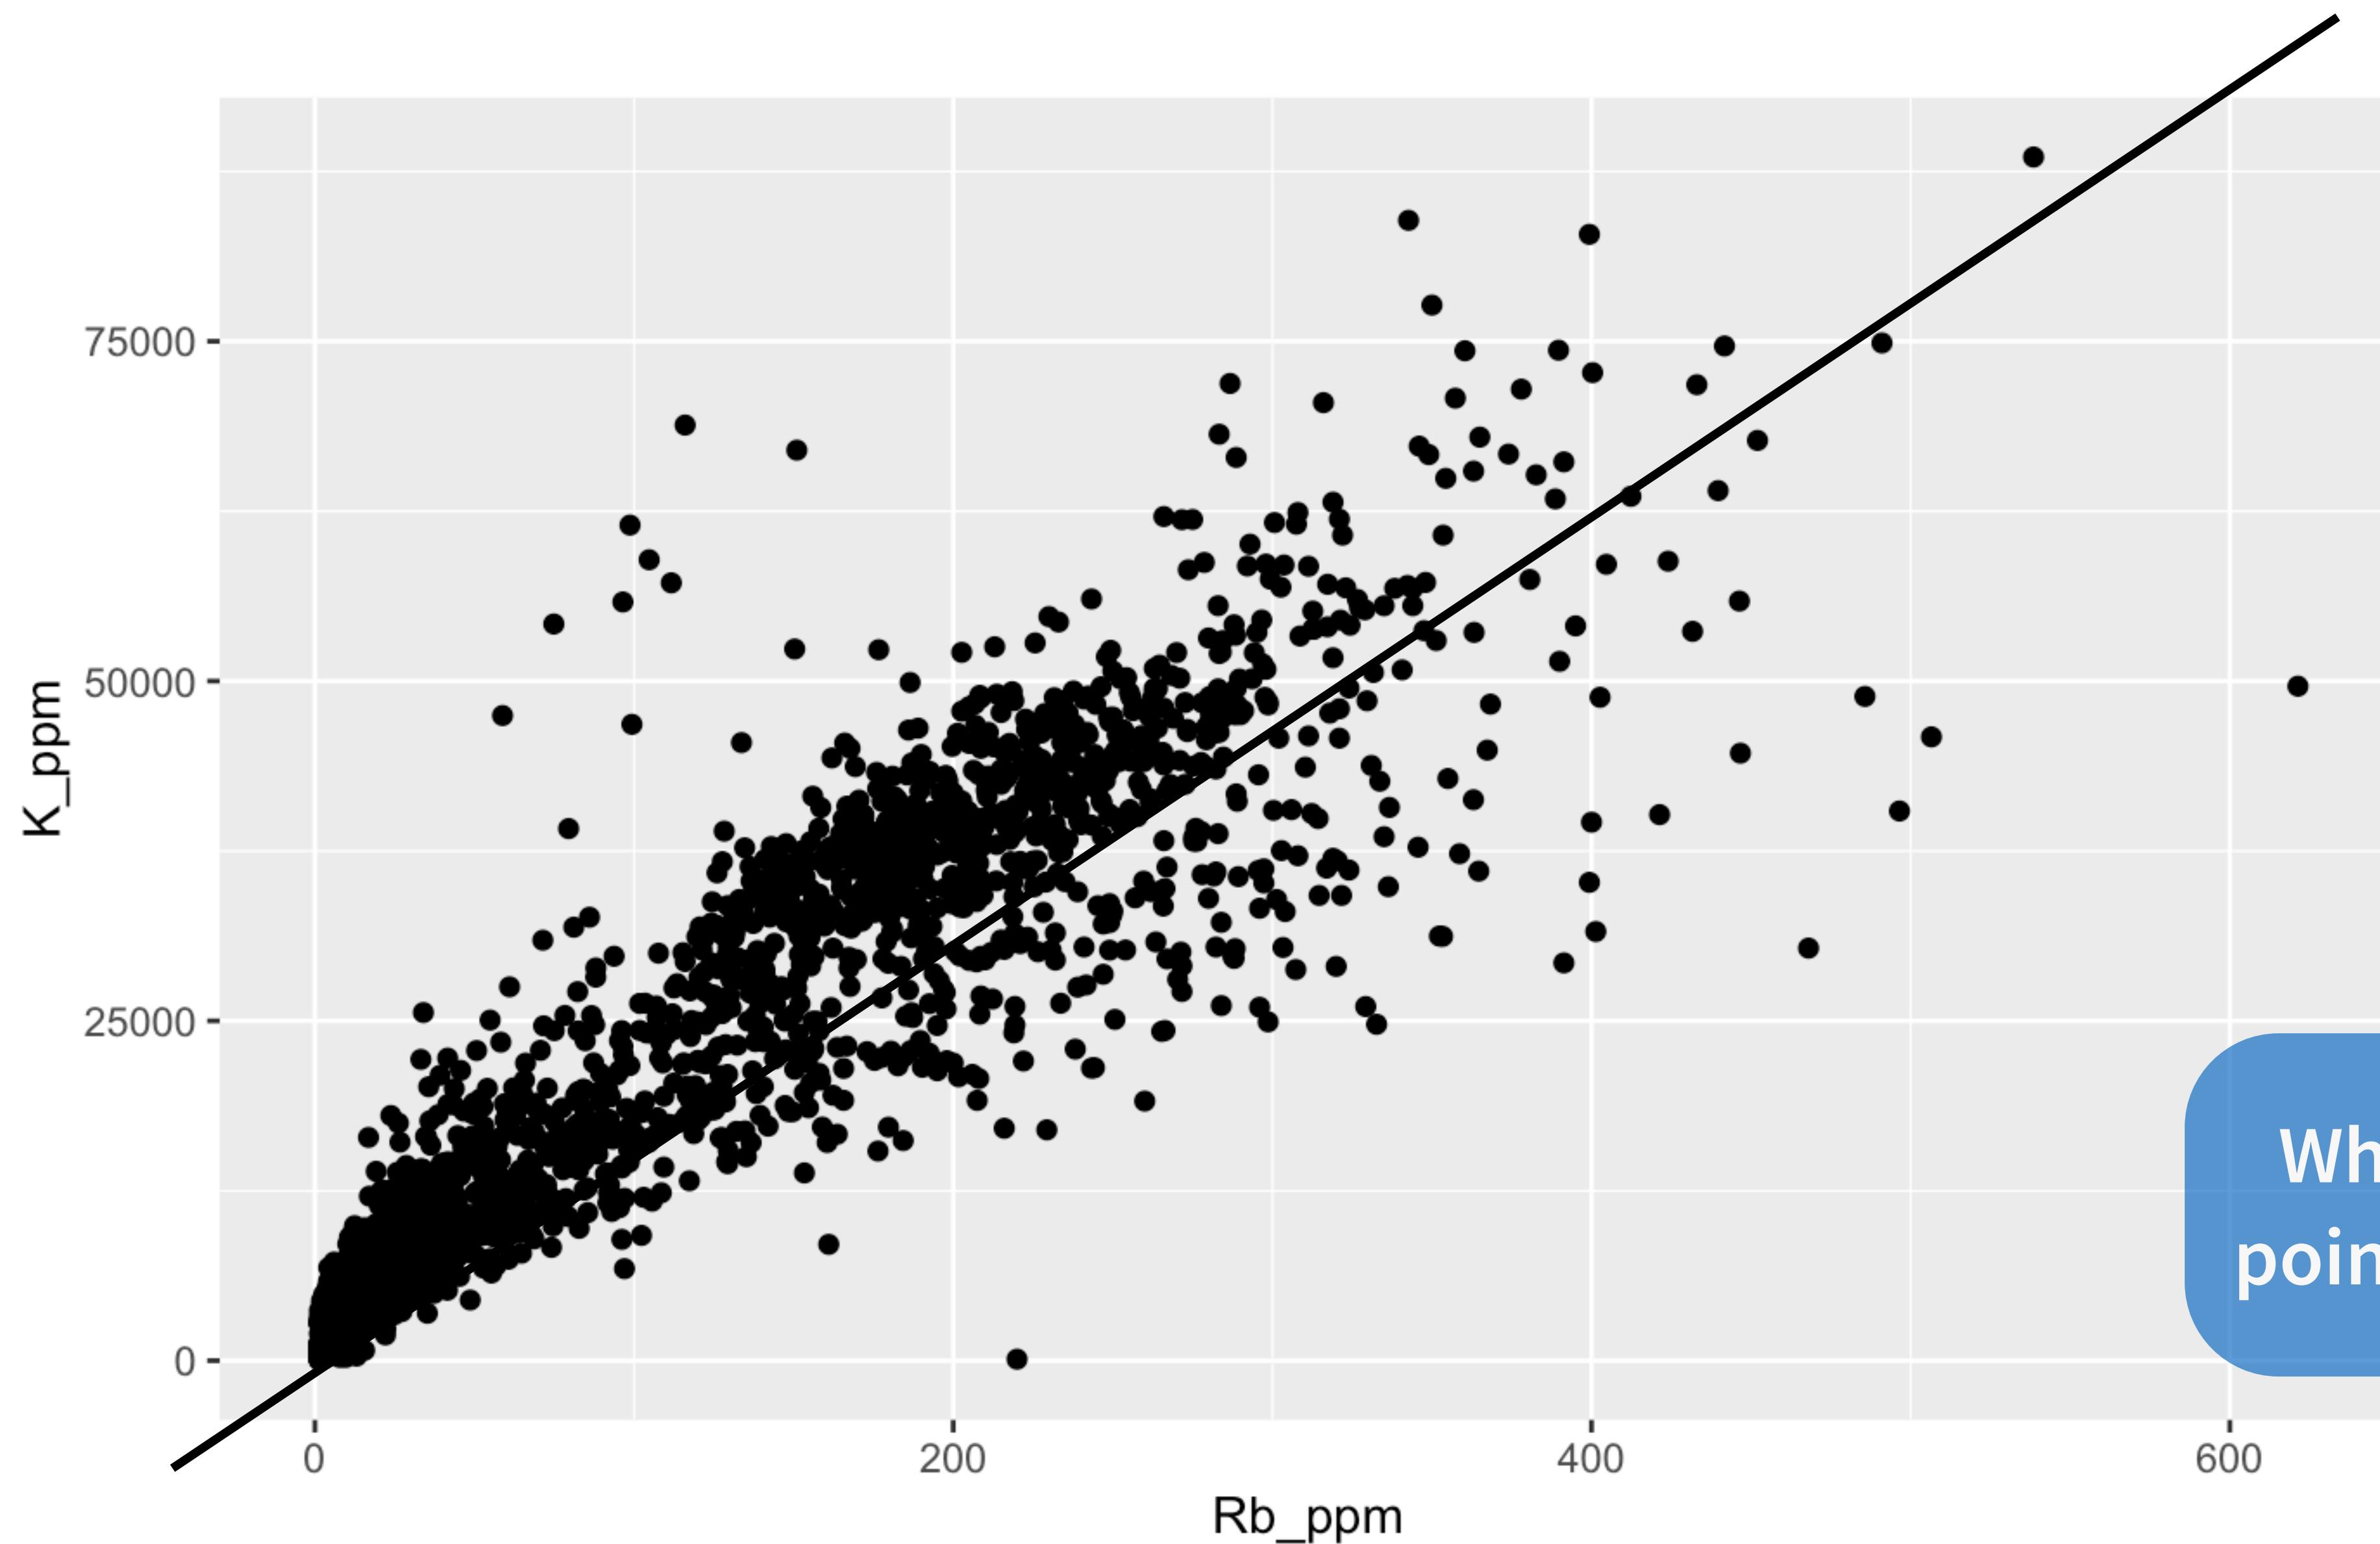

# A template

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

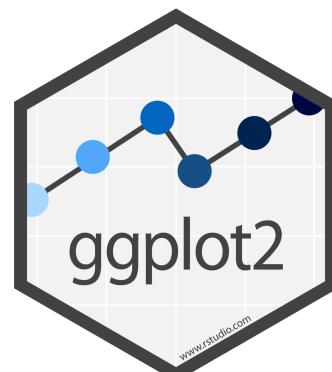

# Mappings

R

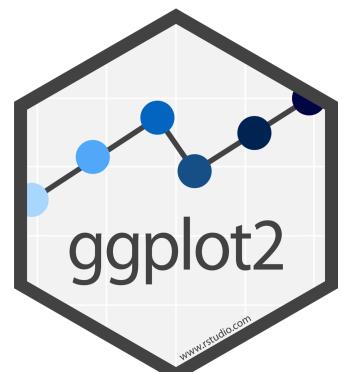

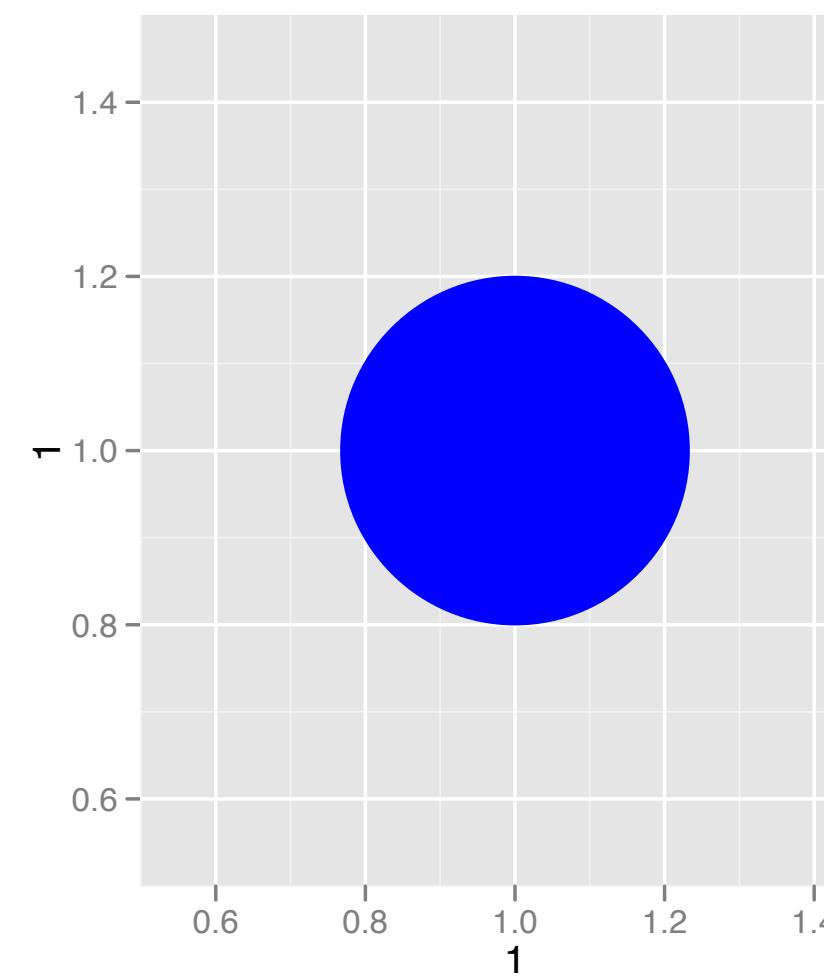

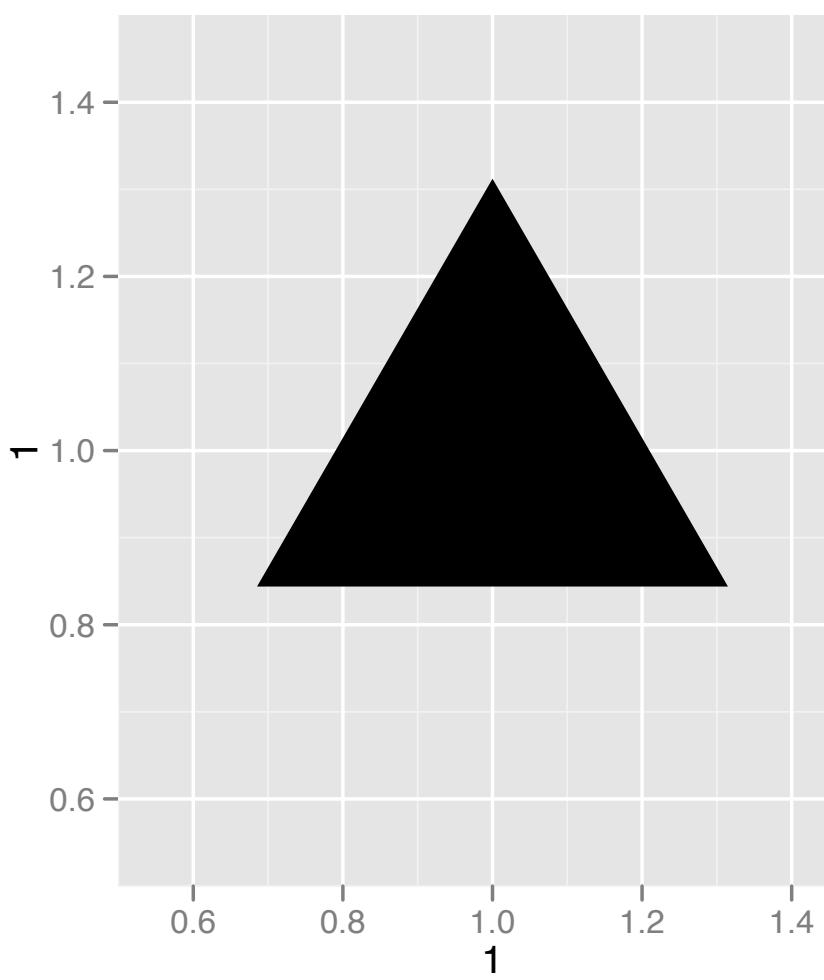

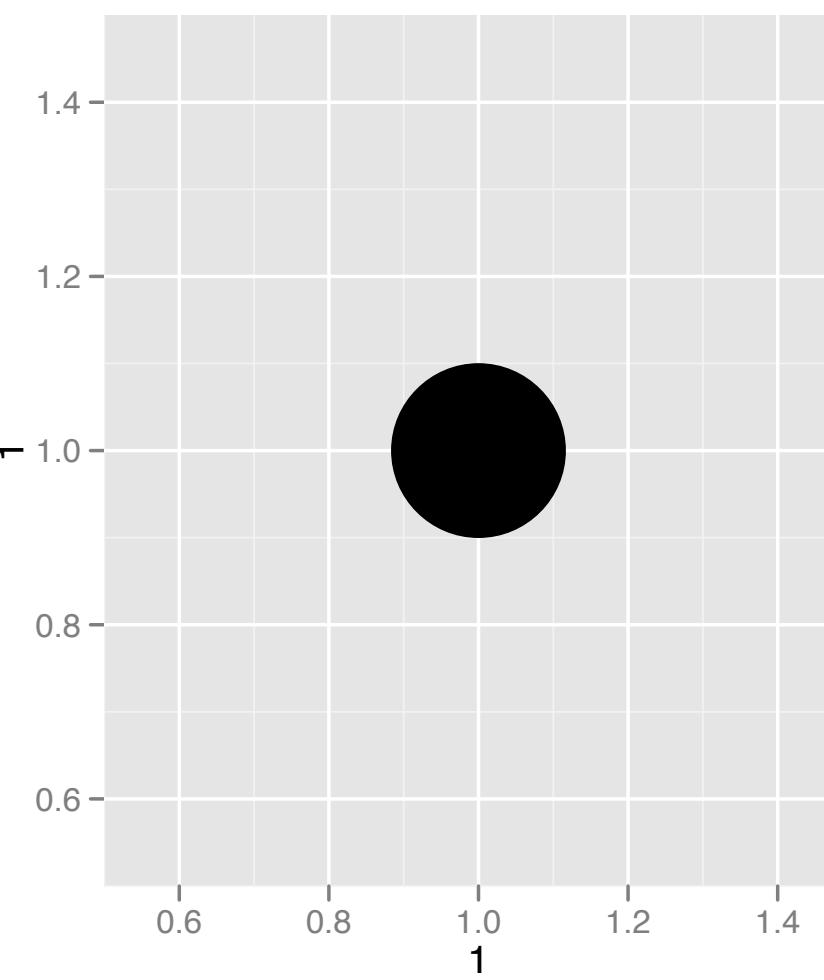

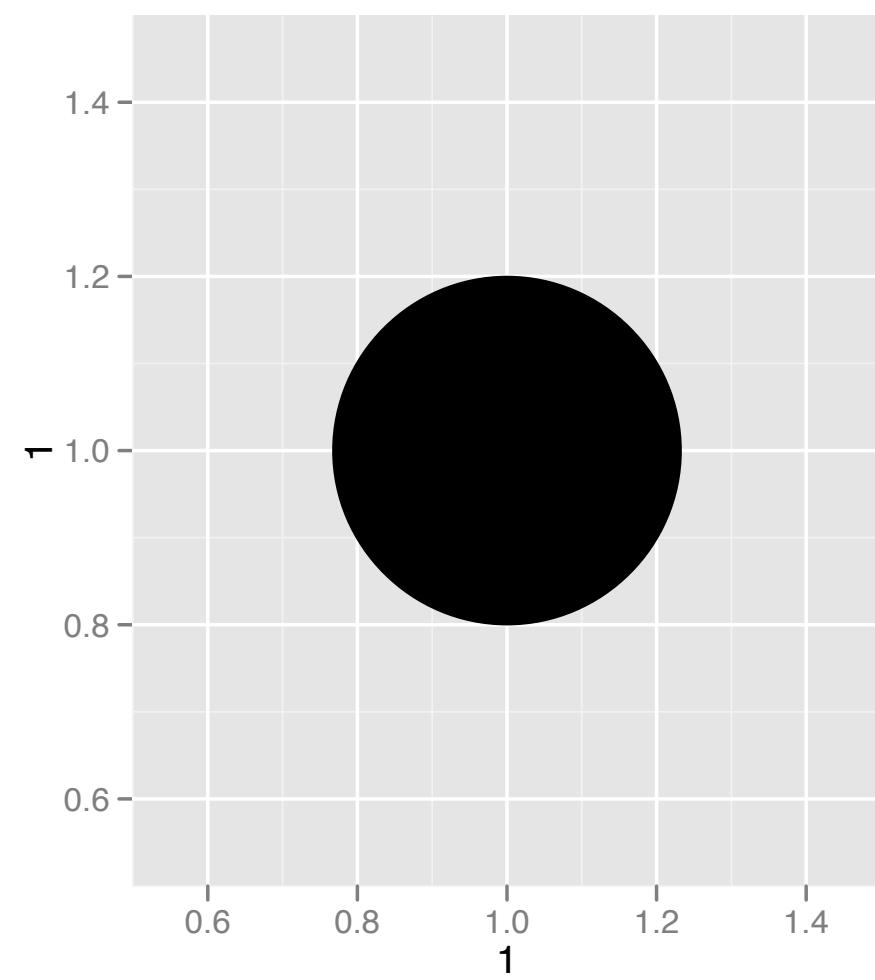

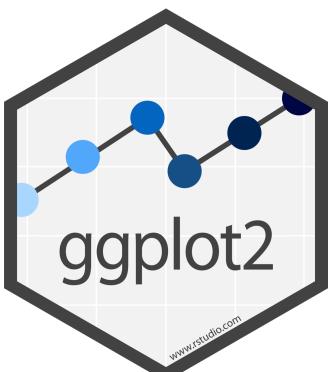

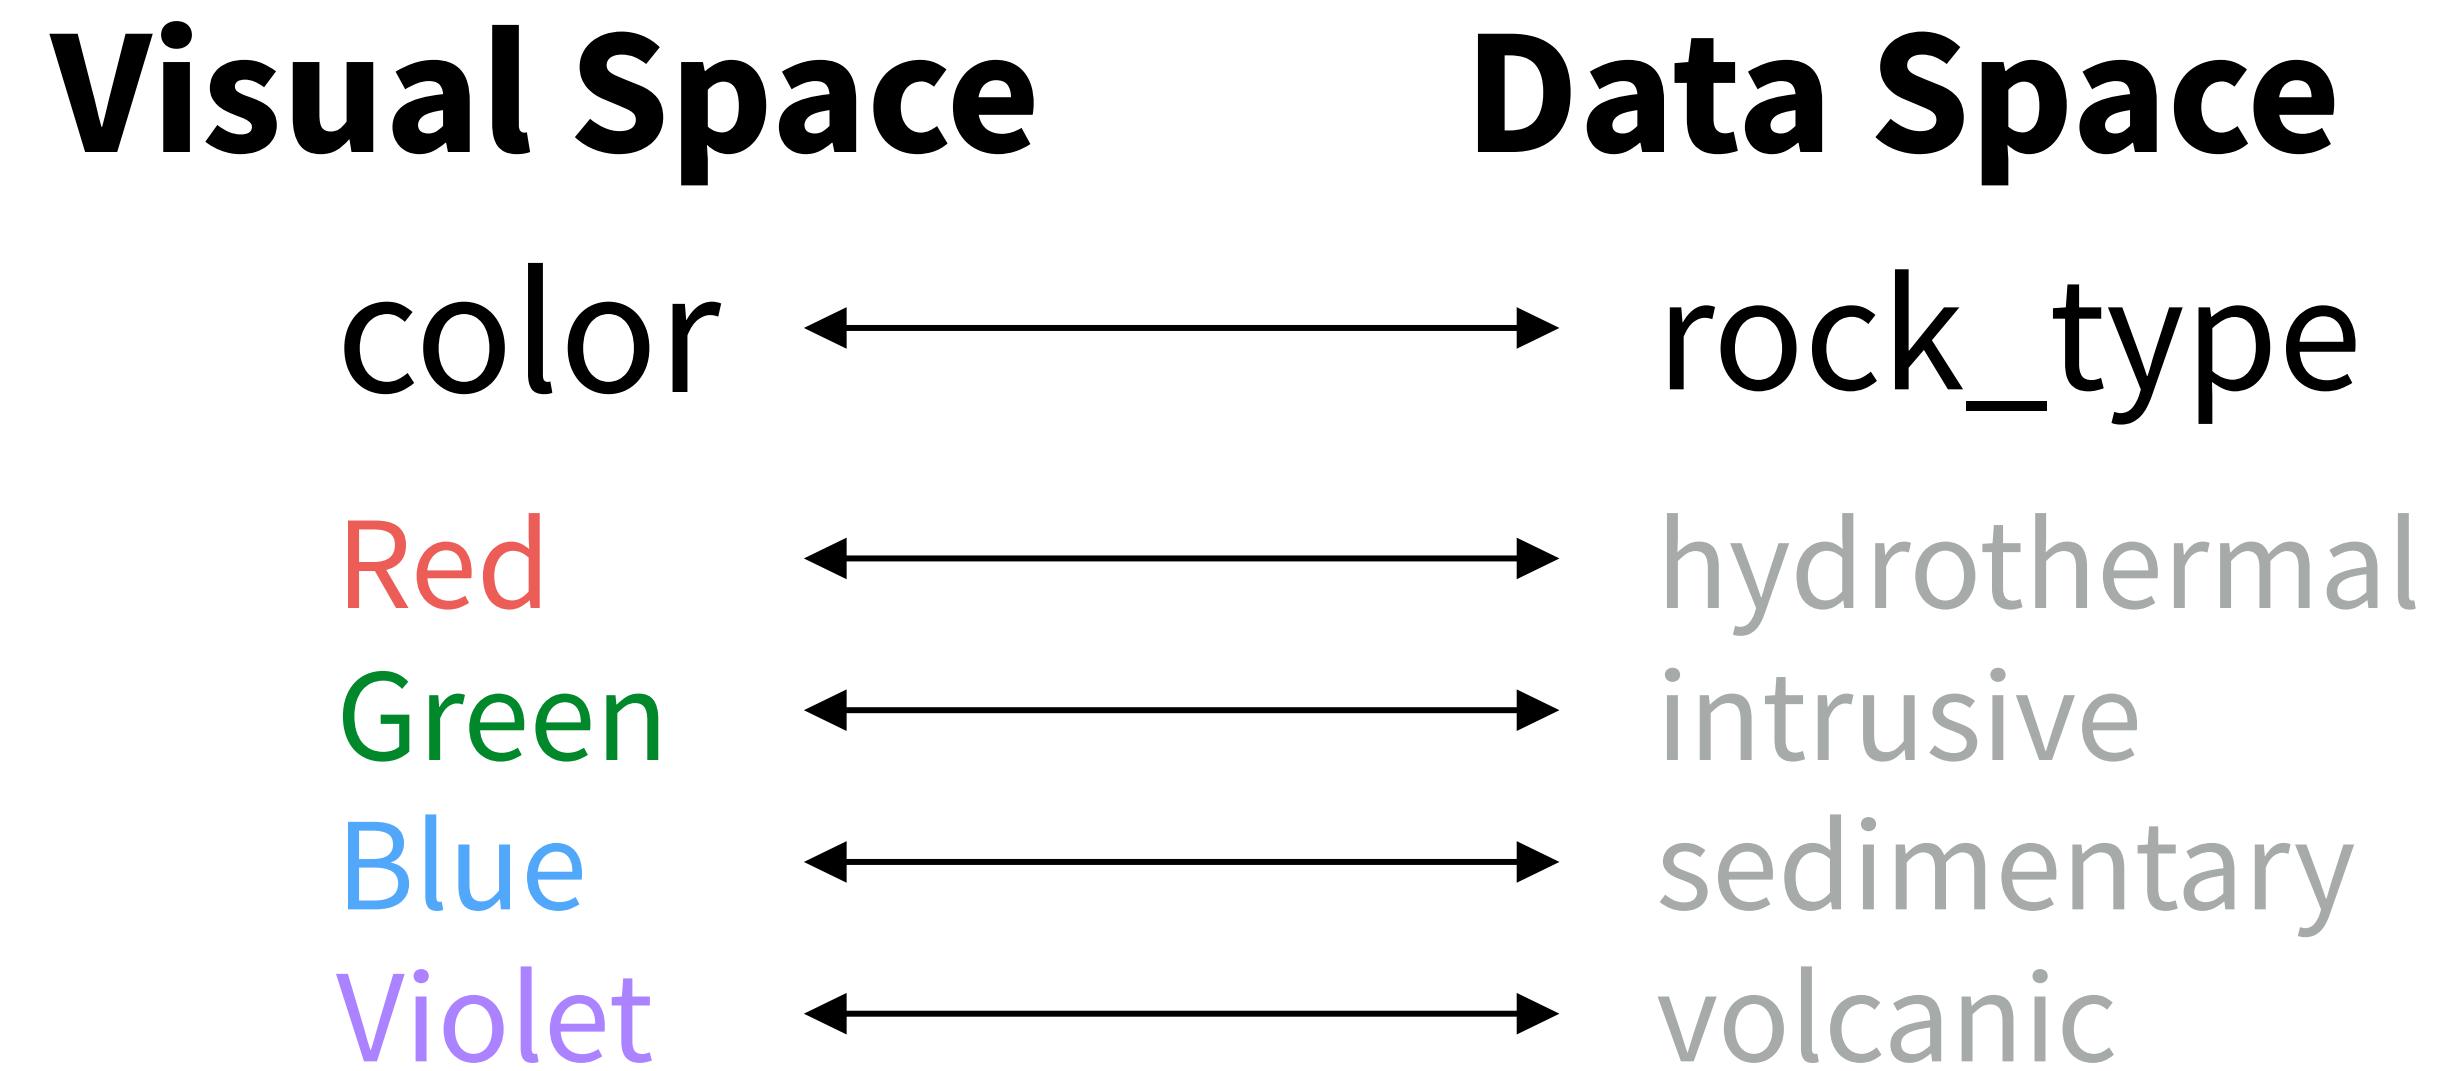

Why are some  
points different?

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm))
```

# Aesthetics

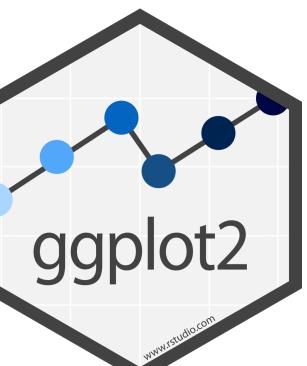

# Aesthetics

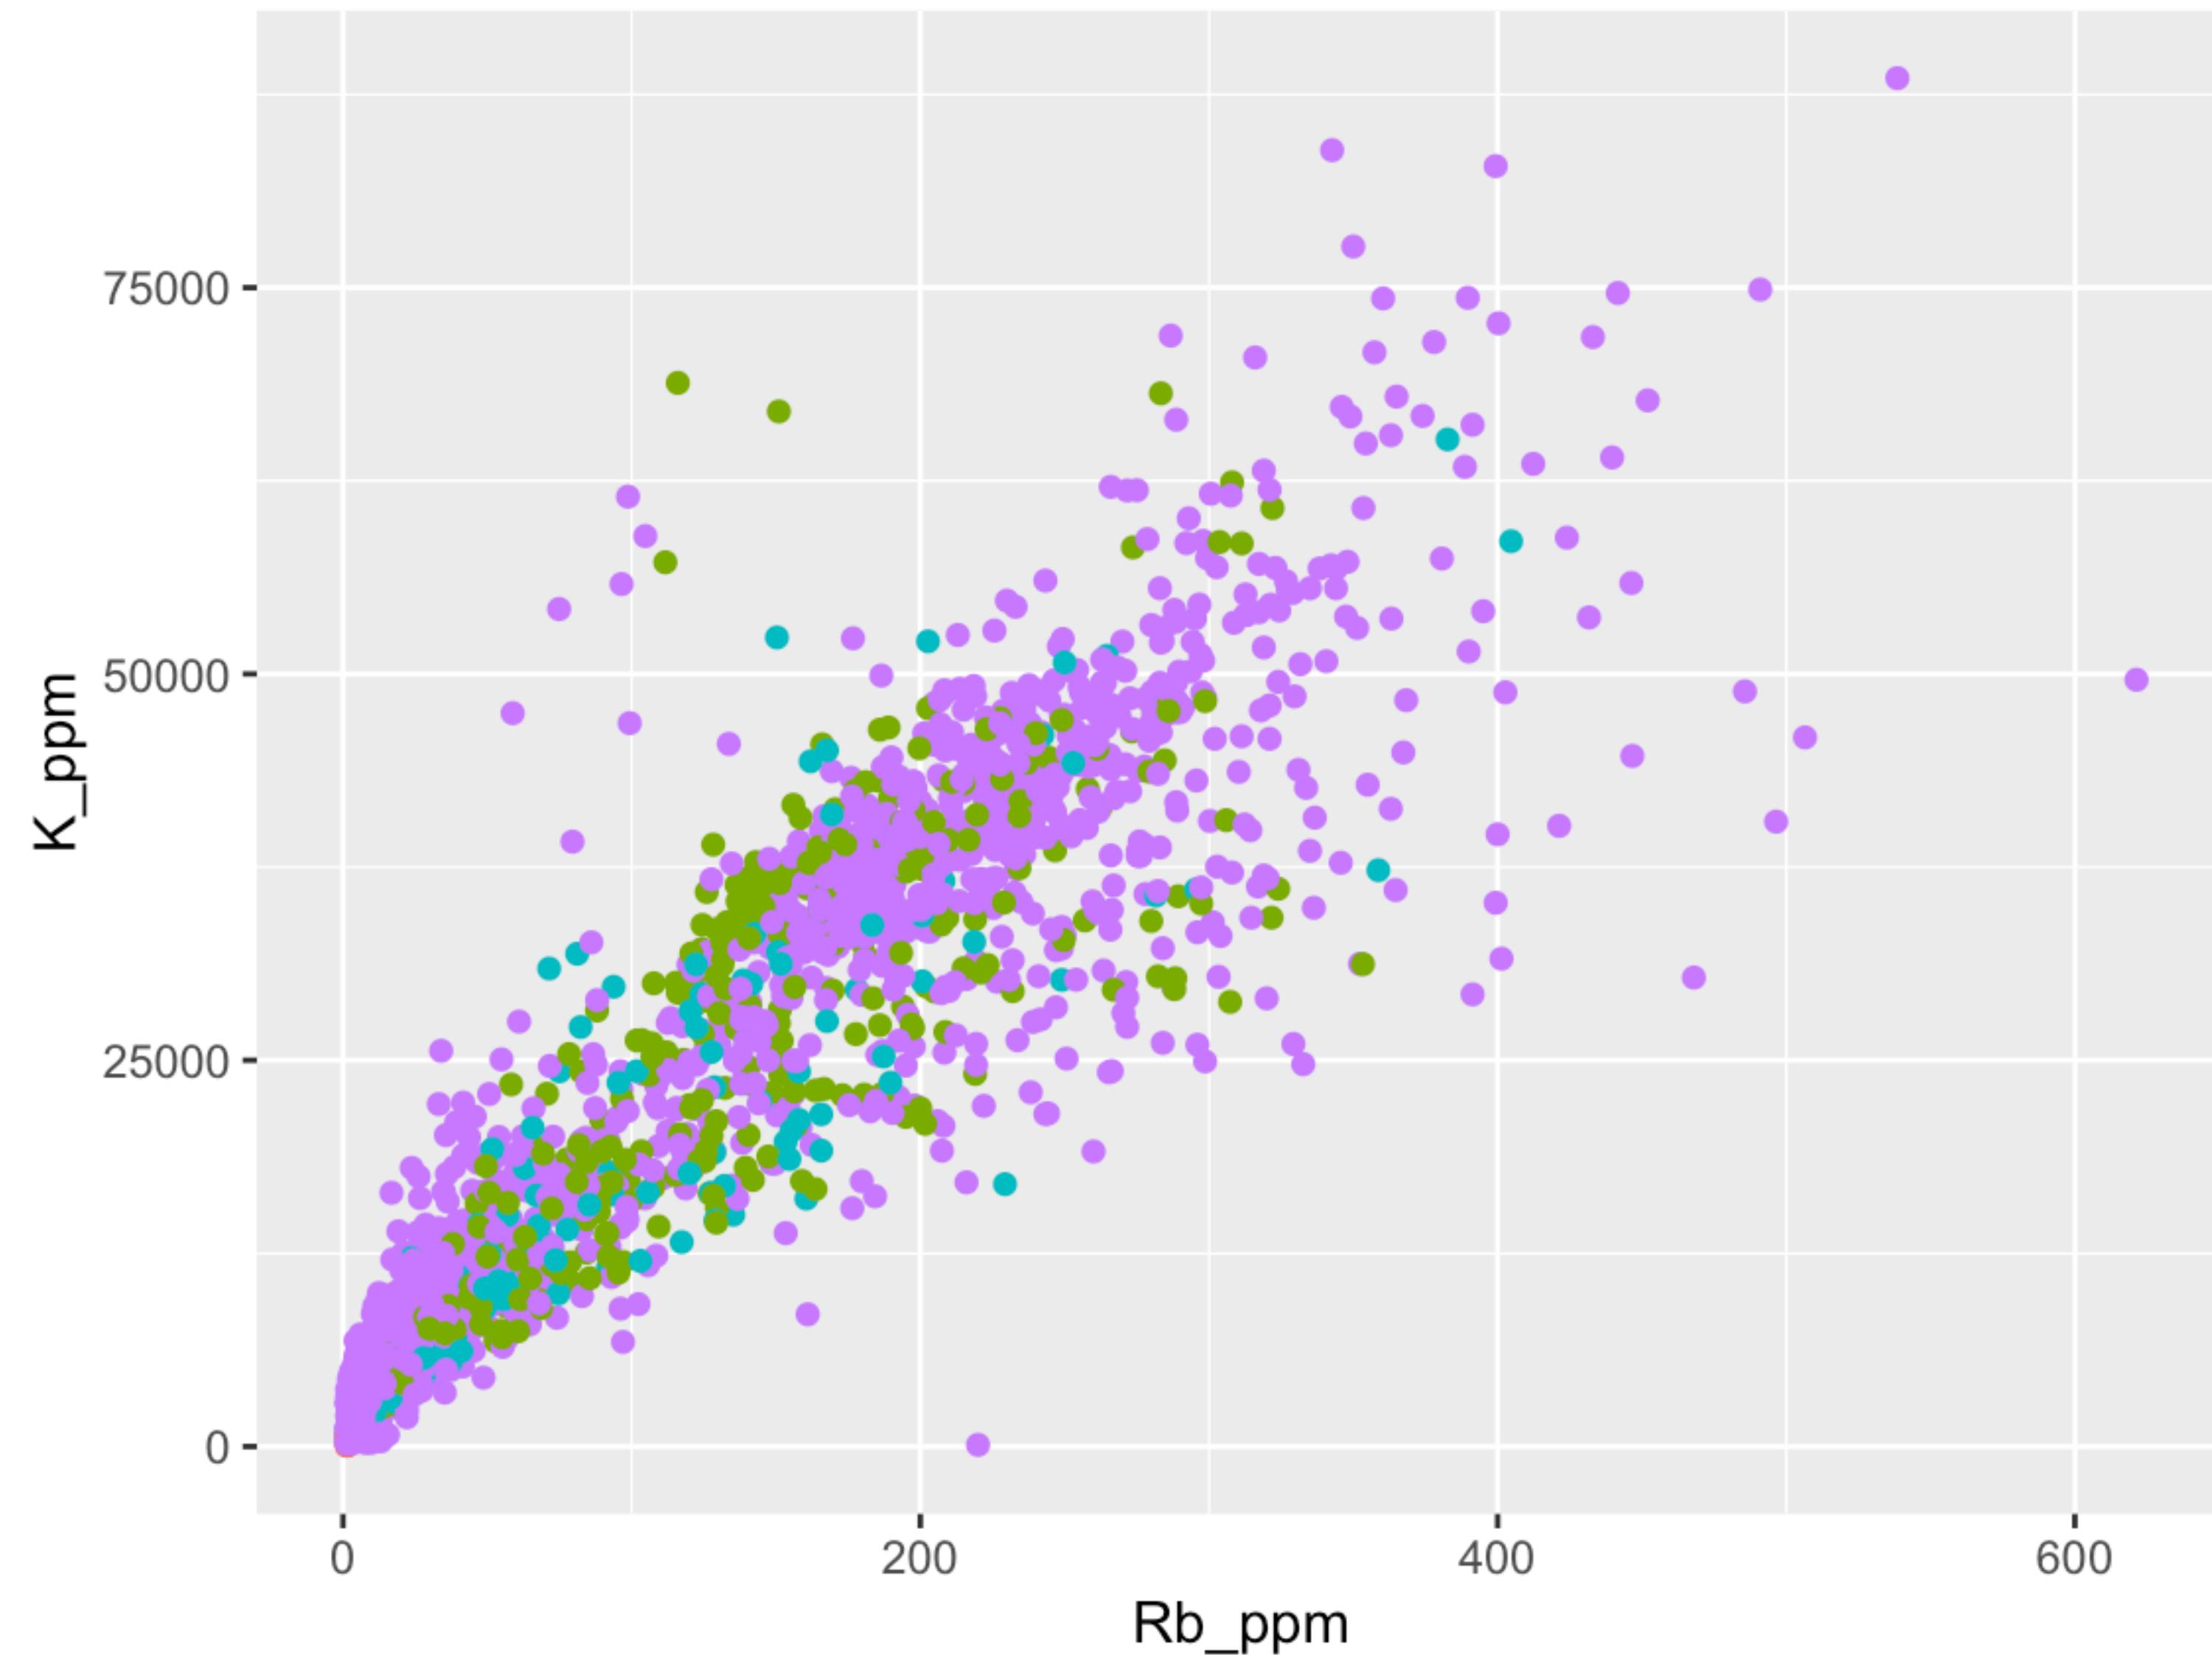

aesthetic  
property

Variable to  
map it to

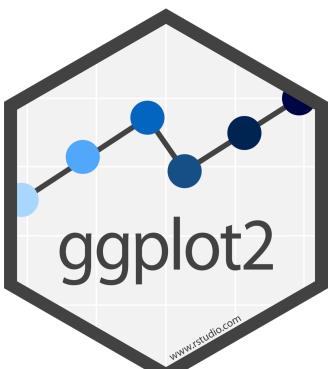

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = rock_type))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, size = rock_type))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, shape = rock_type))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, alpha = rock_type))
```

Legend added automatically

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm, color = rock_type))
```

# Your Turn 2

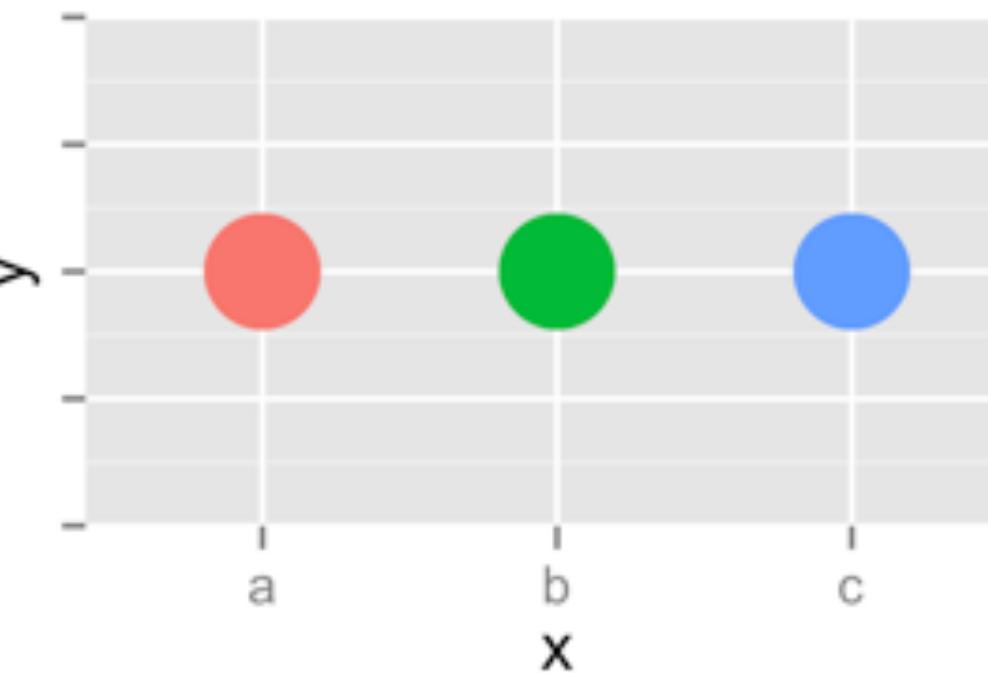

In the next chunk, add color, size, alpha, and shape aesthetics to your graph. Experiment.

Do different things happen when you map aesthetics to discrete and continuous variables?

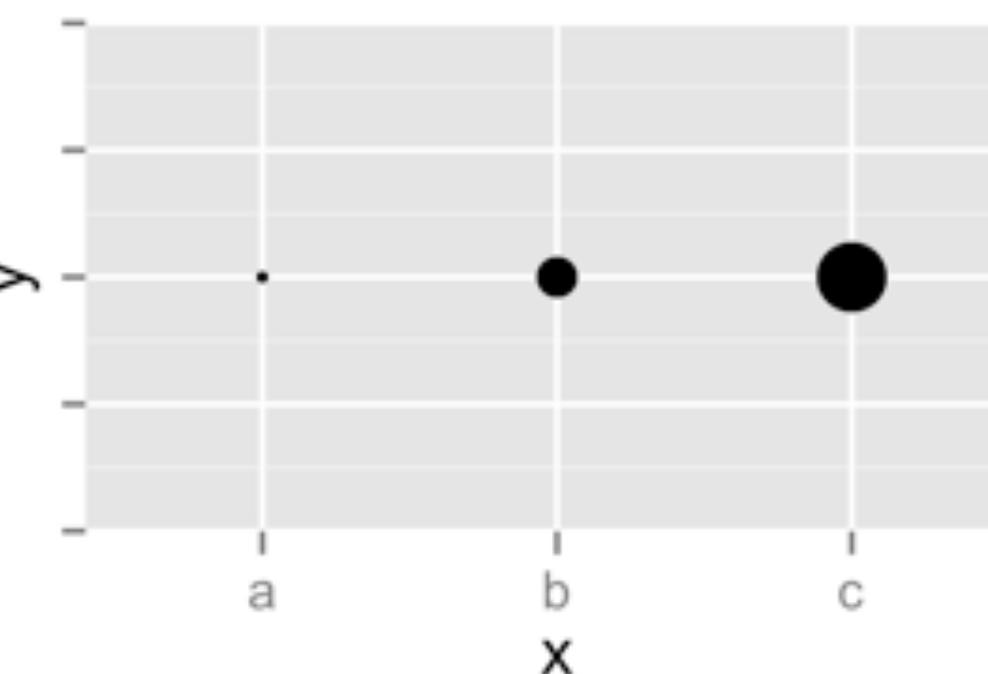

What happens when you use more than one aesthetic?

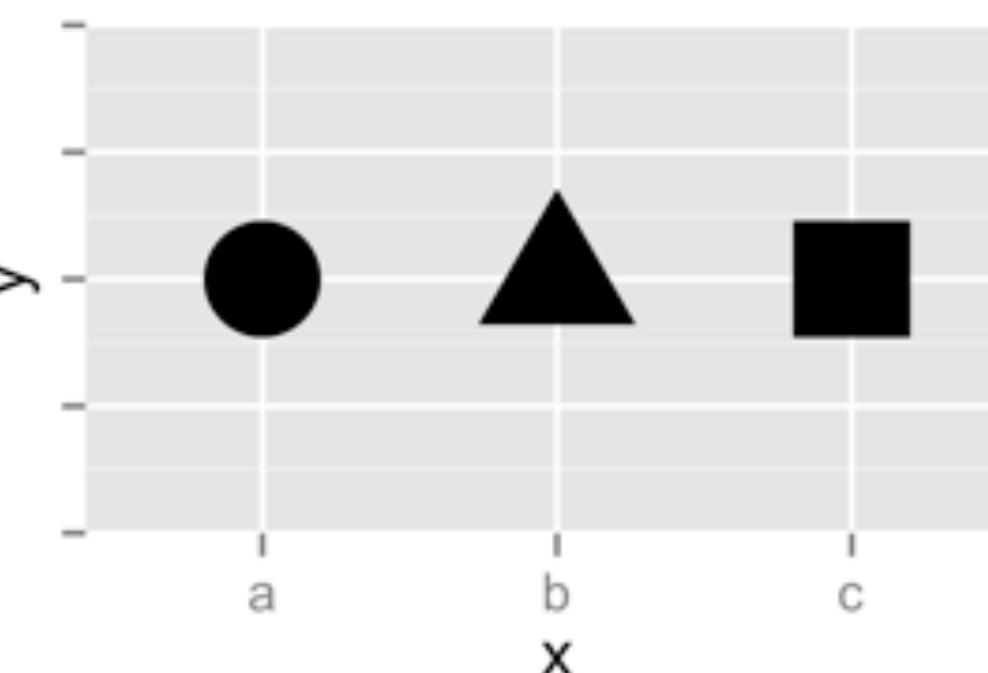

Color

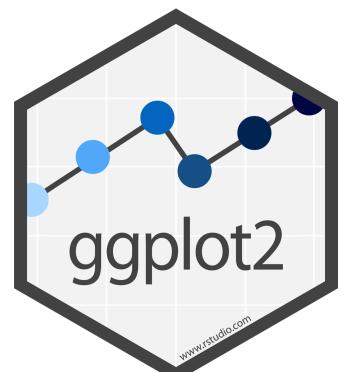

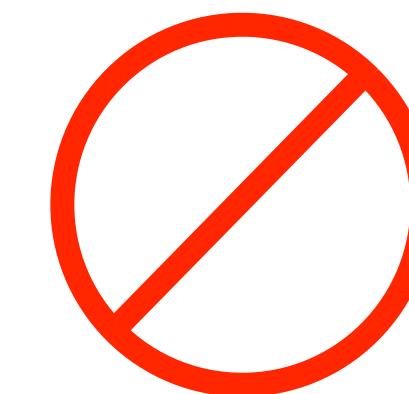

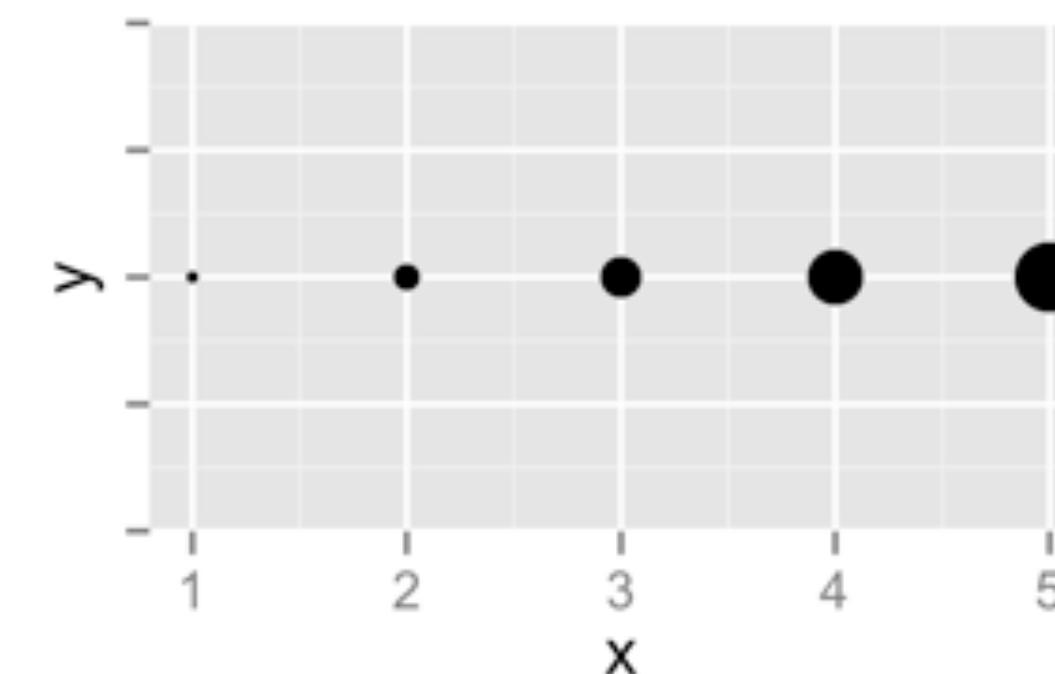

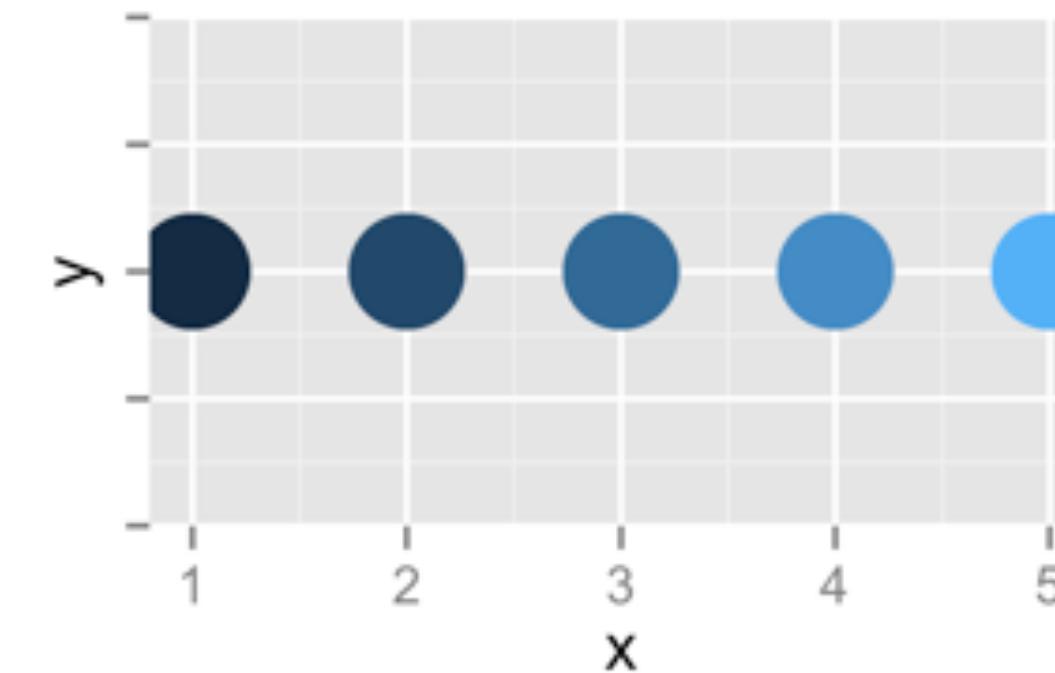

Size

Shape

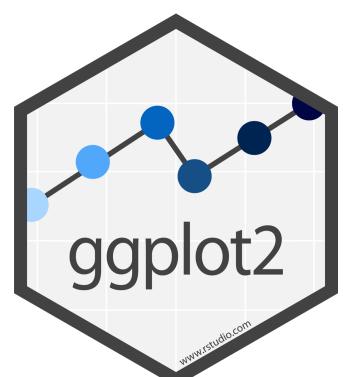

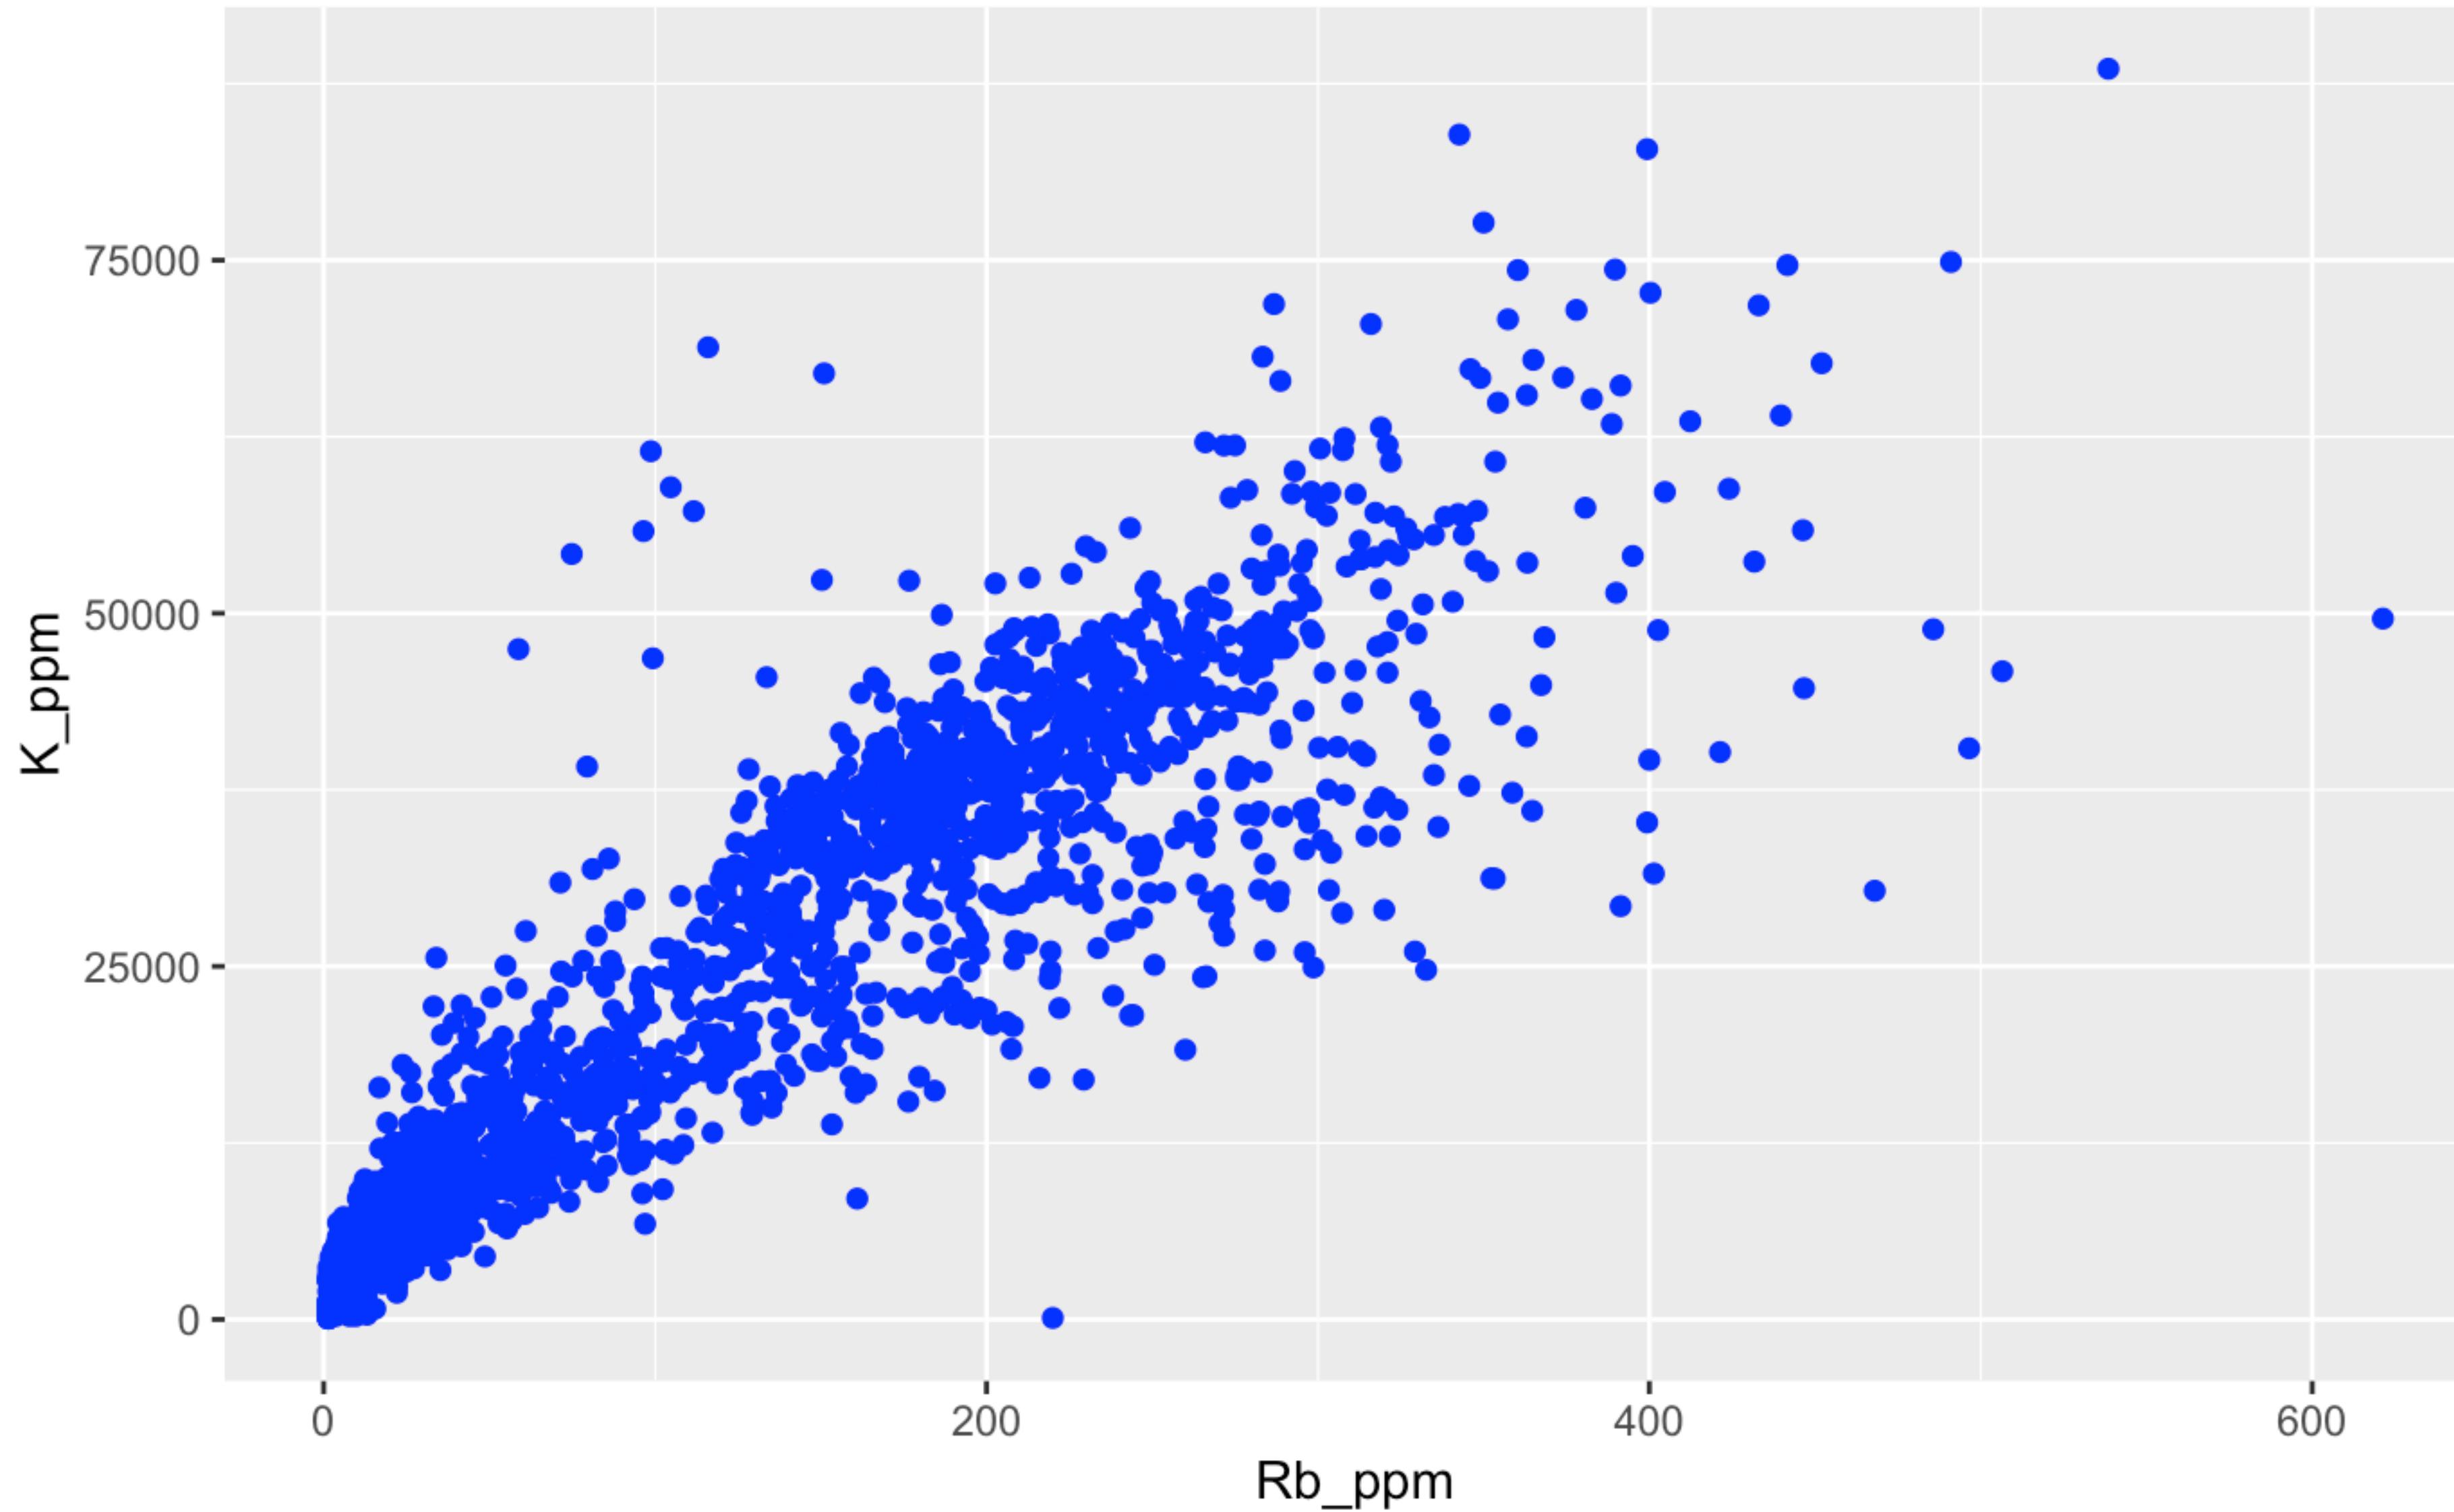

Continuous

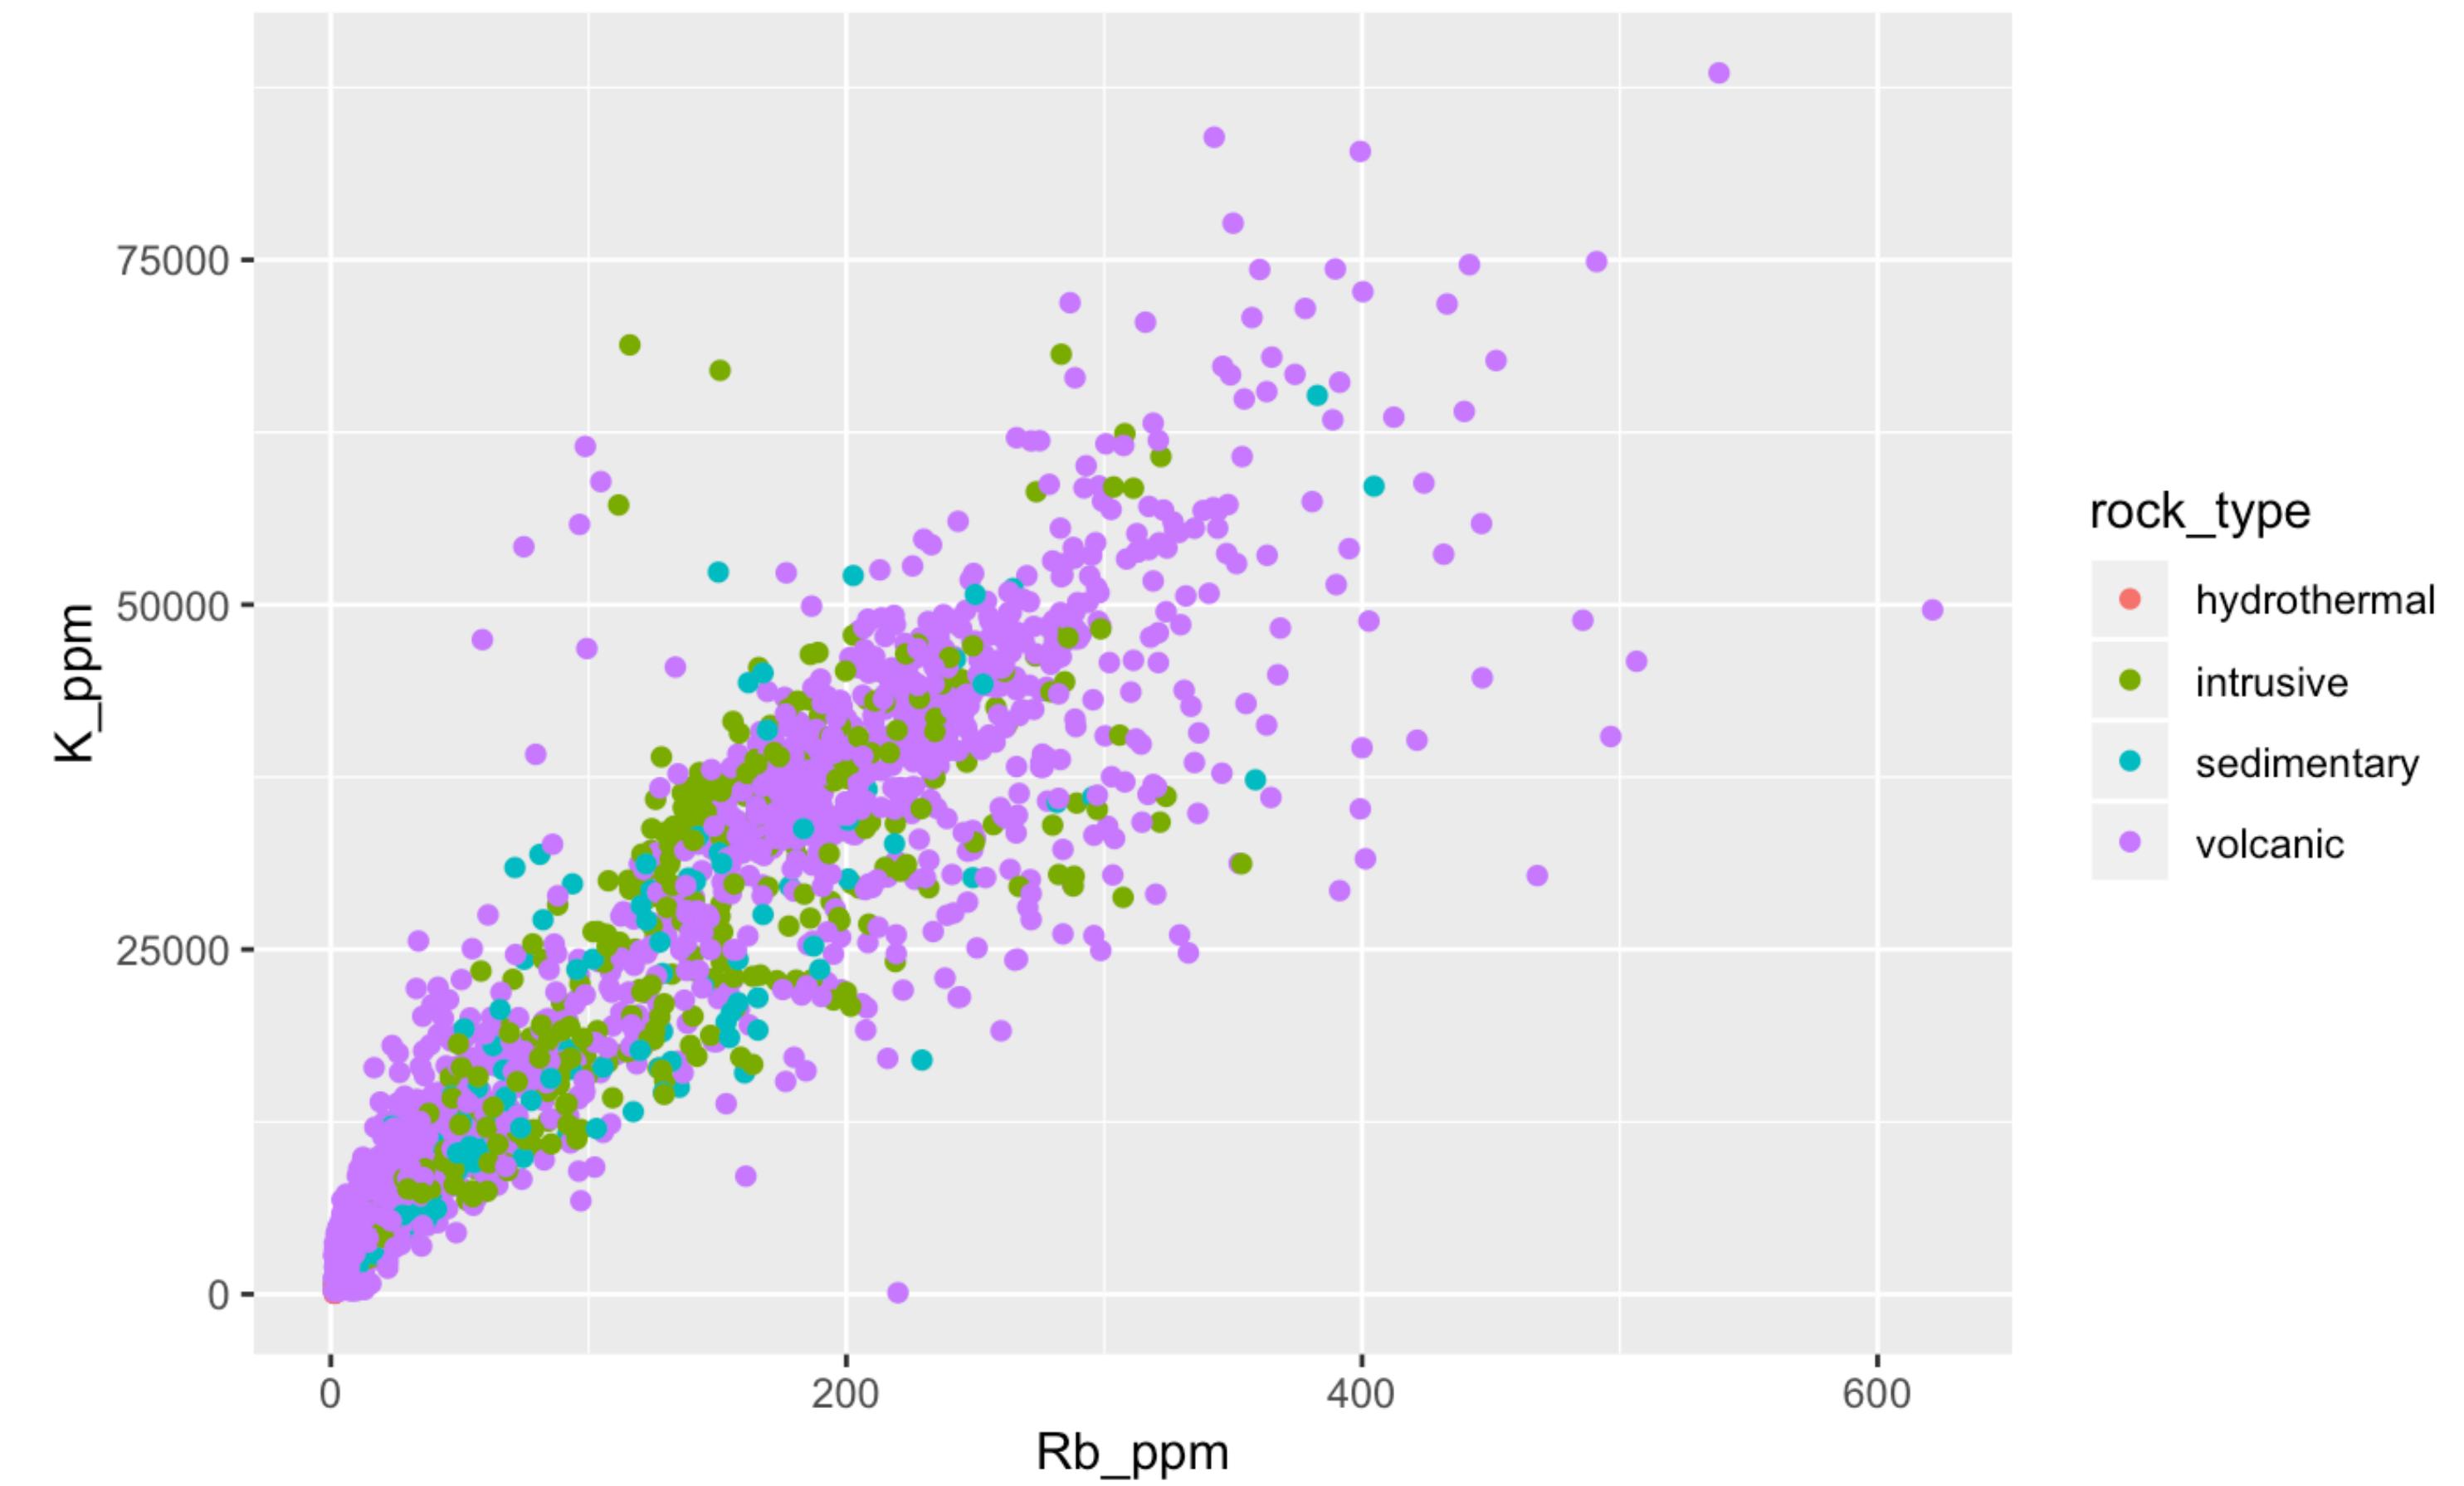

# set vs. map

A large, semi-transparent watermark of the R logo is positioned in the bottom right corner. The logo consists of a circular emblem with the letters "R" inside.

# How would you make this plot?

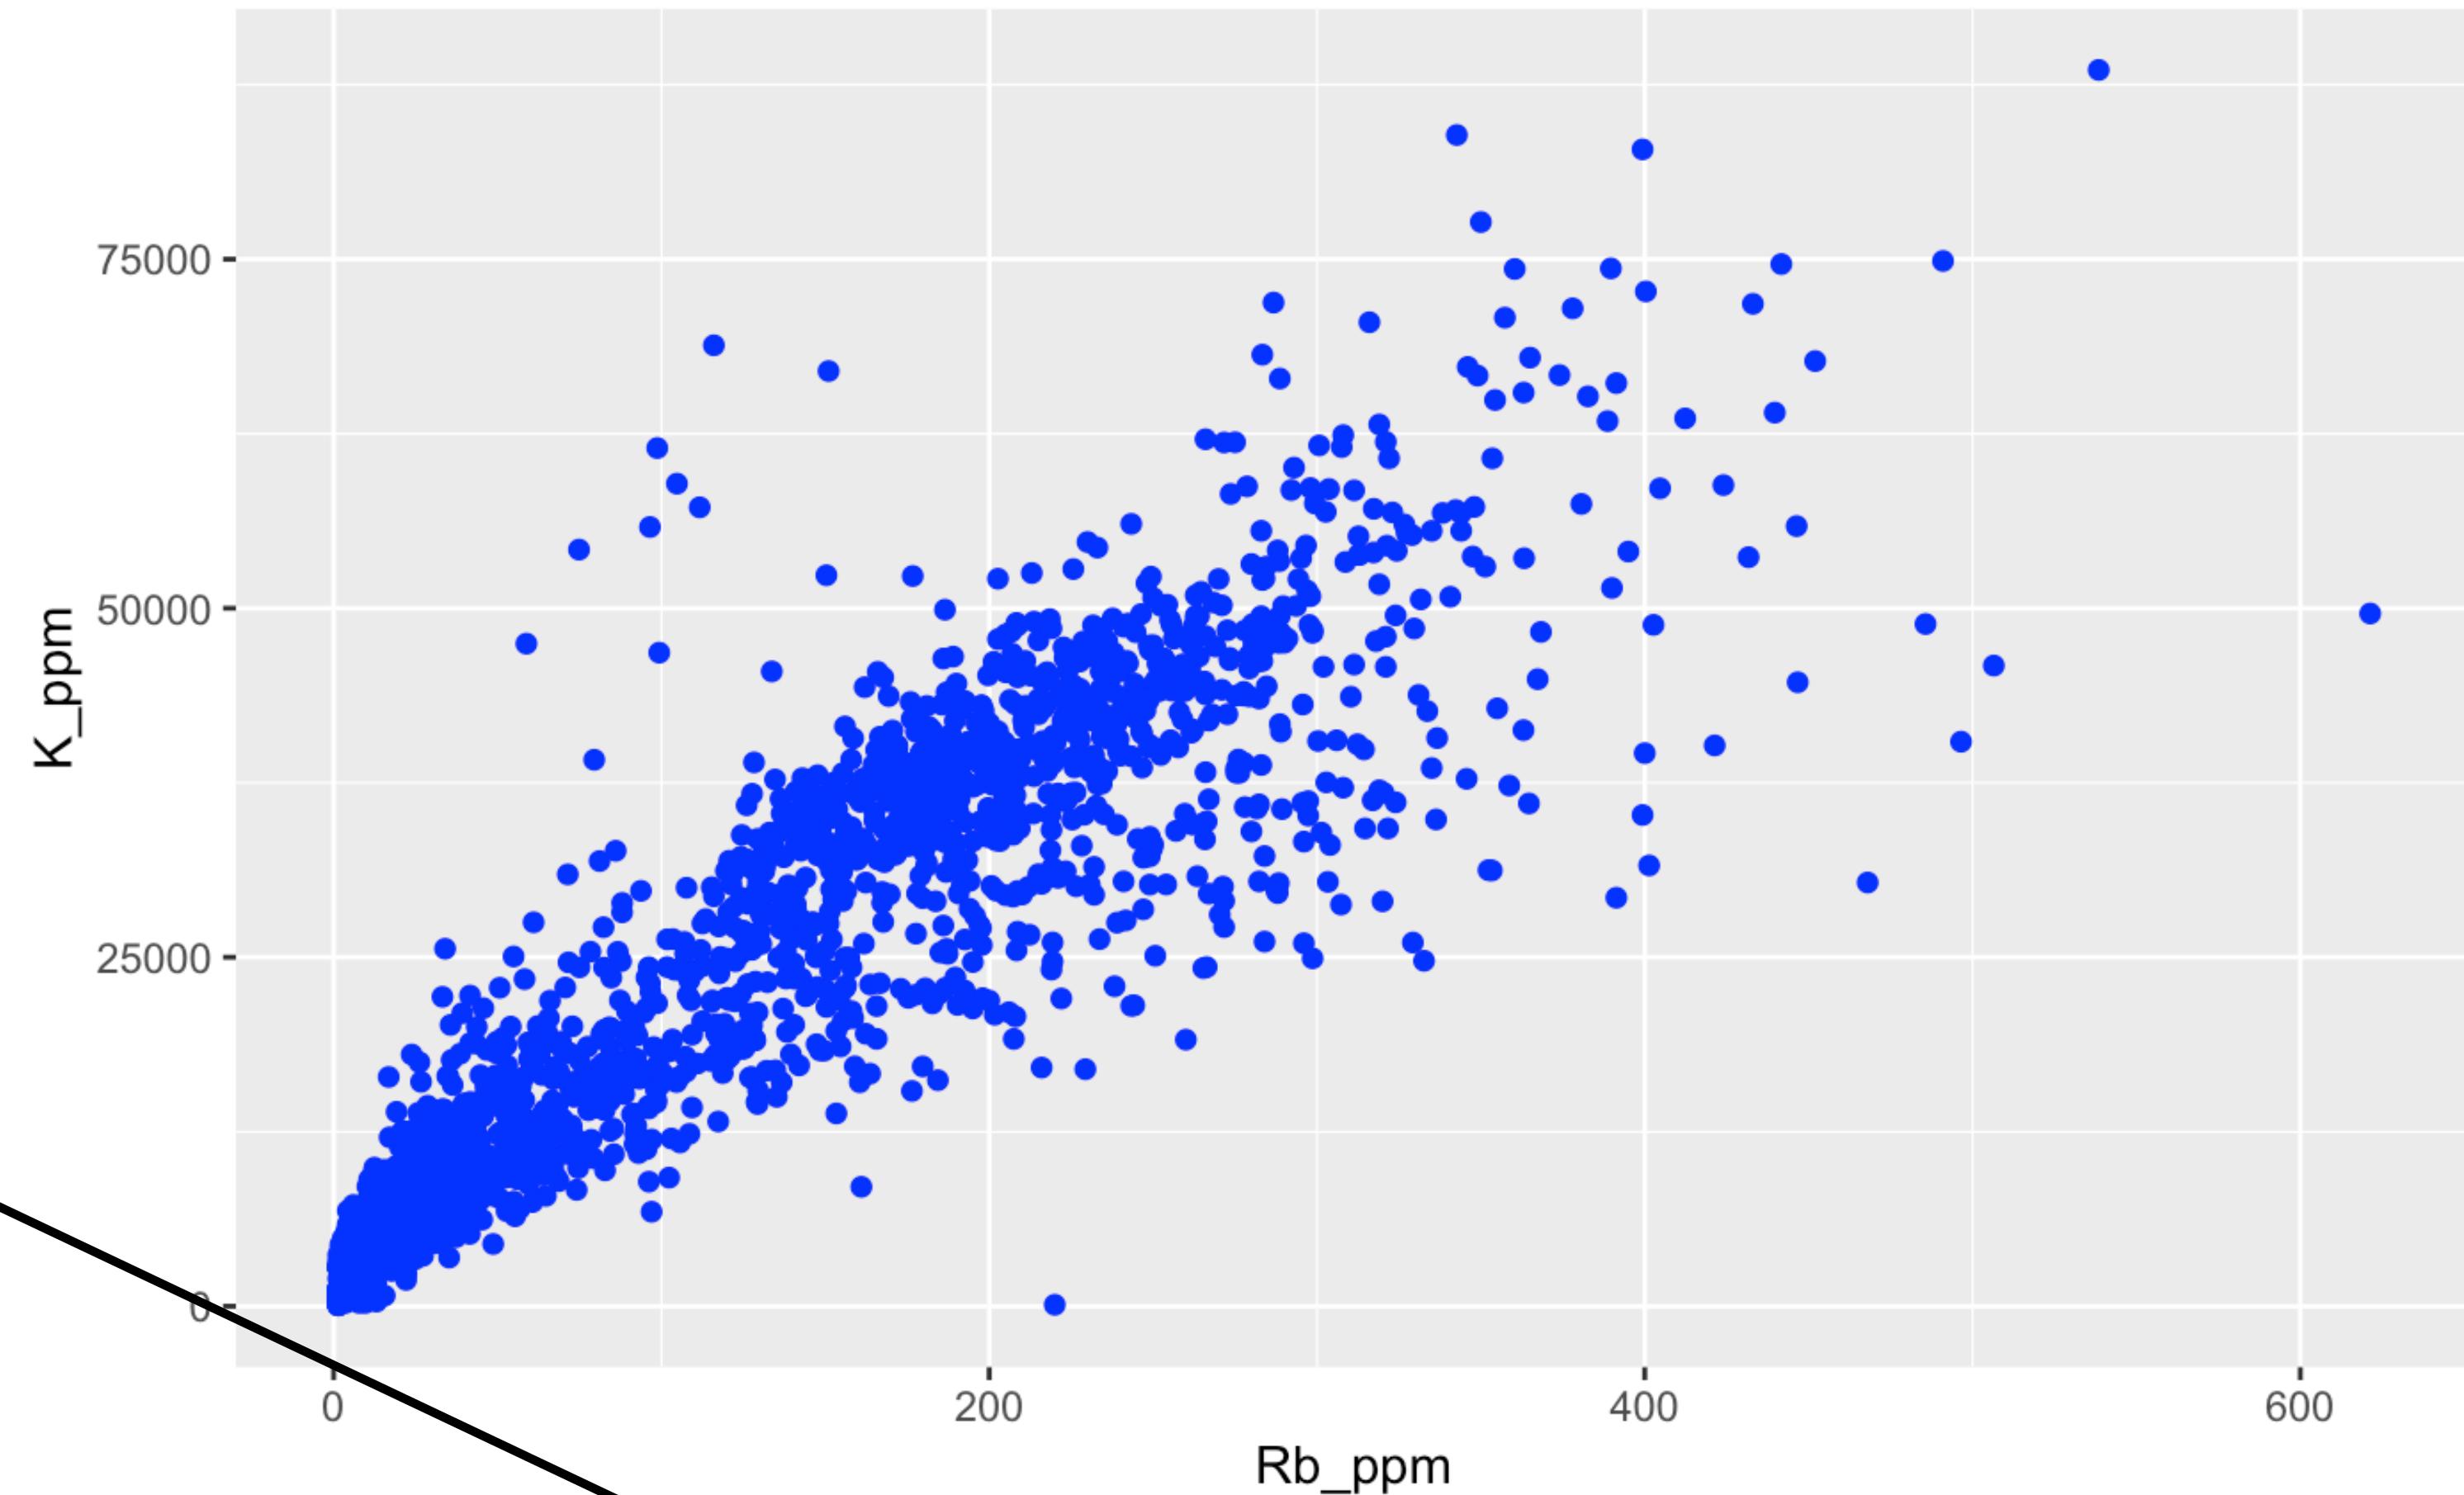

**Inside of aes(): maps an aesthetic to a variable**

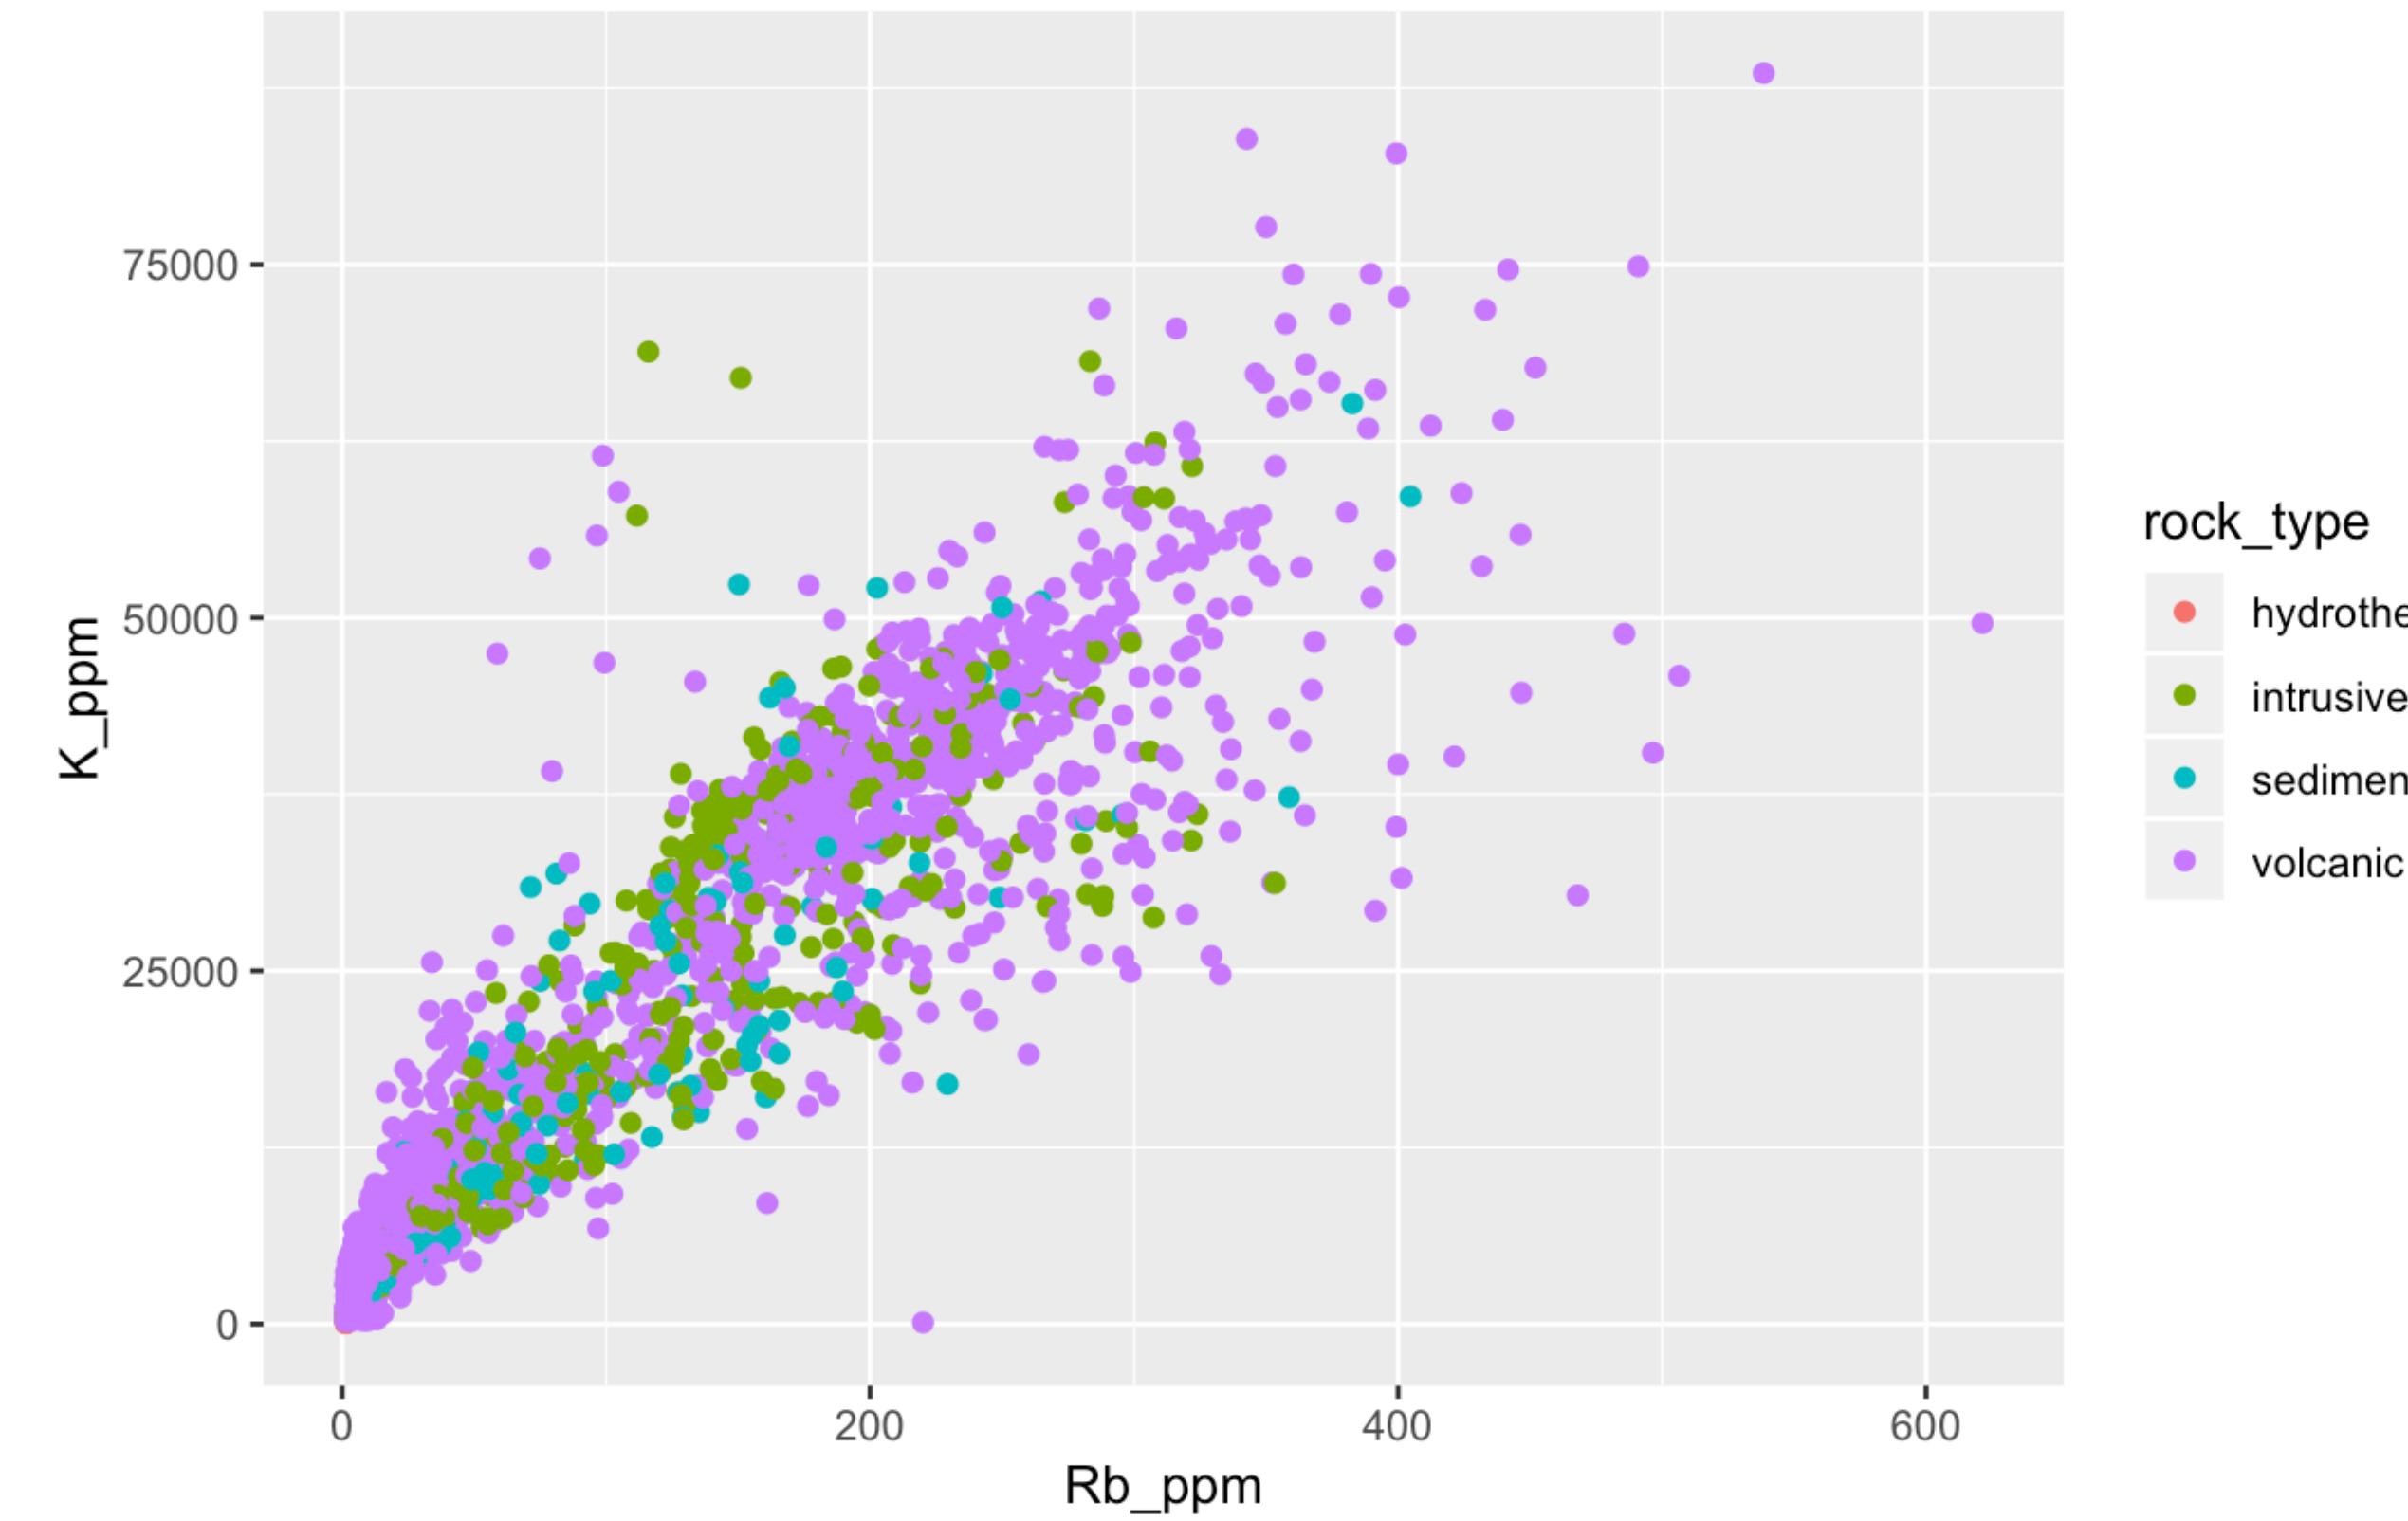

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm, color = rock_type))
```

**Outside of aes():** sets an aesthetic to a value

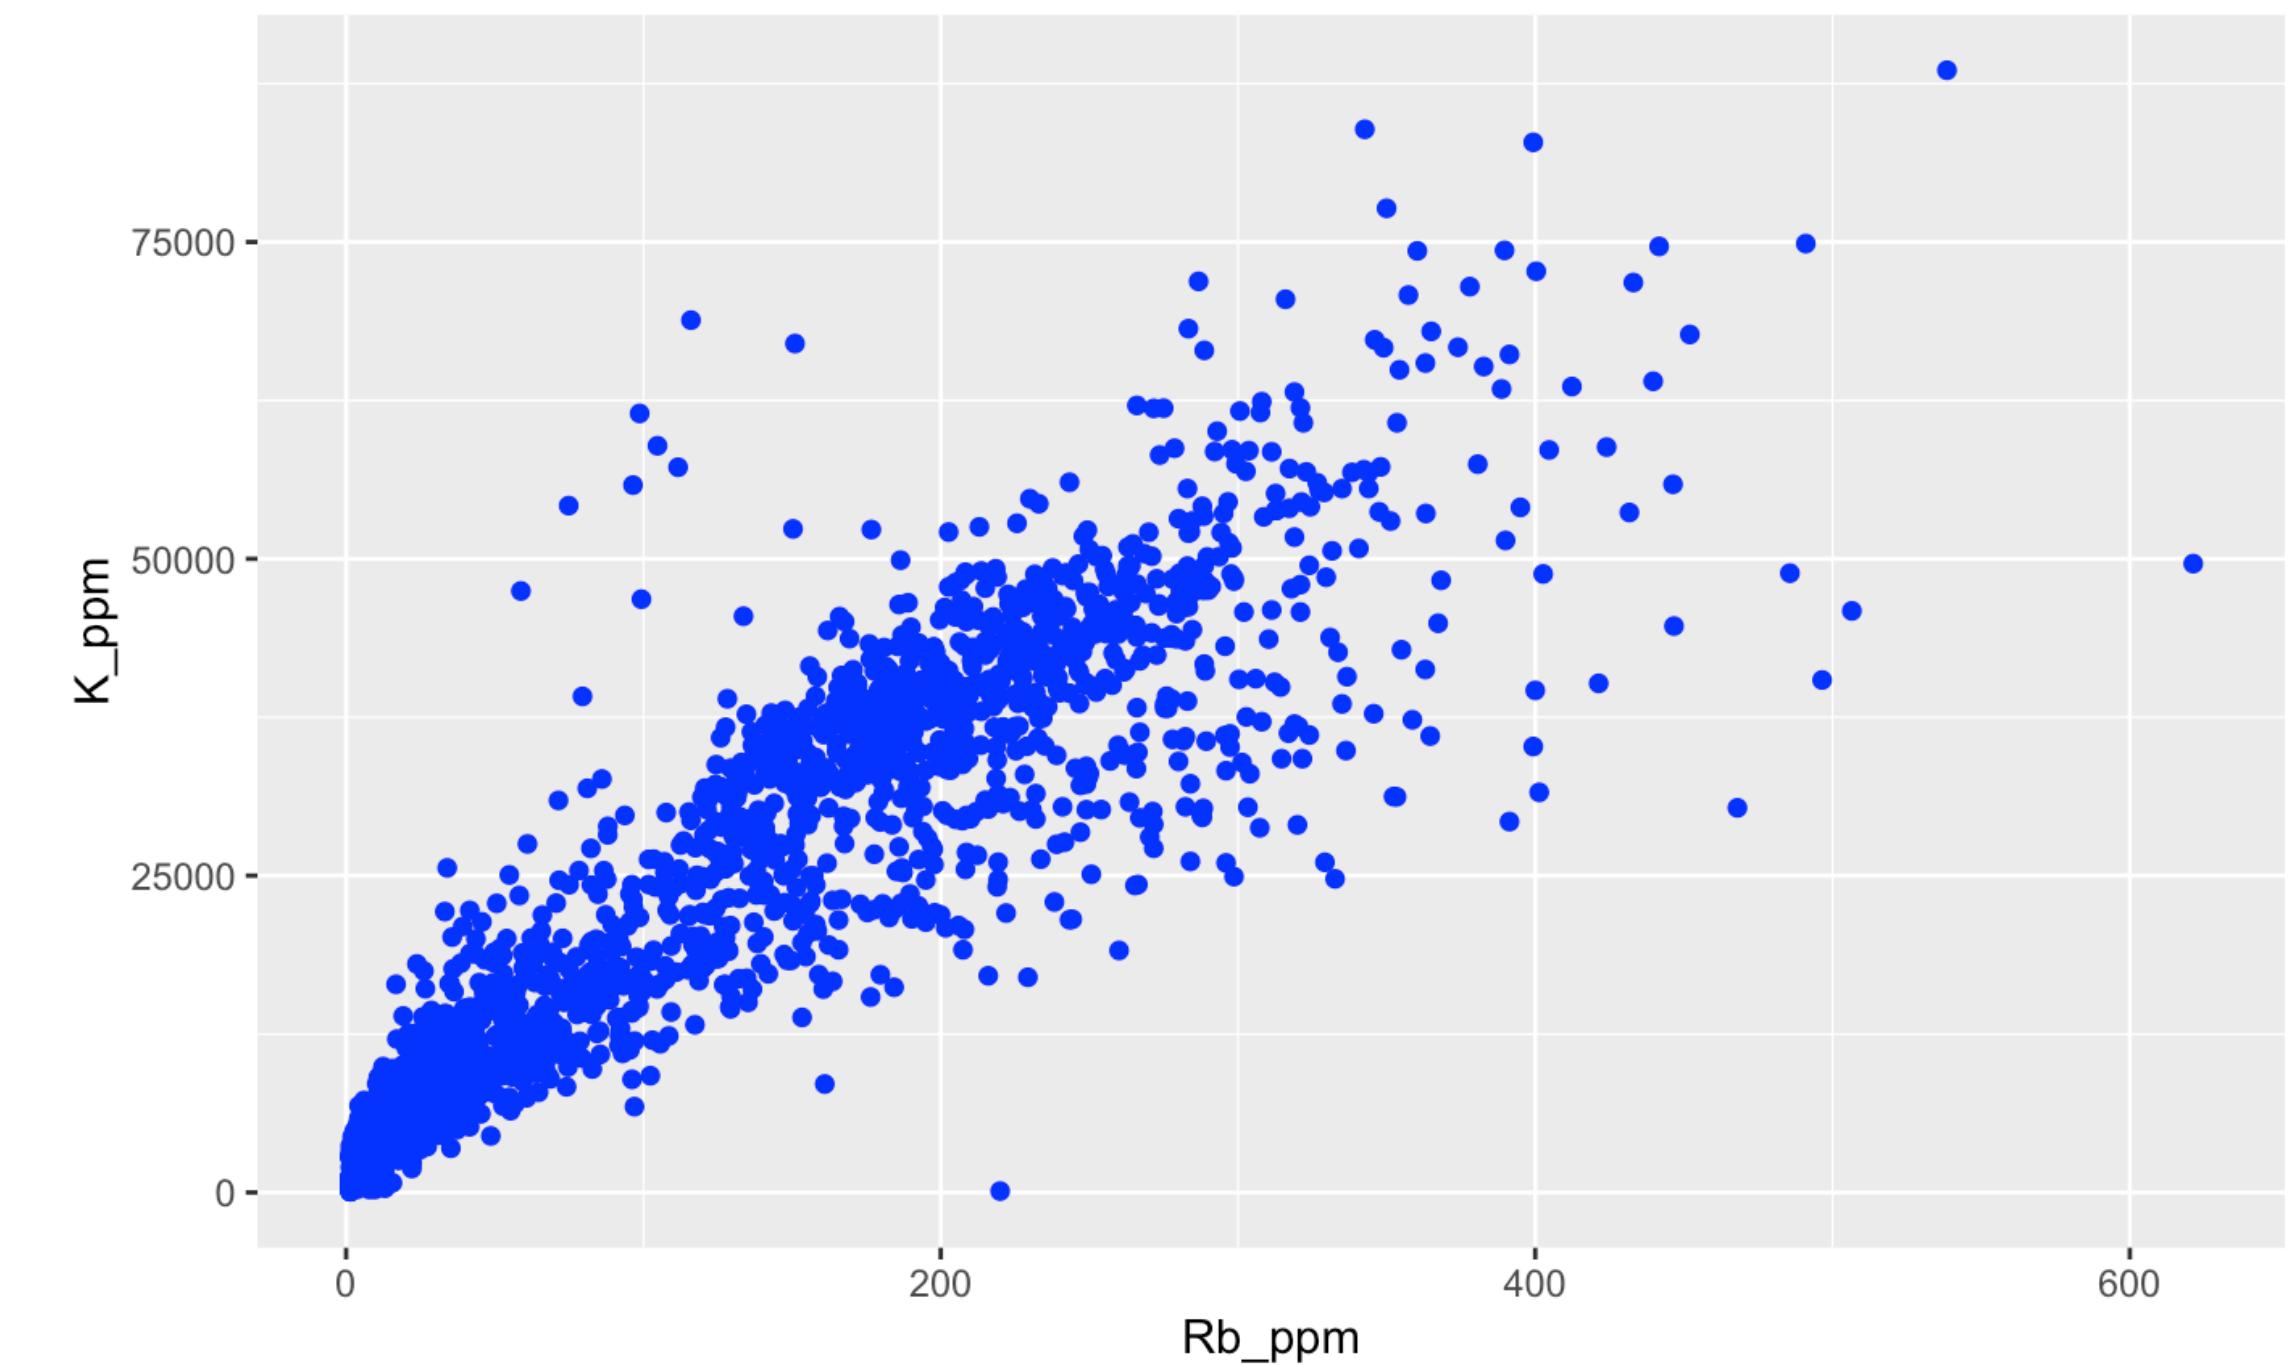

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm, color = rock_type))
```

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm), color = "blue")
```

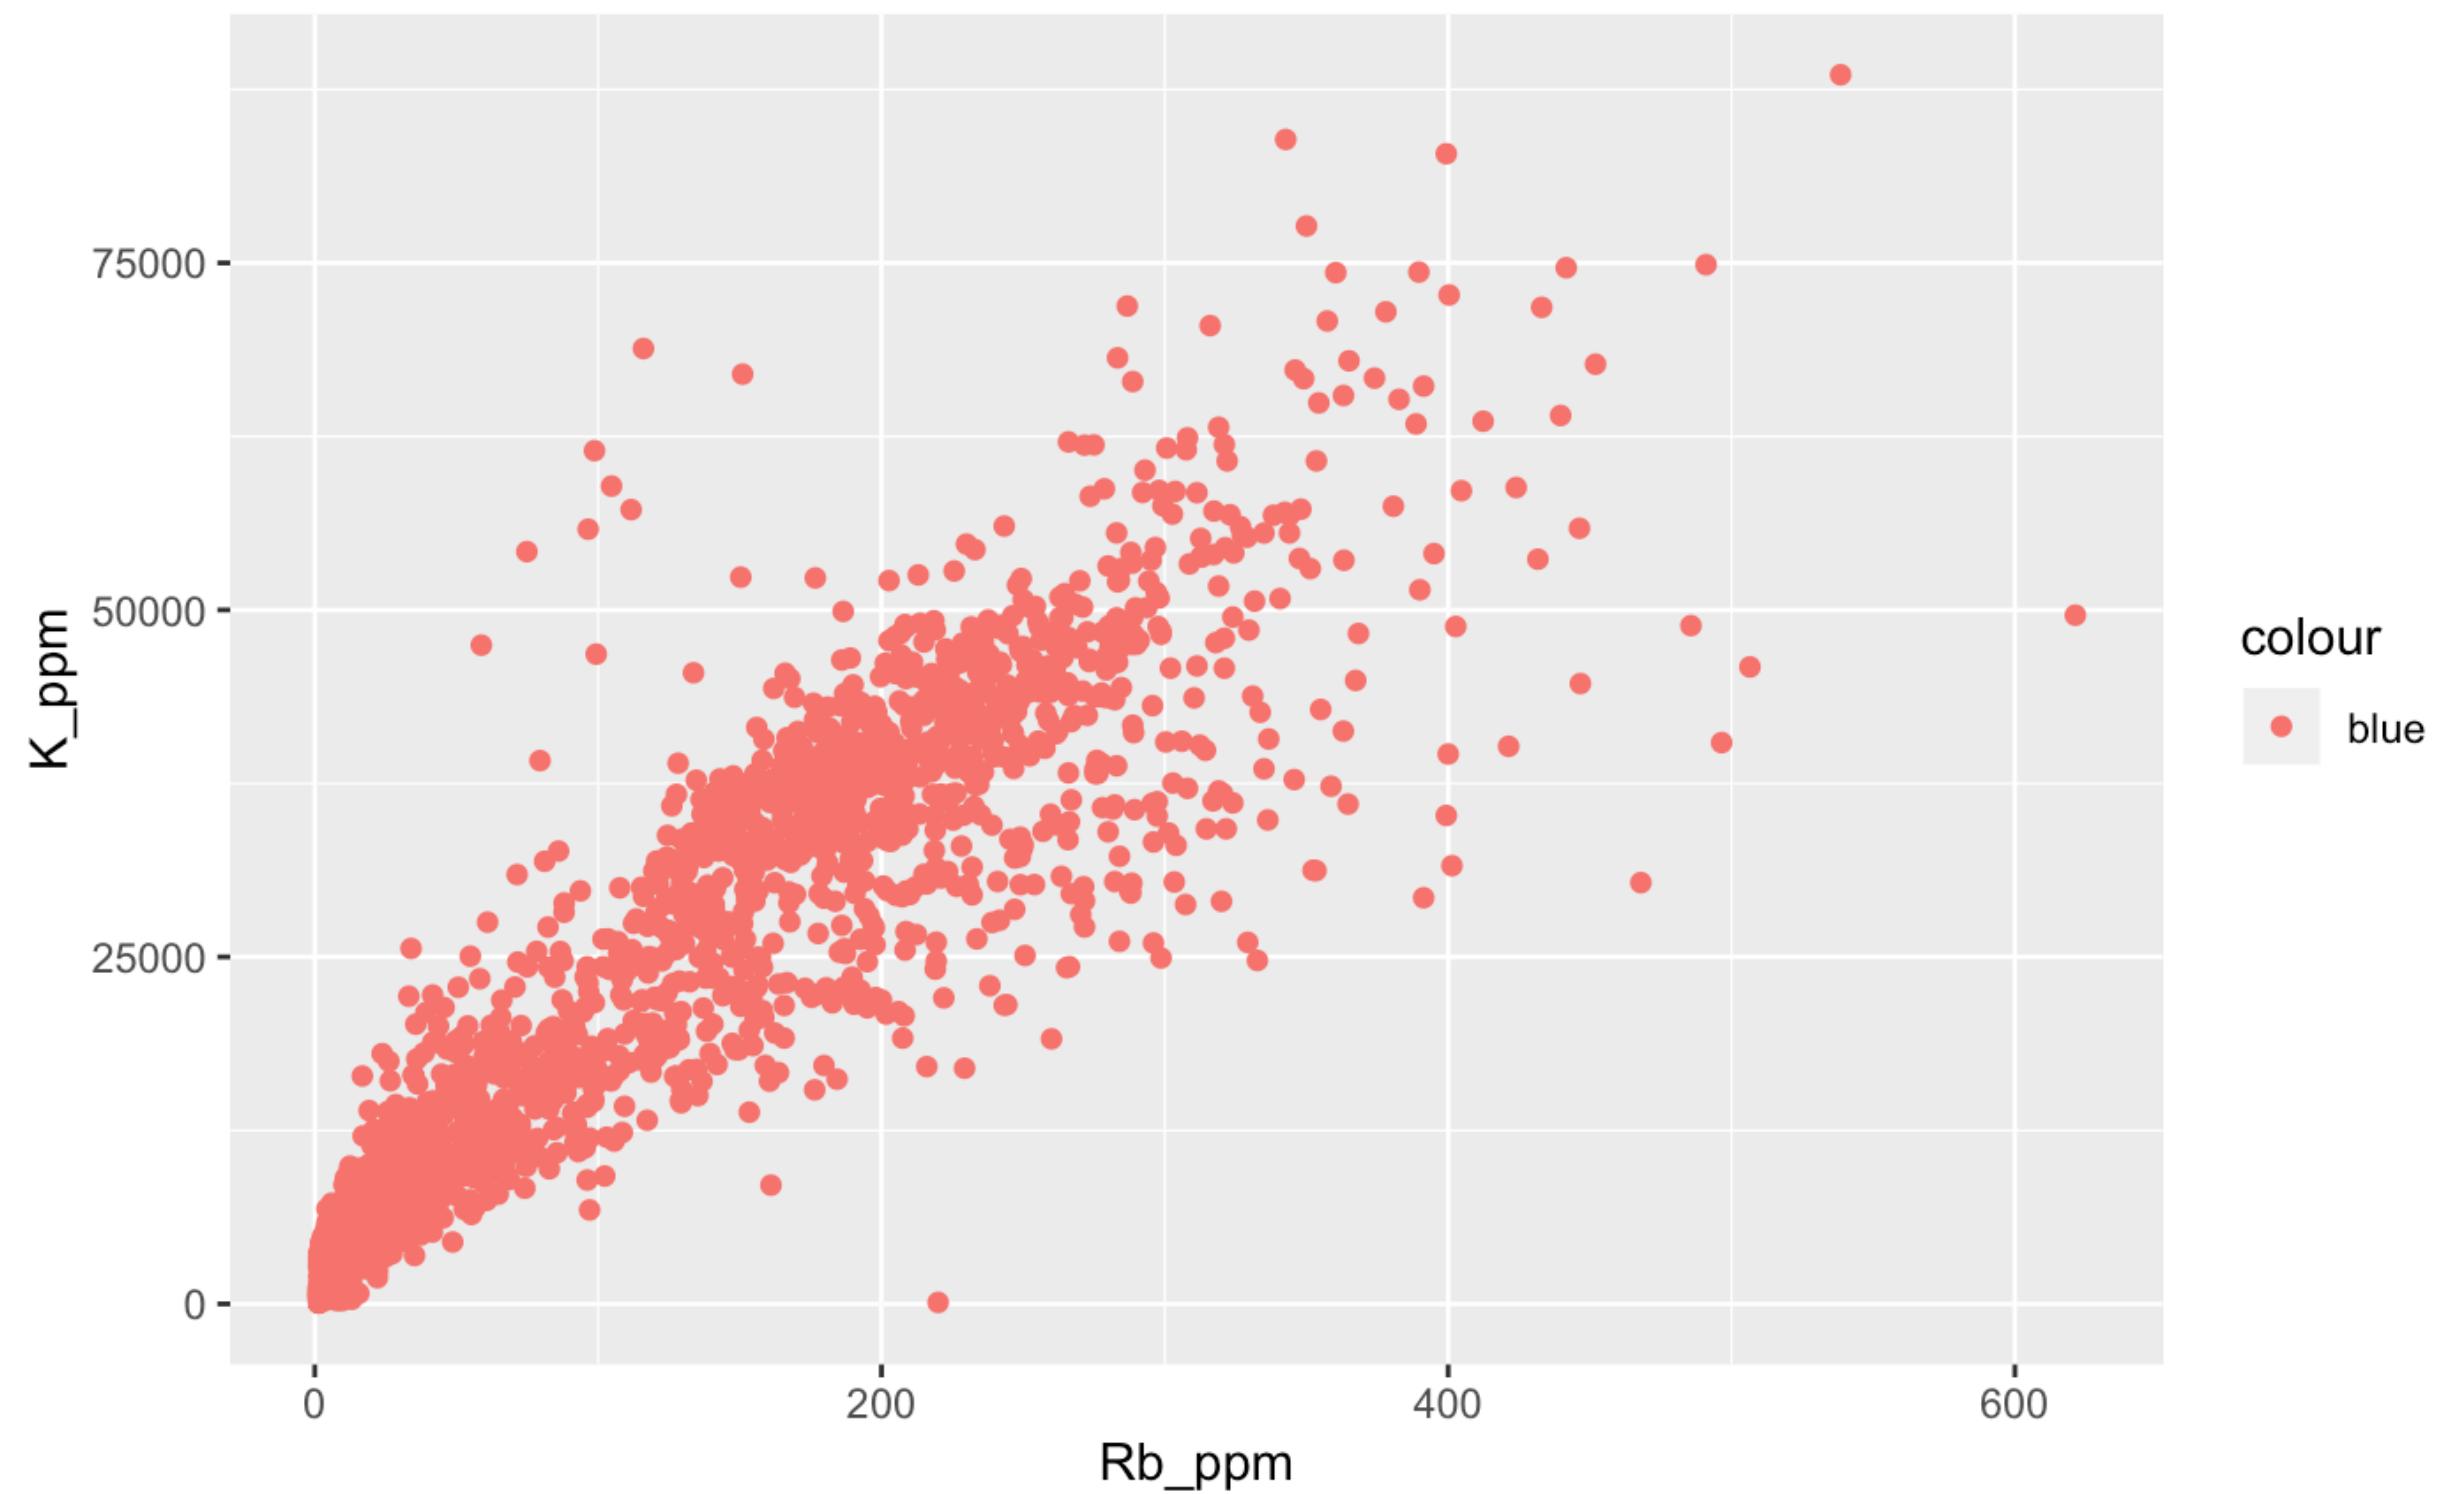

rock\_type

- hydrothermal
- intrusive
- sedimentary
- volcanic

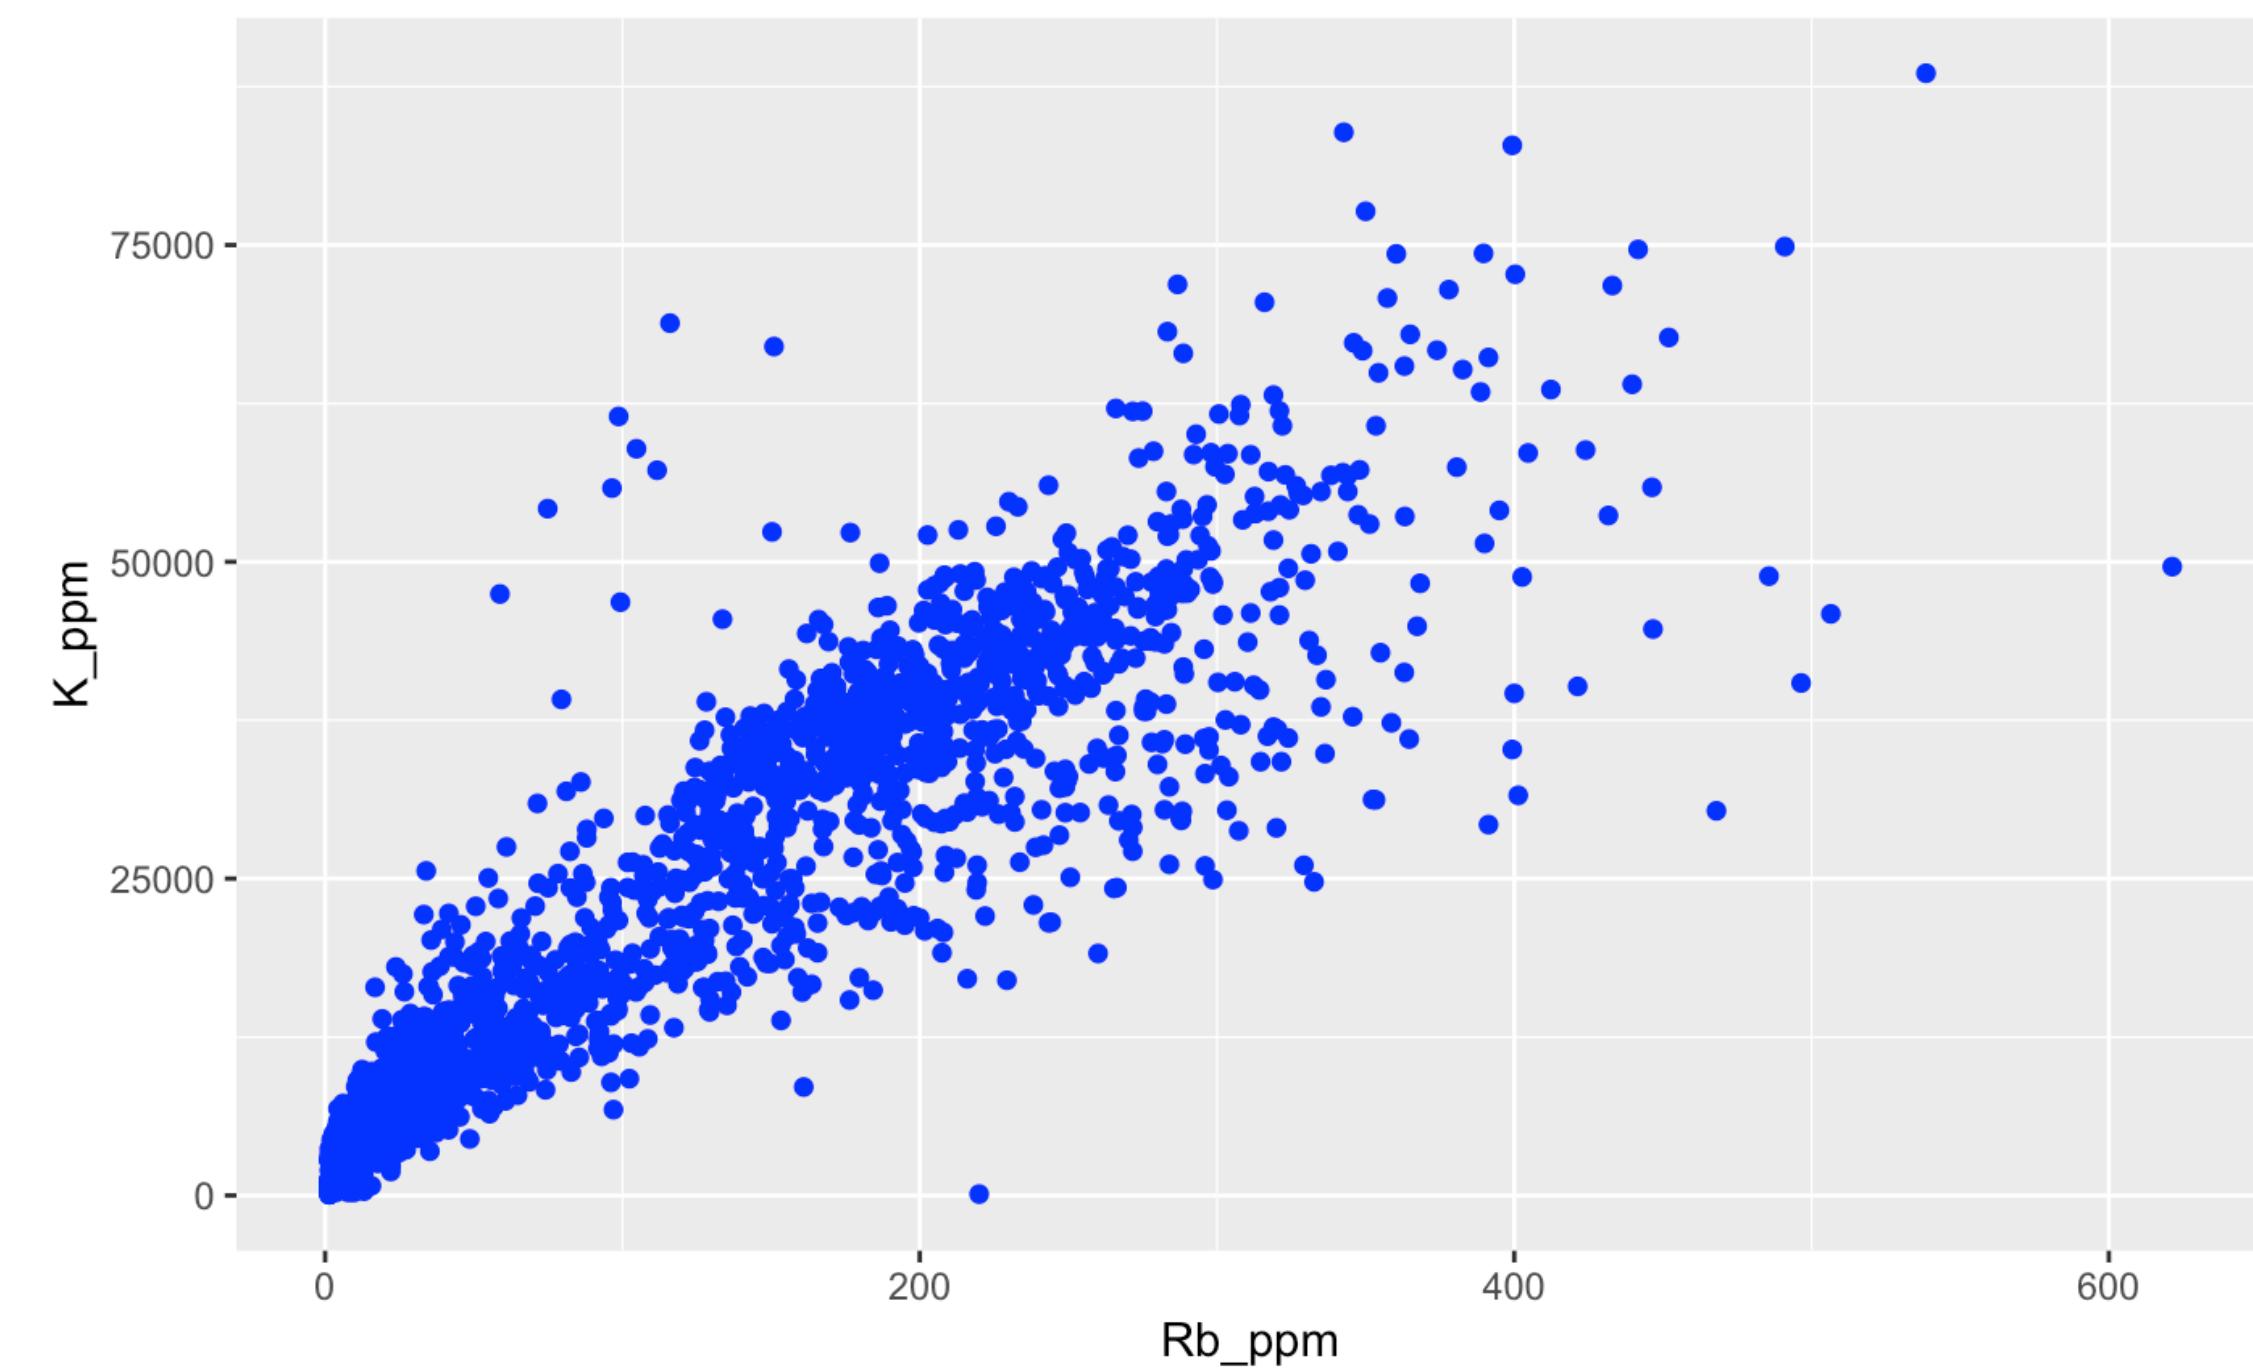

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm, color = rock_type))
```

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm), color = "blue")
```

colour  
● blue

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm, color = "blue"))
```

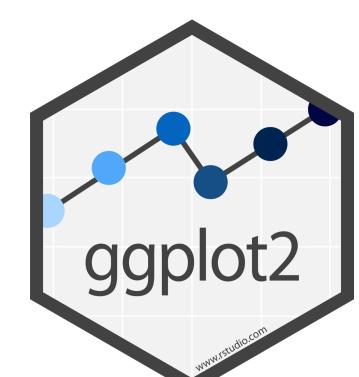

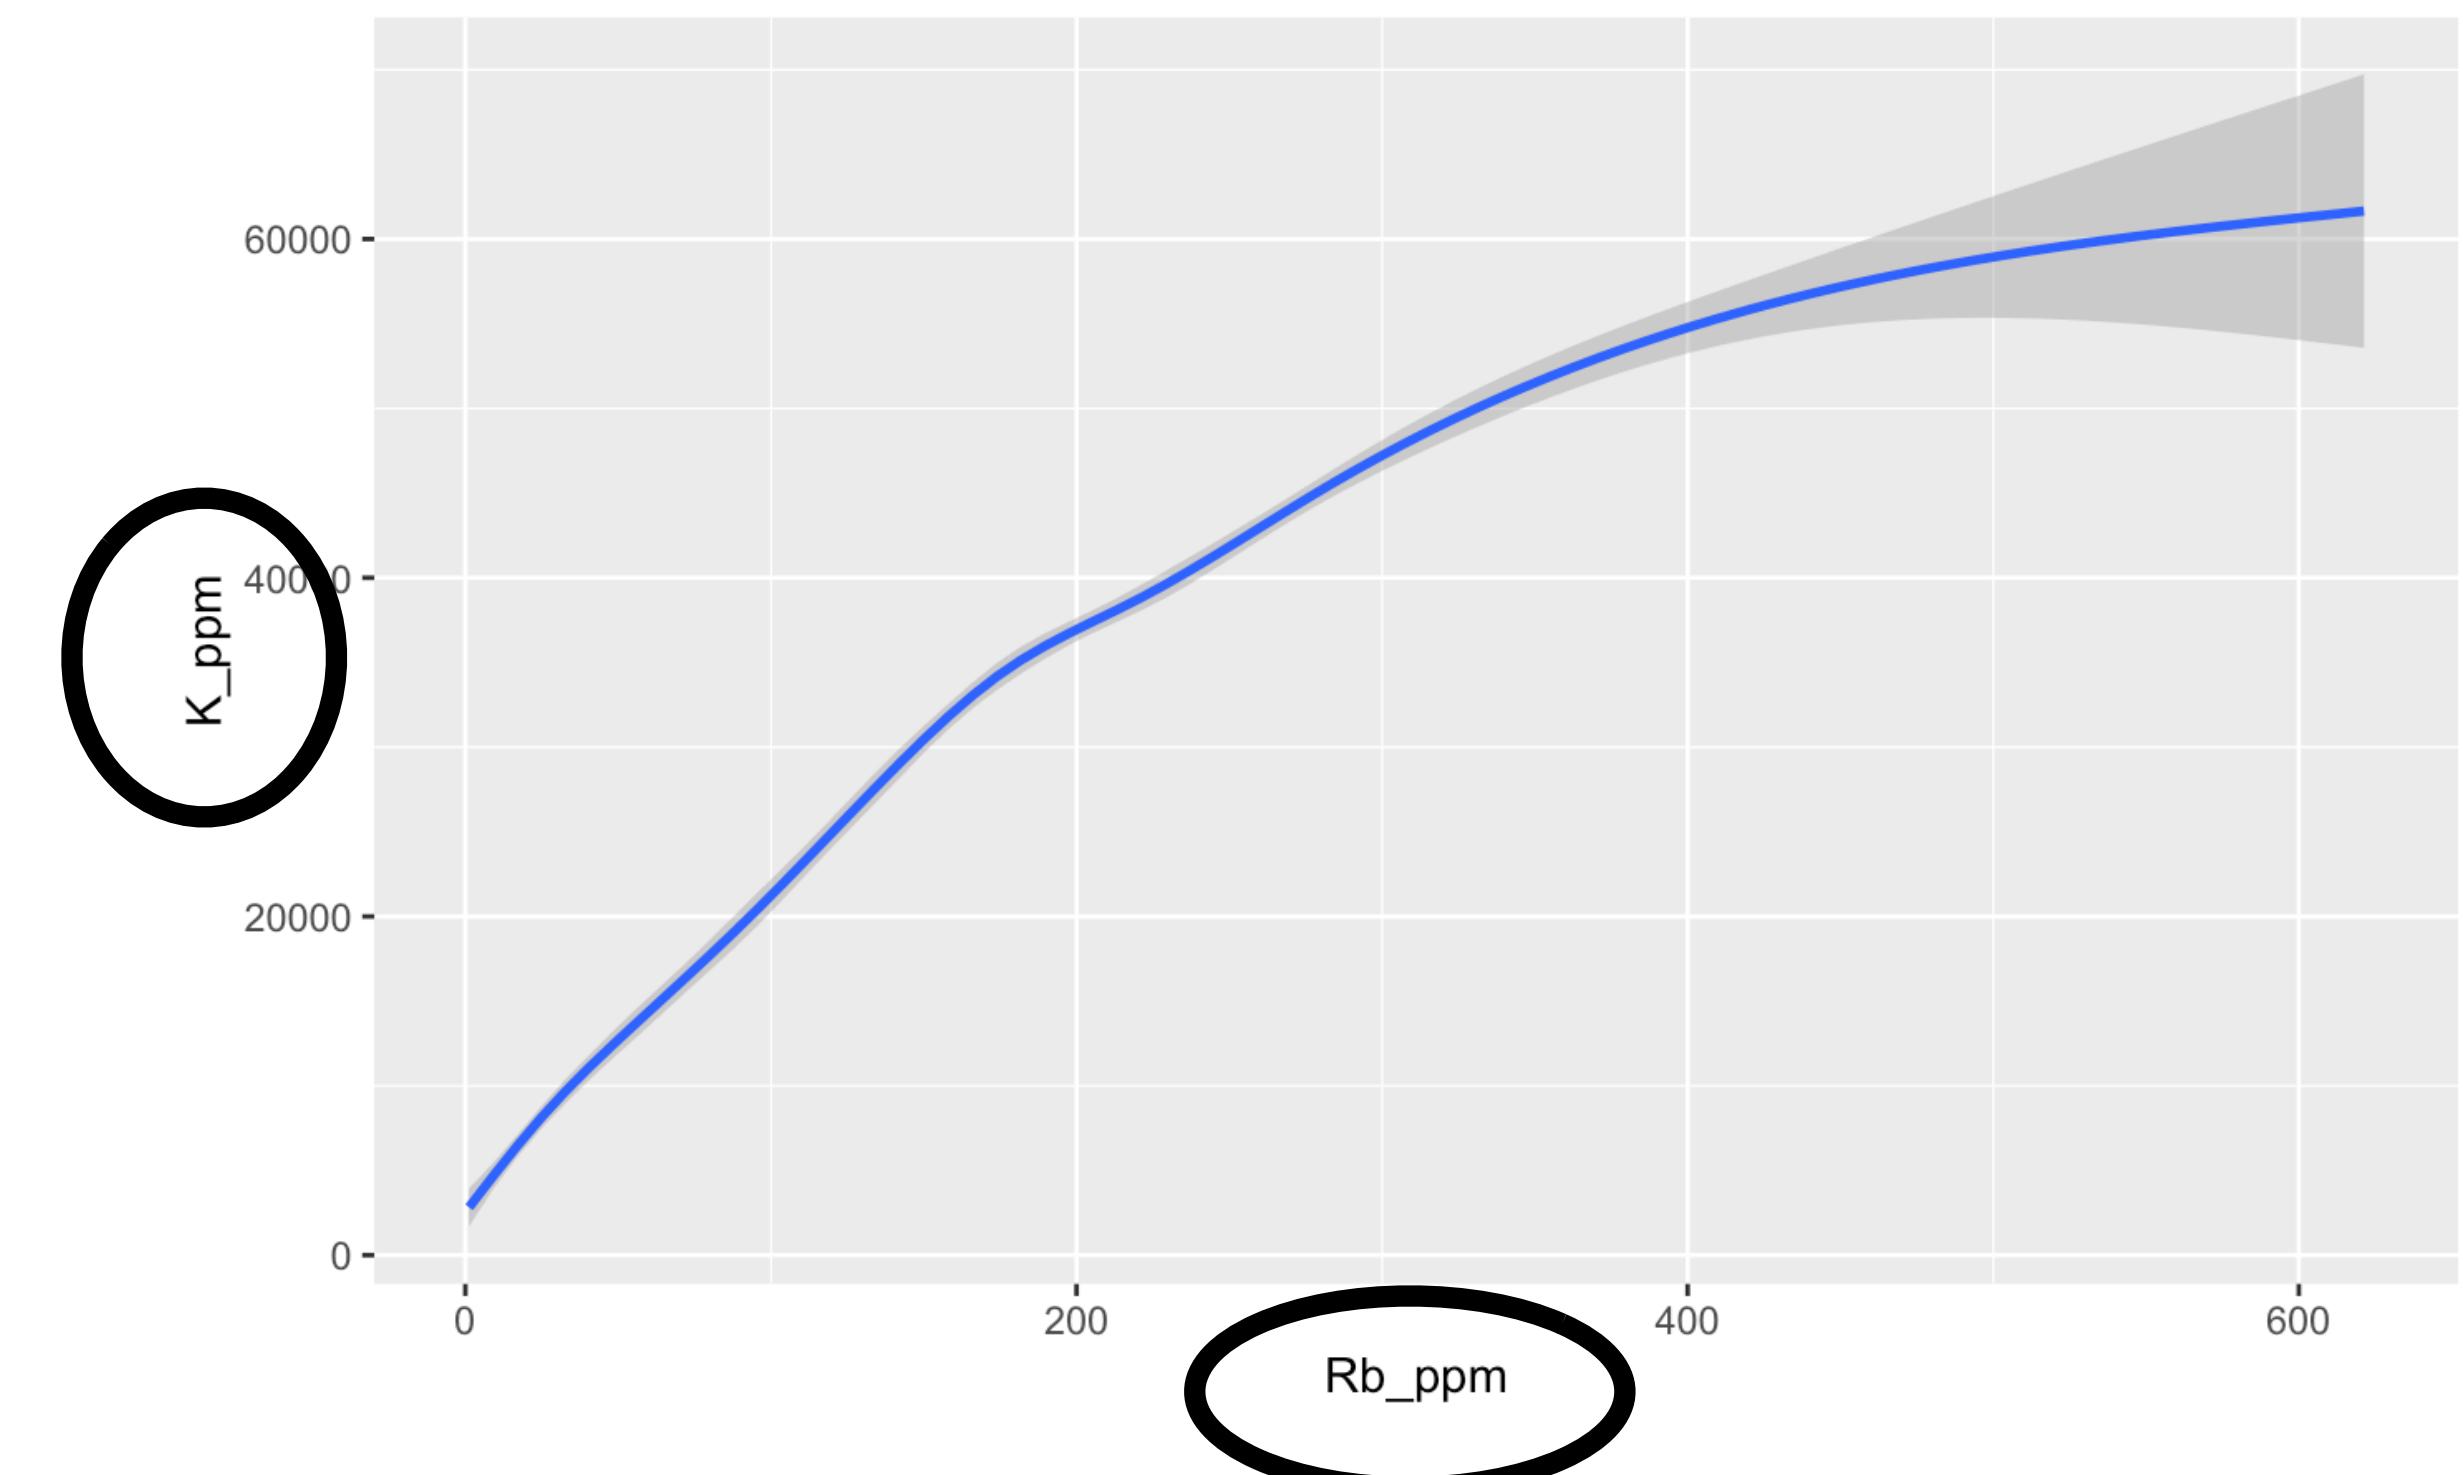

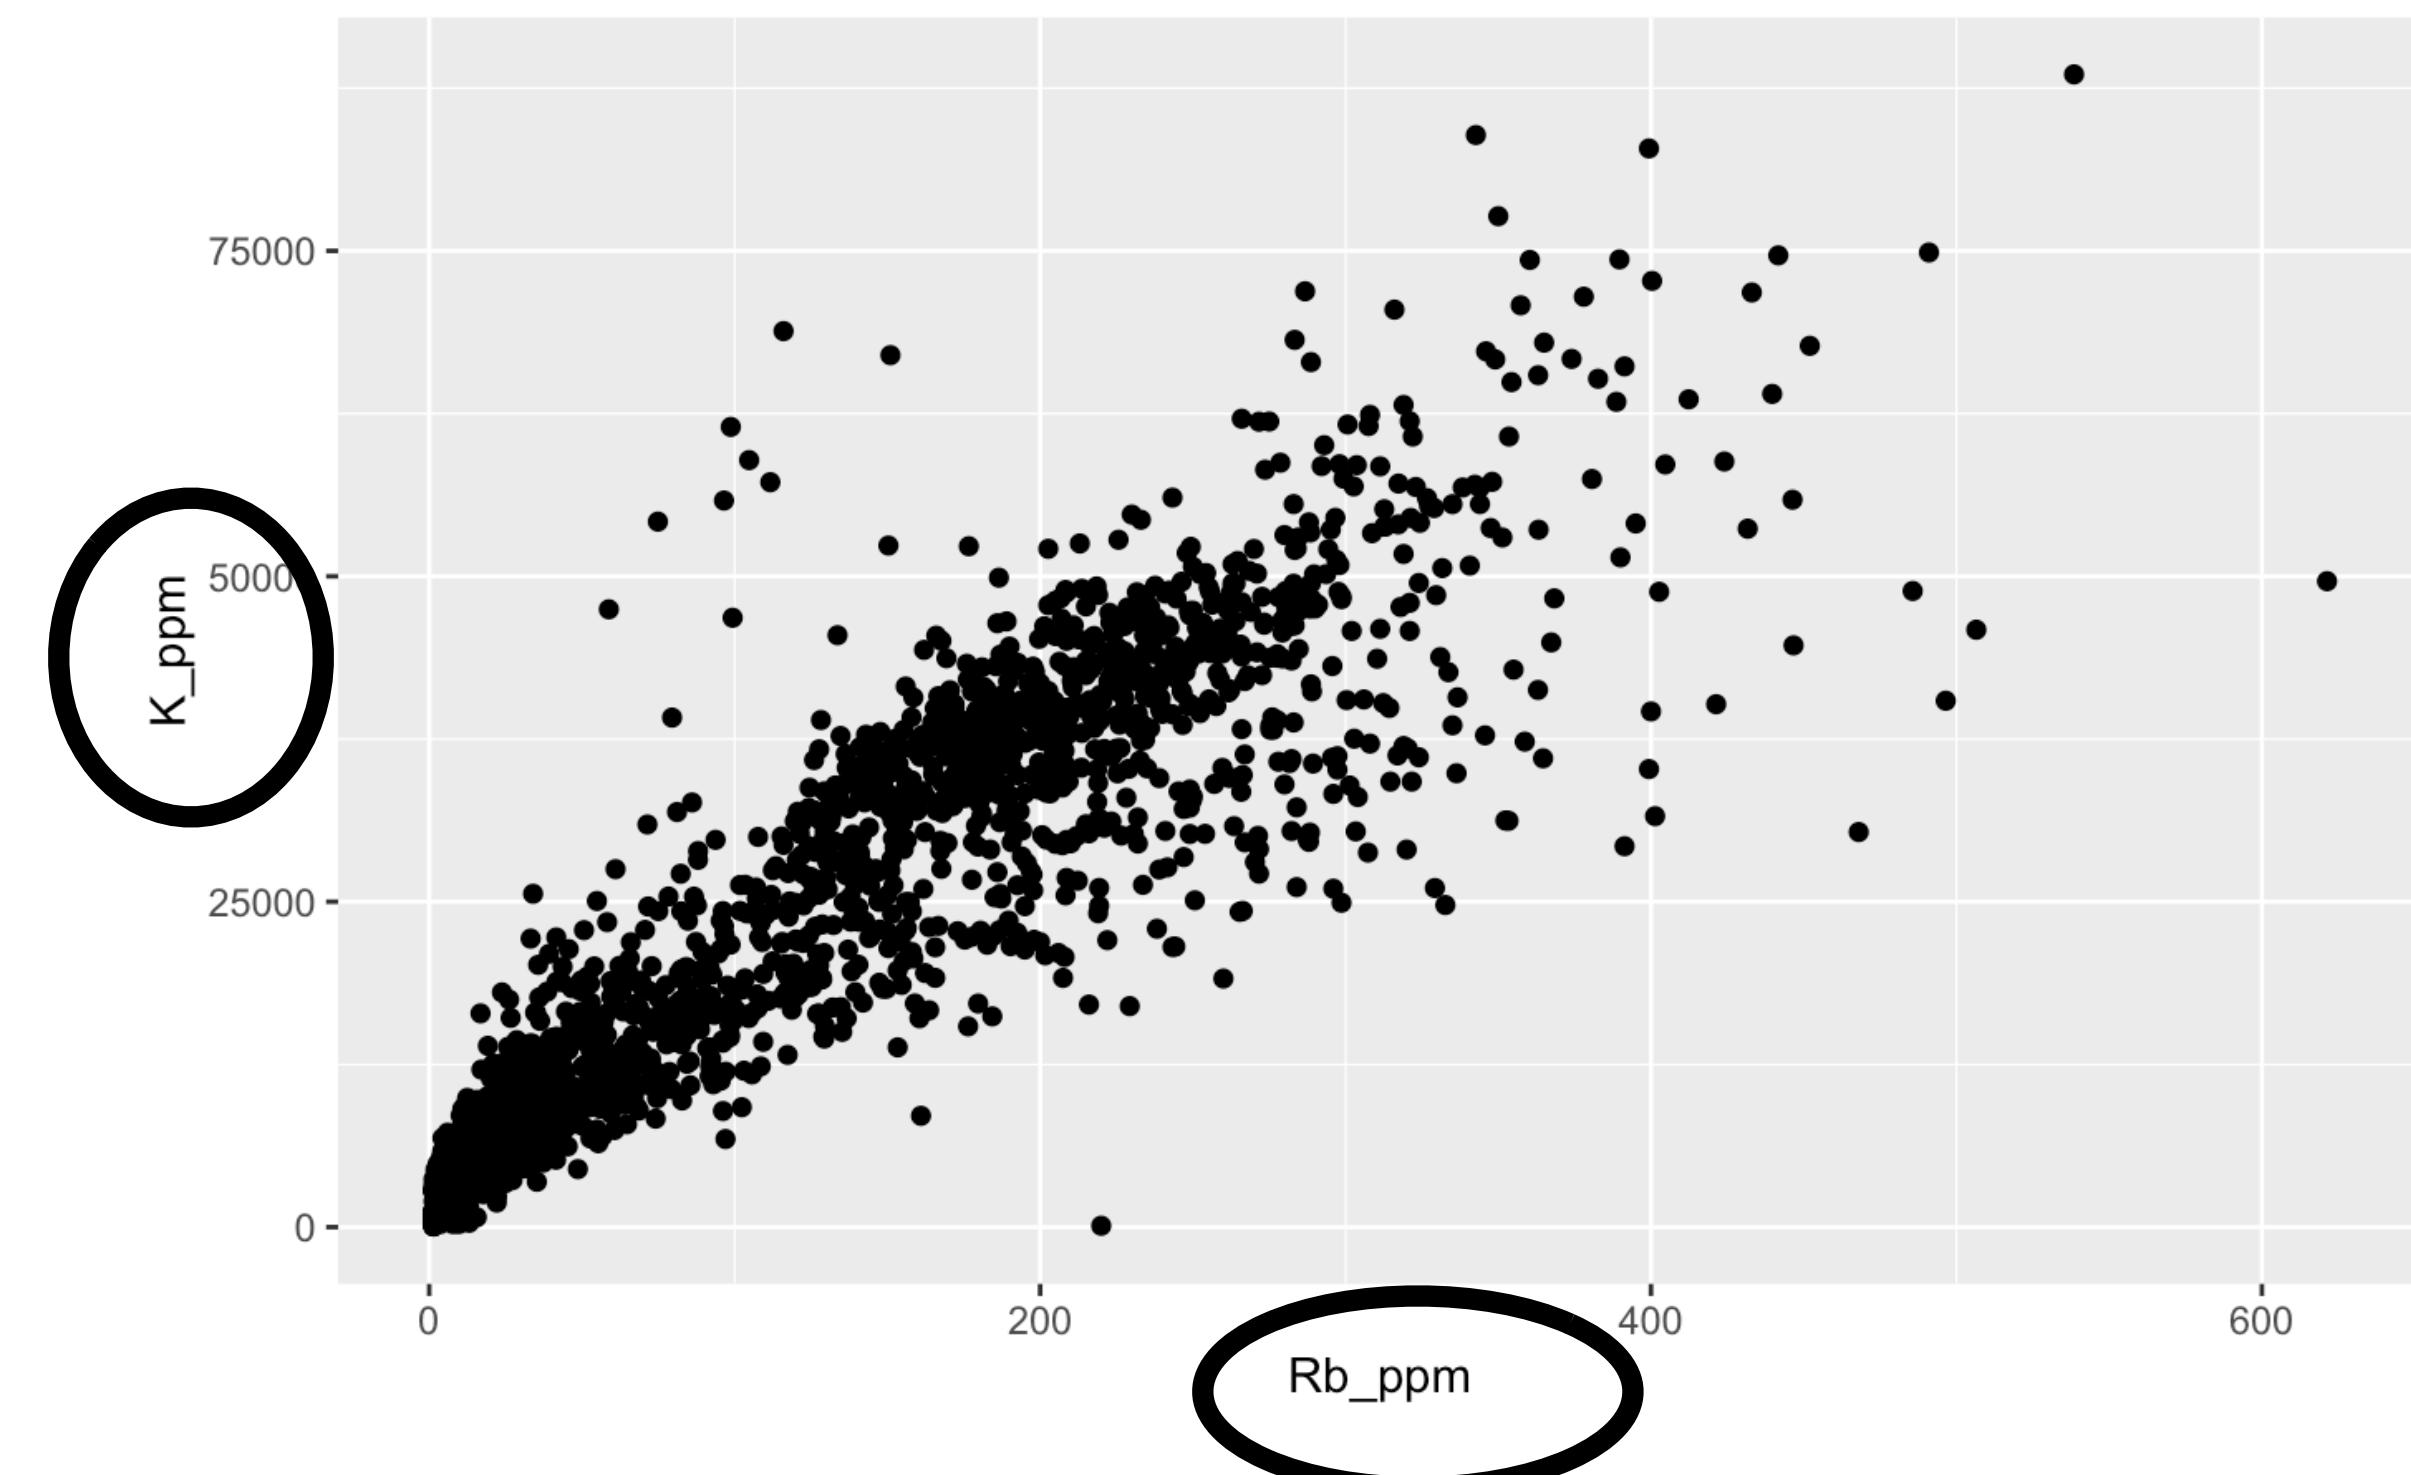

```
ggplot(warwick) + geom_point(aes(x = Rb_ppm, y = K_ppm), color = "blue")
```

# Geoms

R

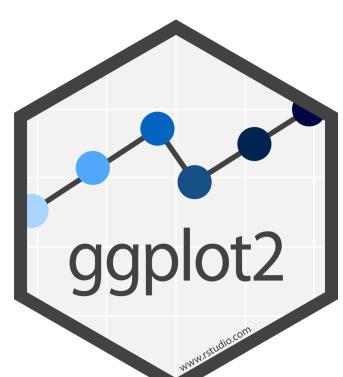

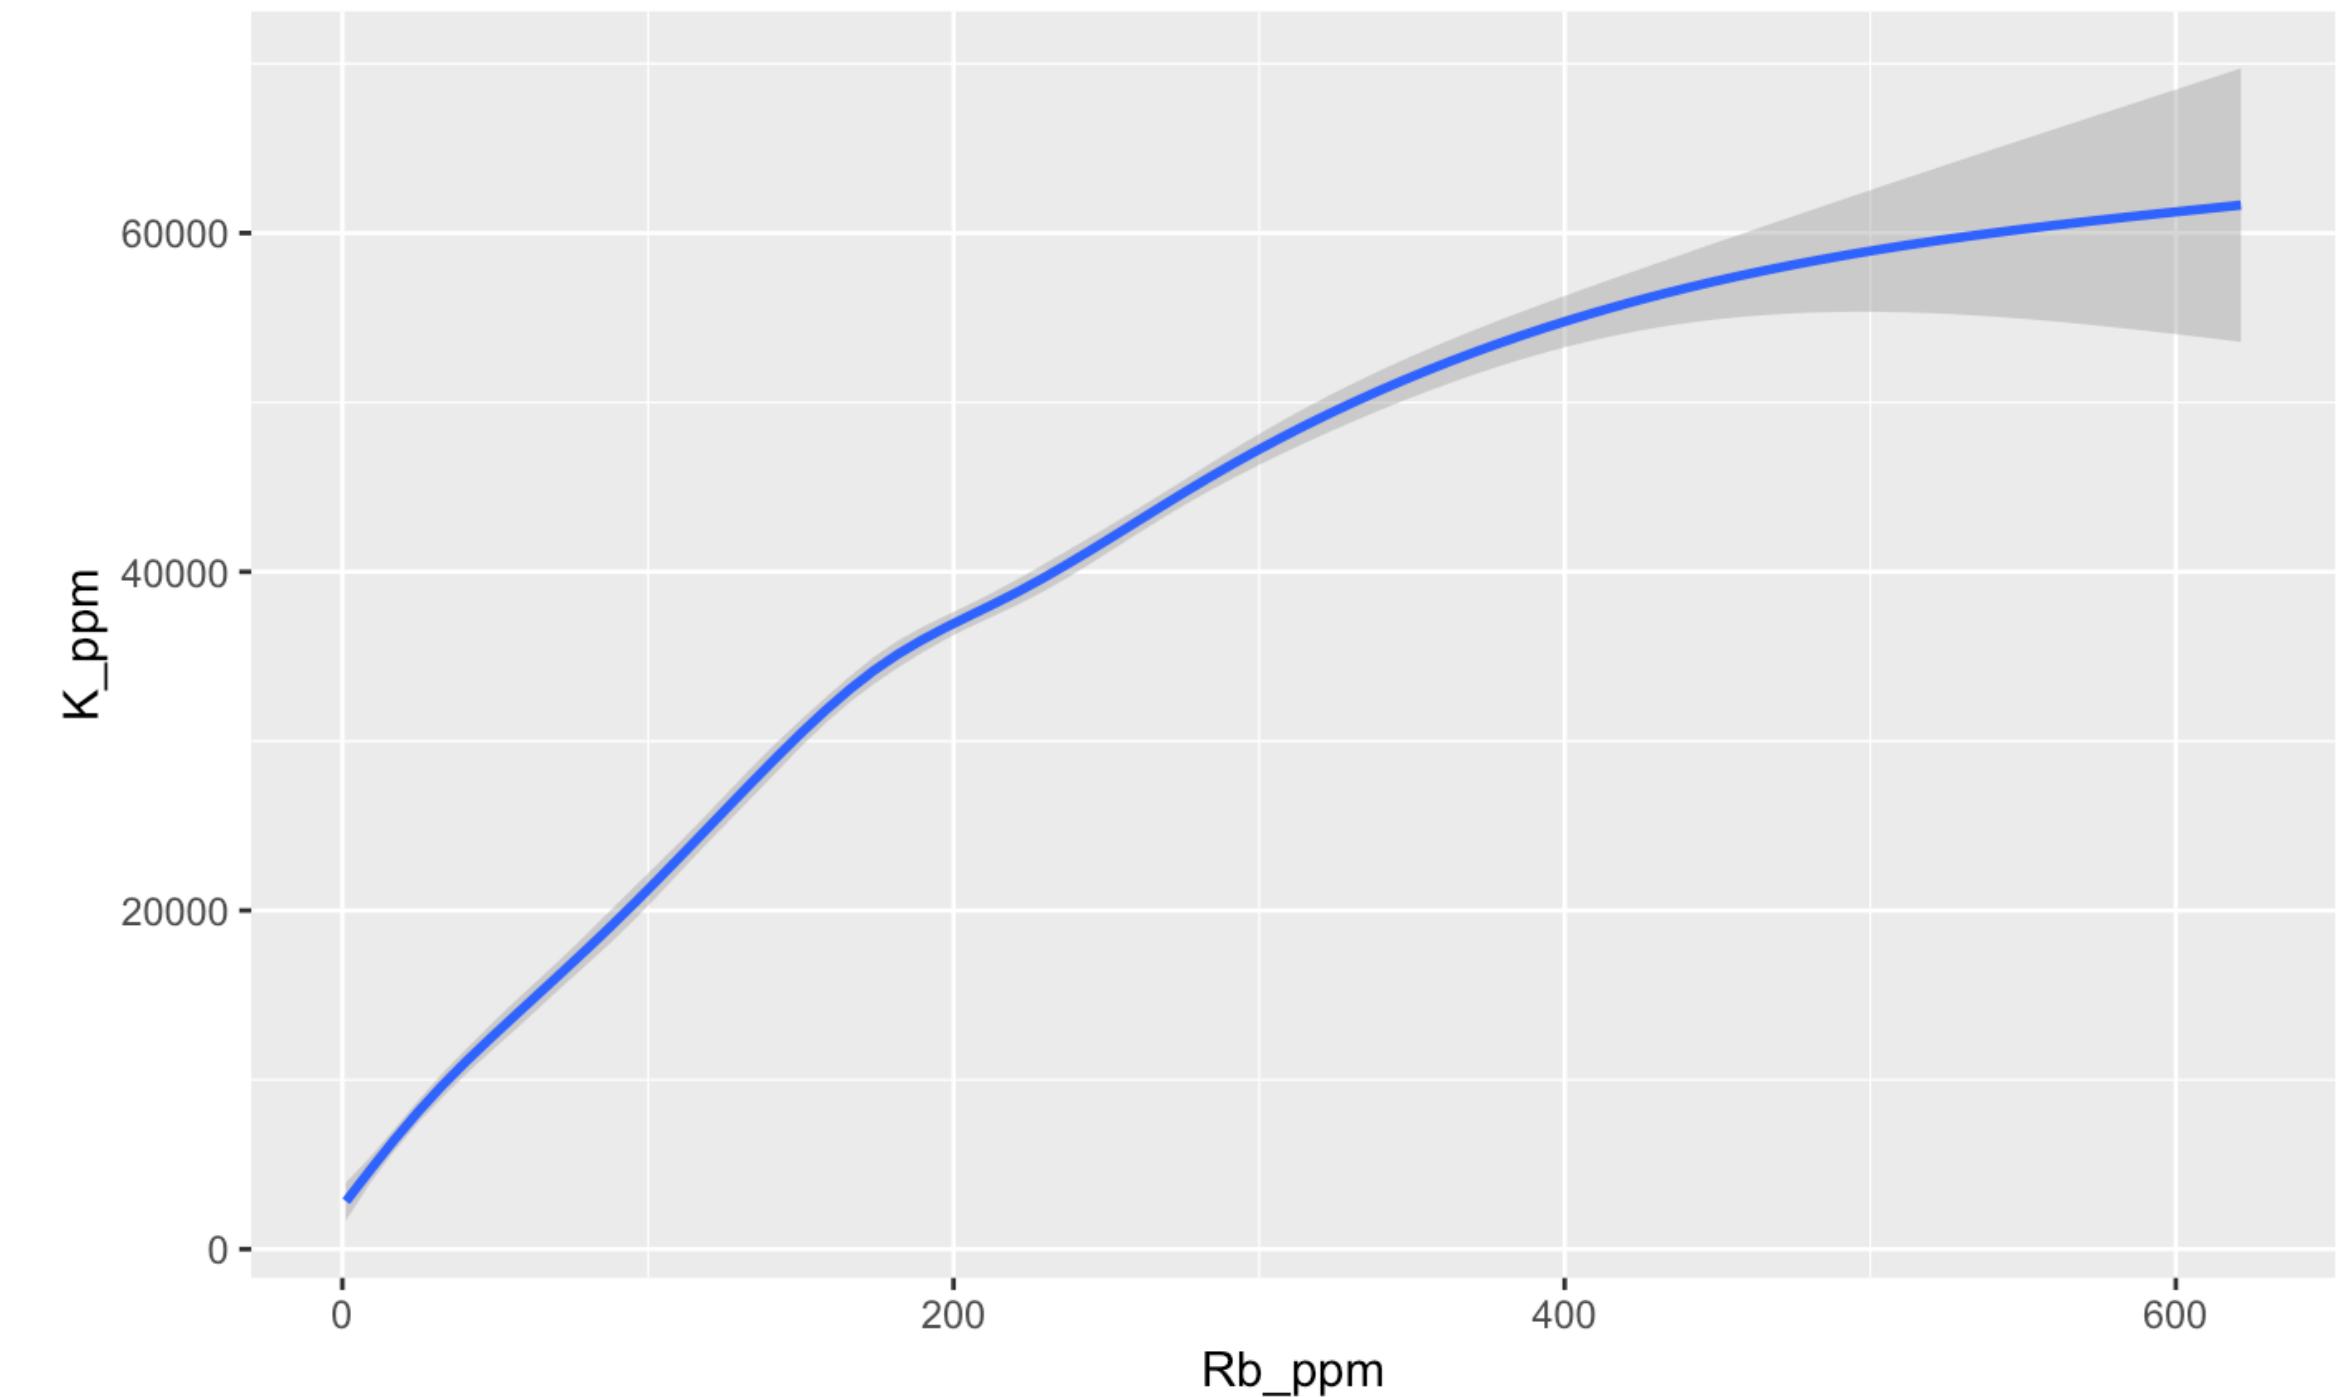

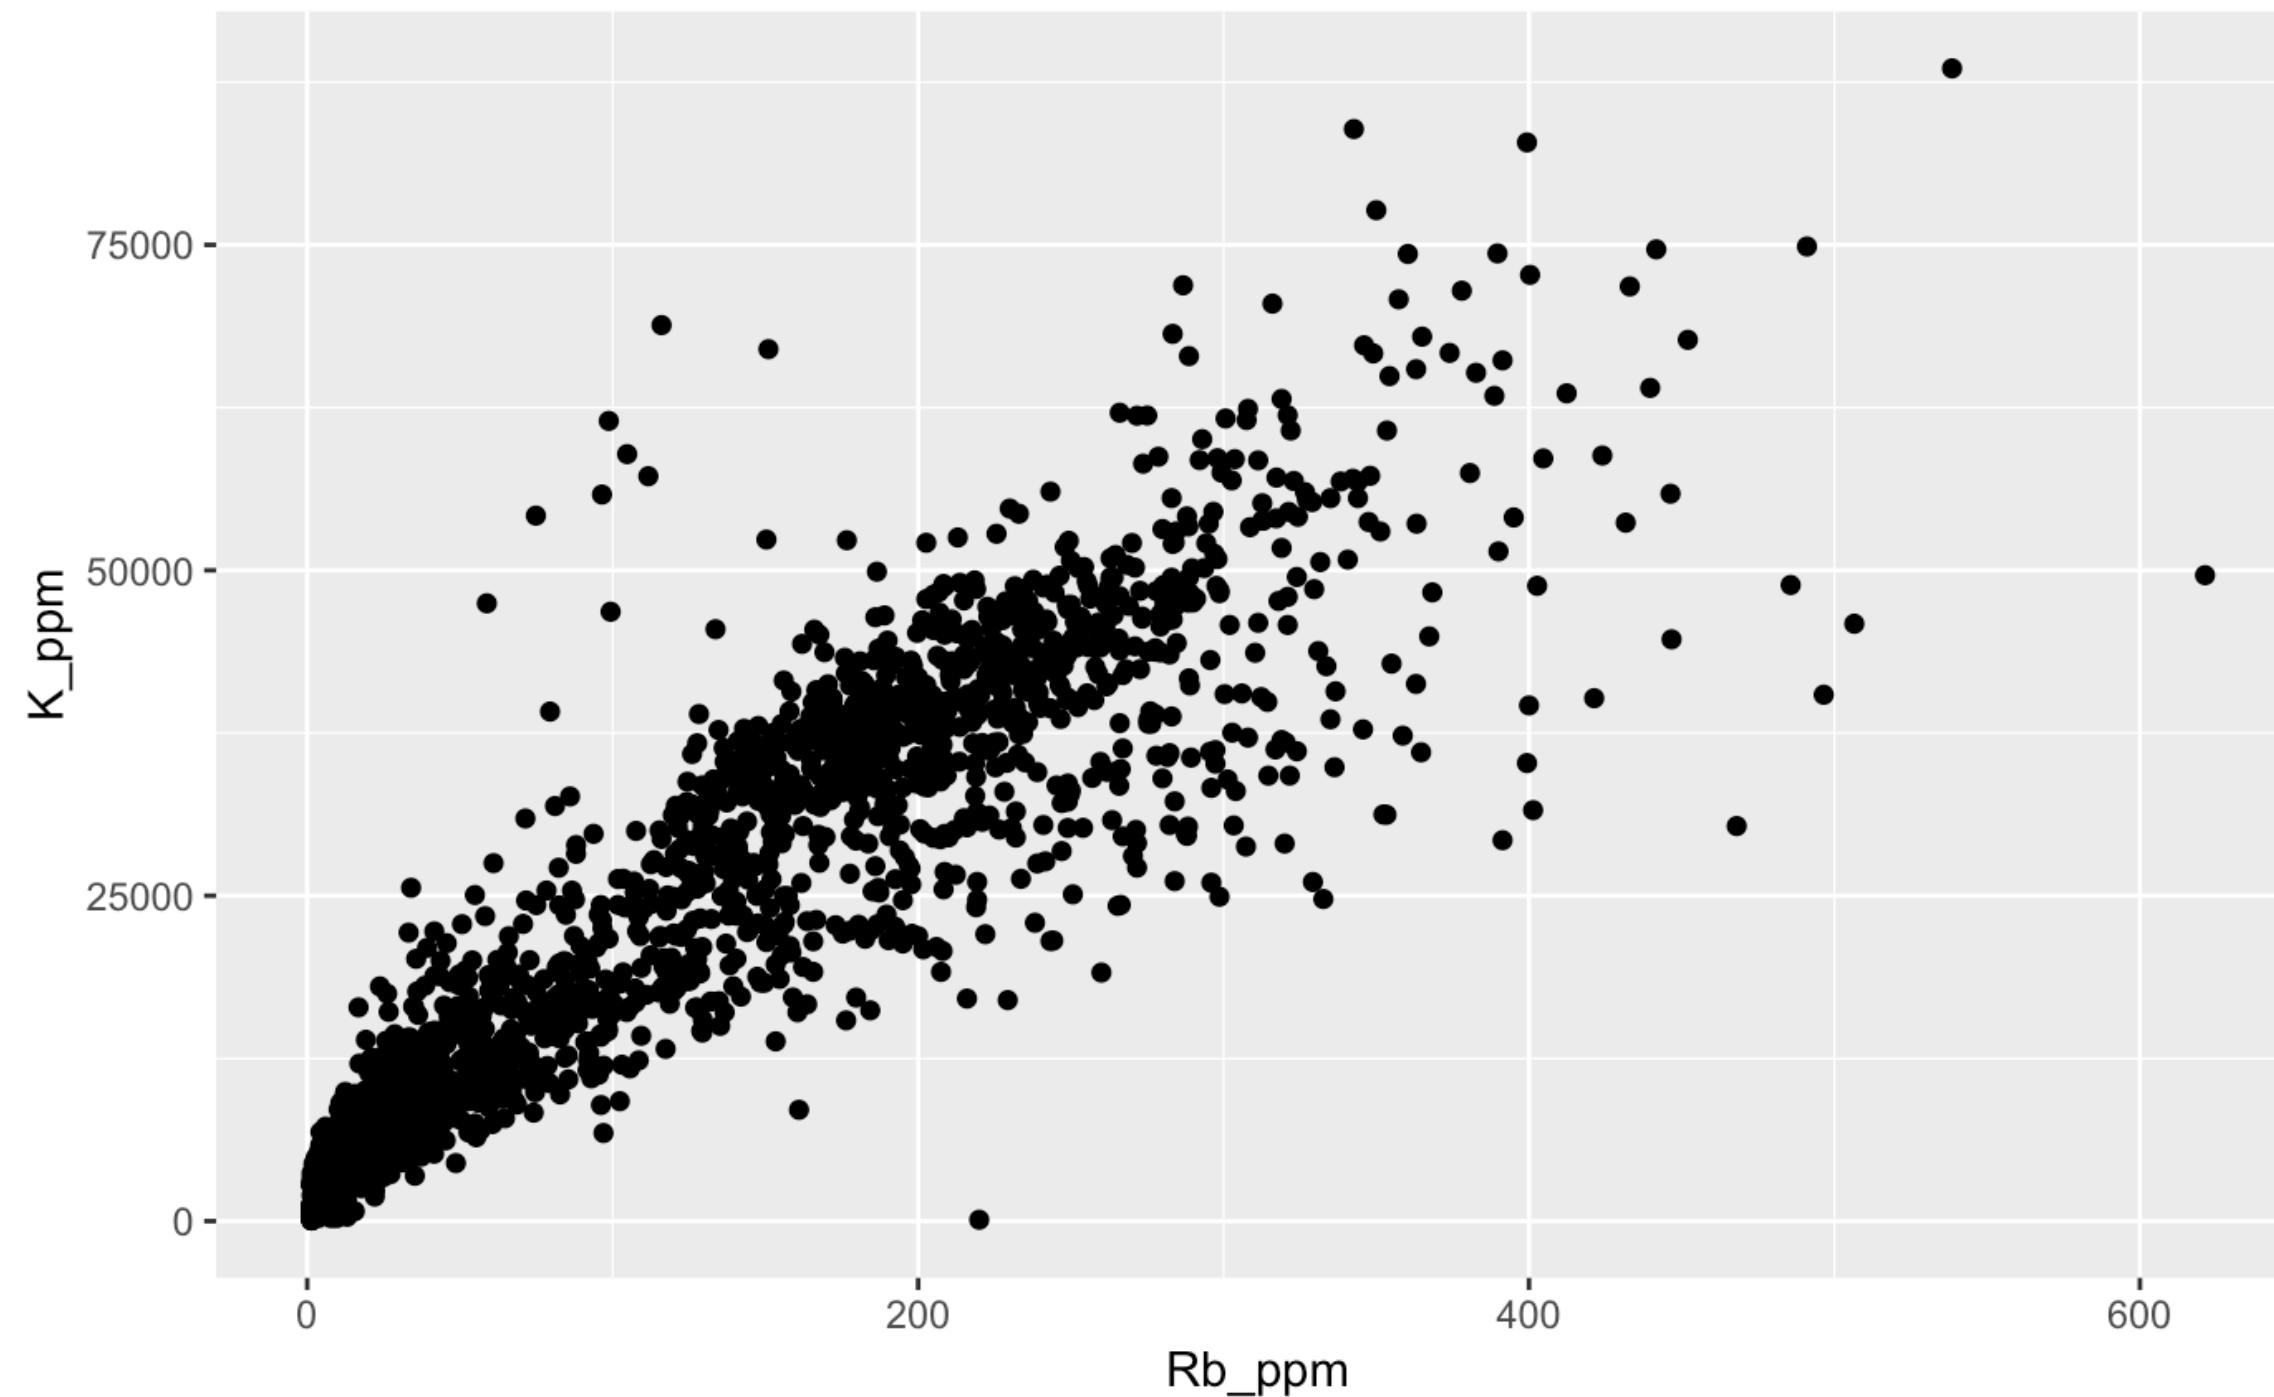

How are these plots similar?

Same: x var , y var , data

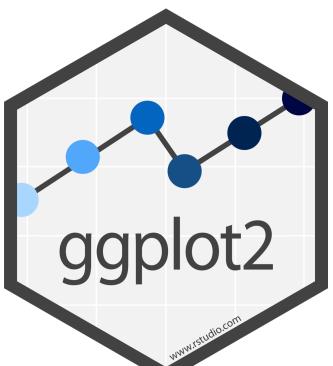

How are these plots different?

Different: geometric object (geom),  
e.g. the visual object used to represent the data

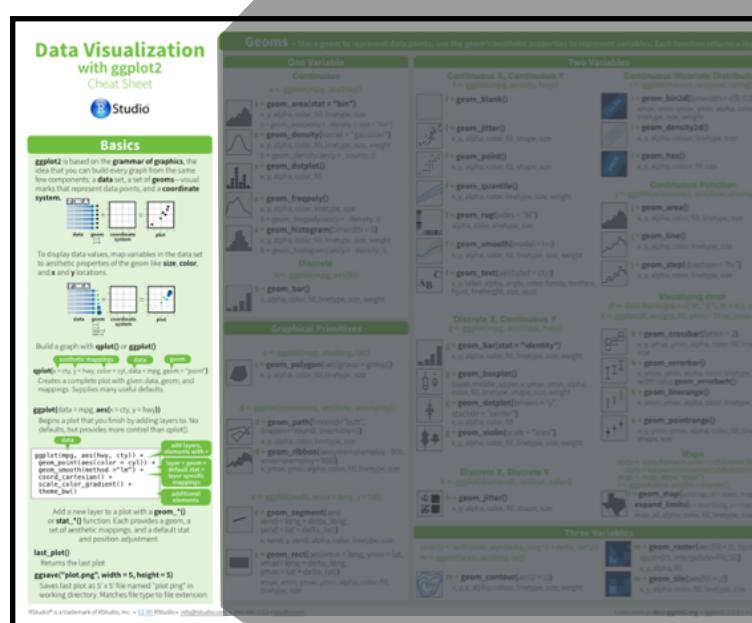

# geoms

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

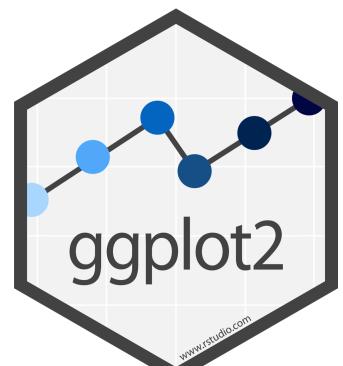

# geom\_ functions

Each requires a mapping argument.

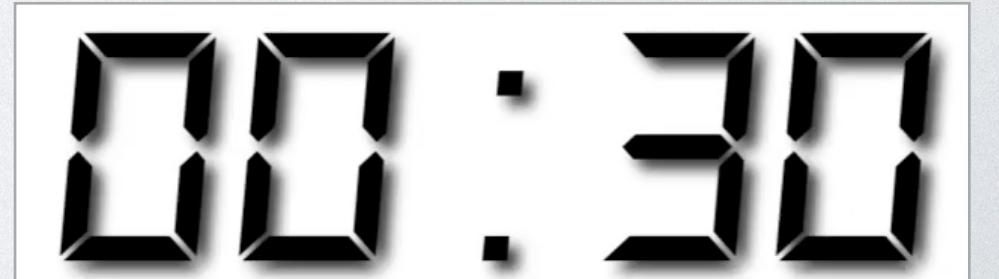

Geoms - Use a geom to represent data points, use the geom's aesthetic properties to represent variables. Each function returns a layer.	
<b>One Variable</b> <ul style="list-style-type: none"> <li><b>Continuous</b> <pre>a &lt;- ggplot(mpg, aes(hwy))</pre> <pre>a + geom_area(stat = "bin")</pre> <pre>a + geom_density(kernel = "gaussian")</pre> <pre>a + geom_dotplot()</pre> <pre>a + geom_freqpoly()</pre> <pre>a + geom_histogram(binwidth = 5)</pre> </li> <li><b>Discrete</b> <pre>b &lt;- ggplot(mpg, aes(fl))</pre> <pre>b + geom_bar()</pre> </li> </ul>	<b>Two Variables</b> <ul style="list-style-type: none"> <li><b>Continuous X, Continuous Y</b> <pre>f &lt;- ggplot(mpg, aes(cty, hwy))</pre> <pre>f + geom_blank()</pre> <pre>f + geom_jitter()</pre> </li> <li><b>Continuous Function</b> <pre>j &lt;- ggplot(economics, aes(date, unemploy))</pre> <pre>j + geom_area()</pre> <pre>j + geom_line()</pre> <pre>j + geom_step(direction = "hv")</pre> </li> <li><b>Continuous Bivariate Distribution</b> <pre>i &lt;- ggplot(movies, aes(year, rating))</pre> <pre>i + geom_bin2d(binwidth = c(5, 0.5))</pre> <pre>i + geom_hex()</pre> </li> <li><b>Visualizing error</b> <pre>df &lt;- data.frame(grp = c("A", "B"), fit = 4:5, se = 1:2)</pre> <pre>k &lt;- ggplot(df, aes(grp, fit, ymin = fit-se, ymax = fit+se))</pre> </li> <li><b>Maps</b> <pre>data &lt;- data.frame(murder = USArrests\$Murder, state = tolower(rownames(USArrests)))</pre> <pre>map &lt;- map_data("state")</pre> <pre>l &lt;- ggplot(data, aes(fill = murder))</pre> <pre>l + geom_map(aes(map_id = state), map = map) + expand_limits(x = map\$long, y = map\$lat)</pre> </li> </ul>

# Your Turn

Pair up.

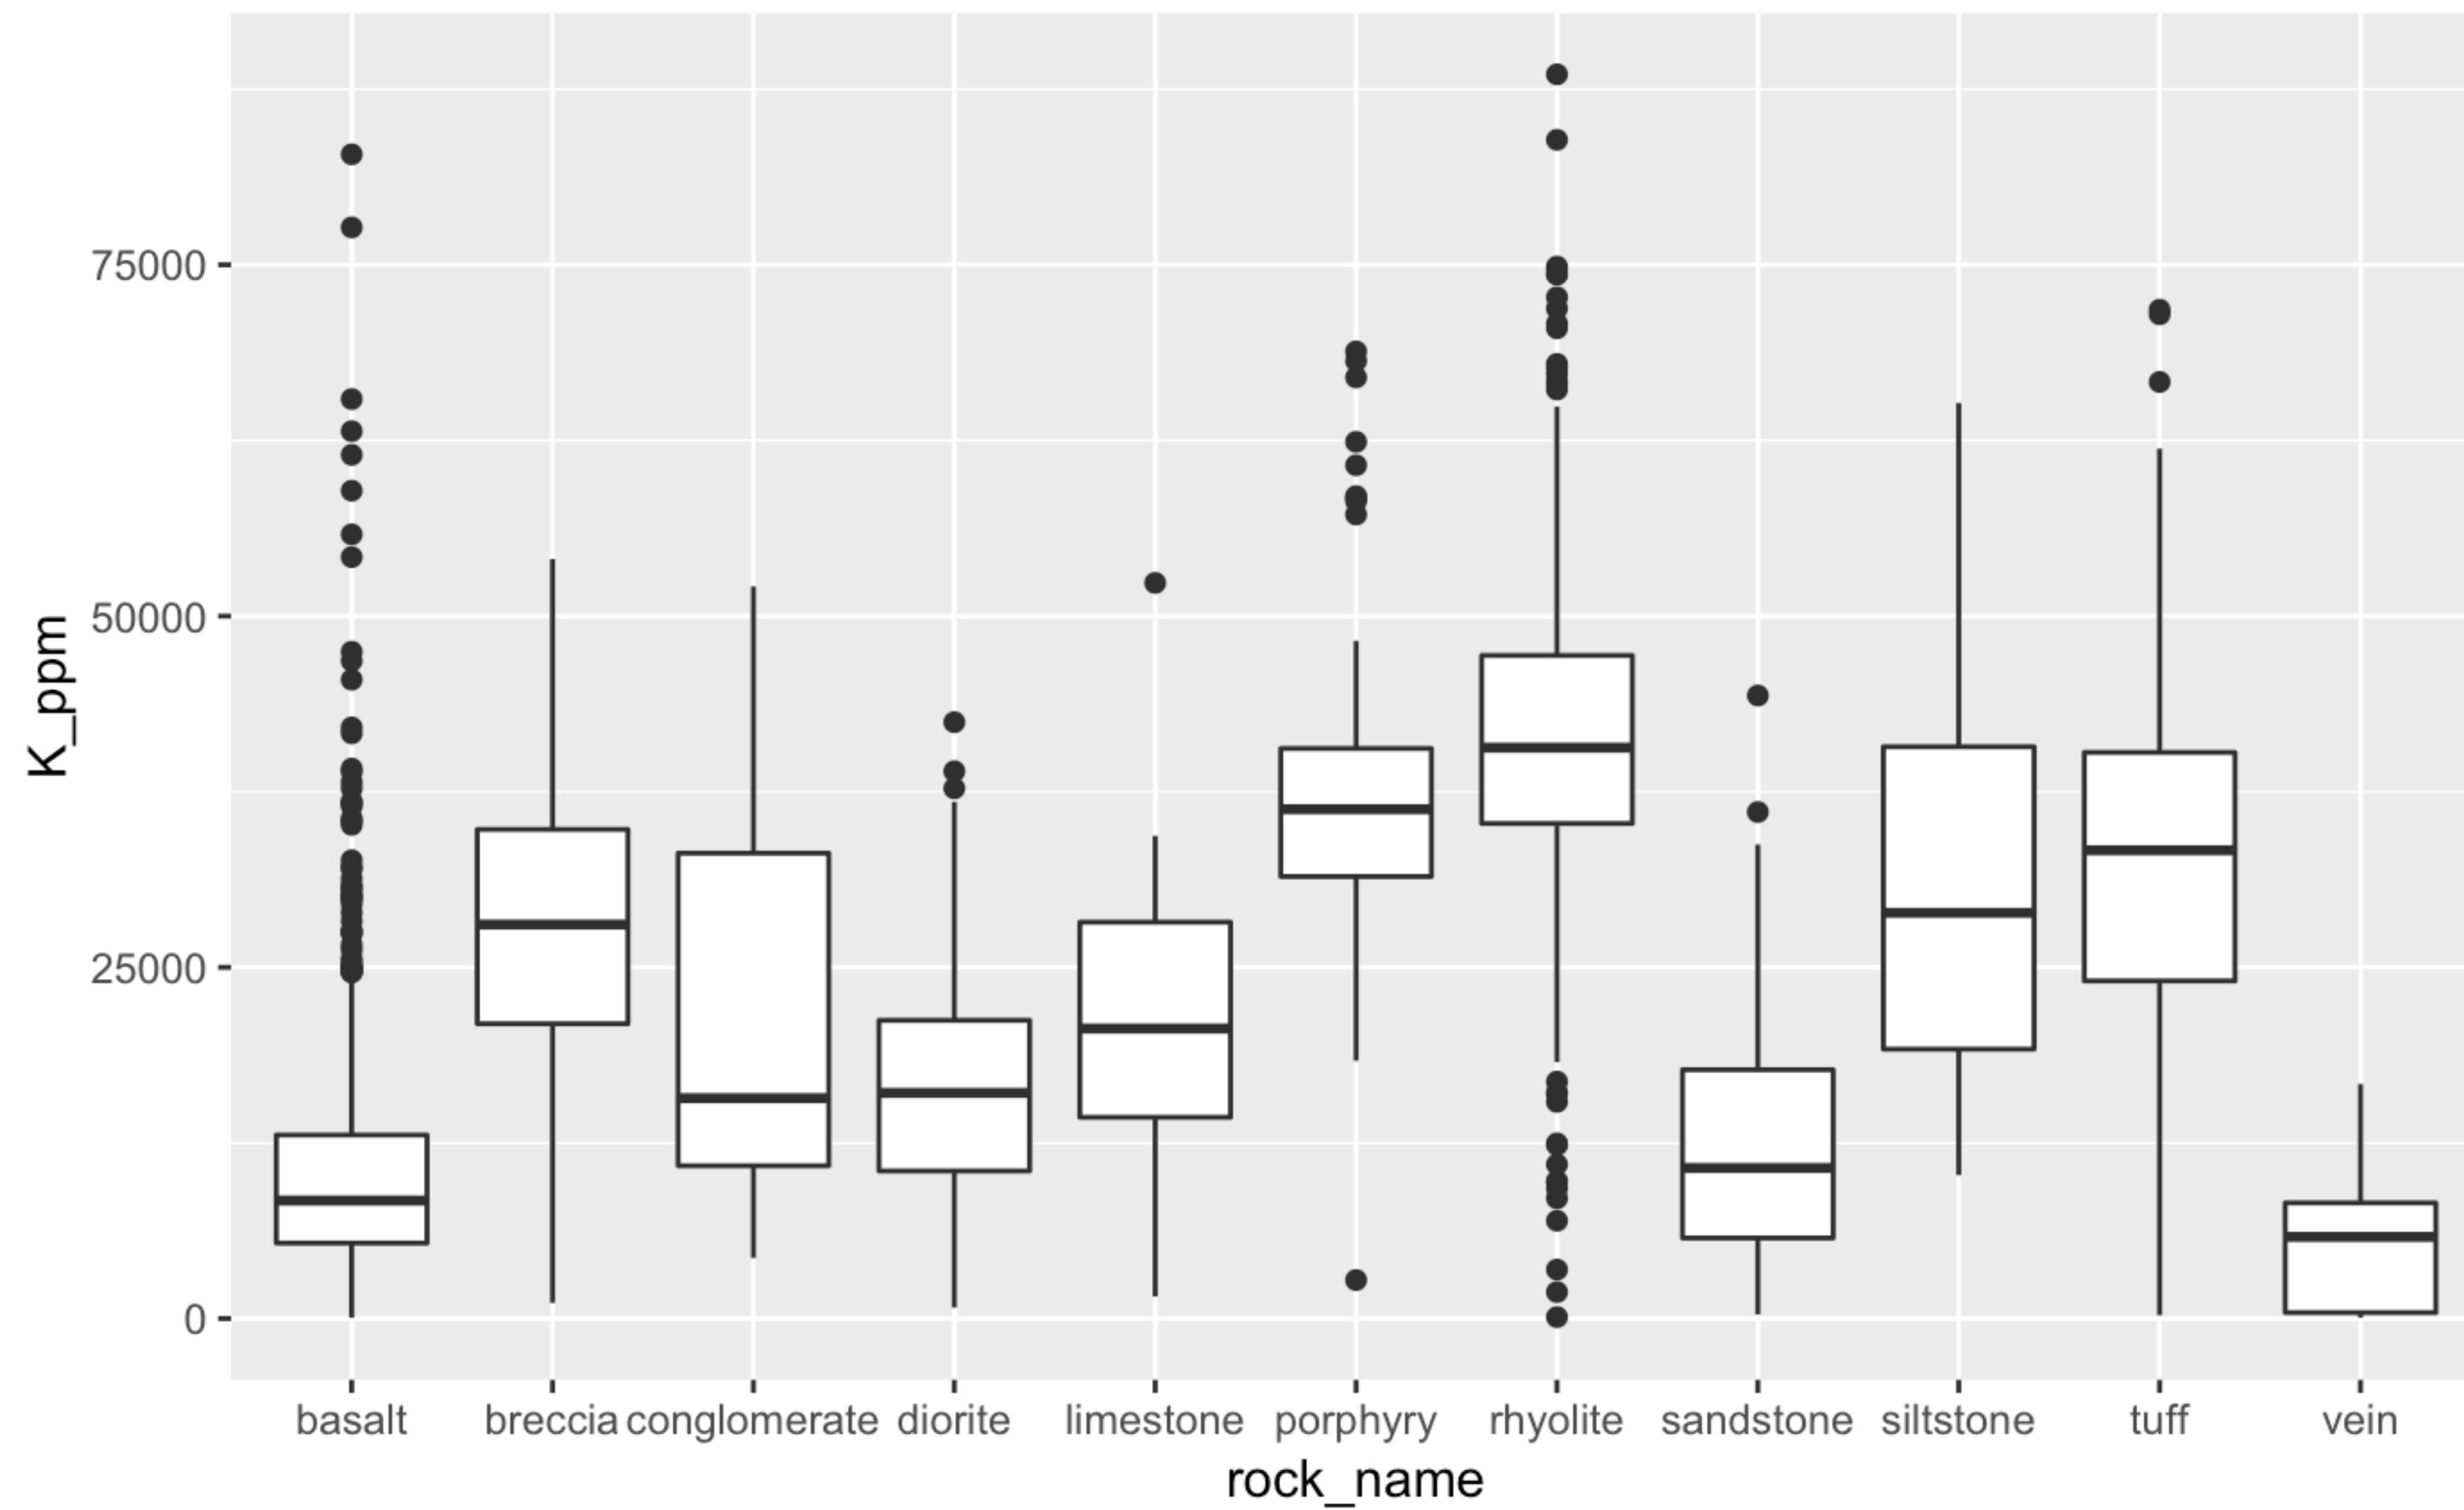

# Your Turn 3

With your partner, decide how to replace this scatterplot with one that draws boxplots. Use the cheatsheet. Try your best guess.

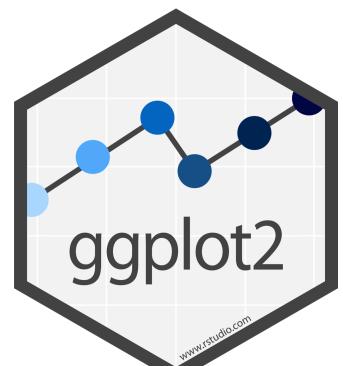

```
ggplot(warwick) + geom_point(aes(rock_name, K_ppm))
```

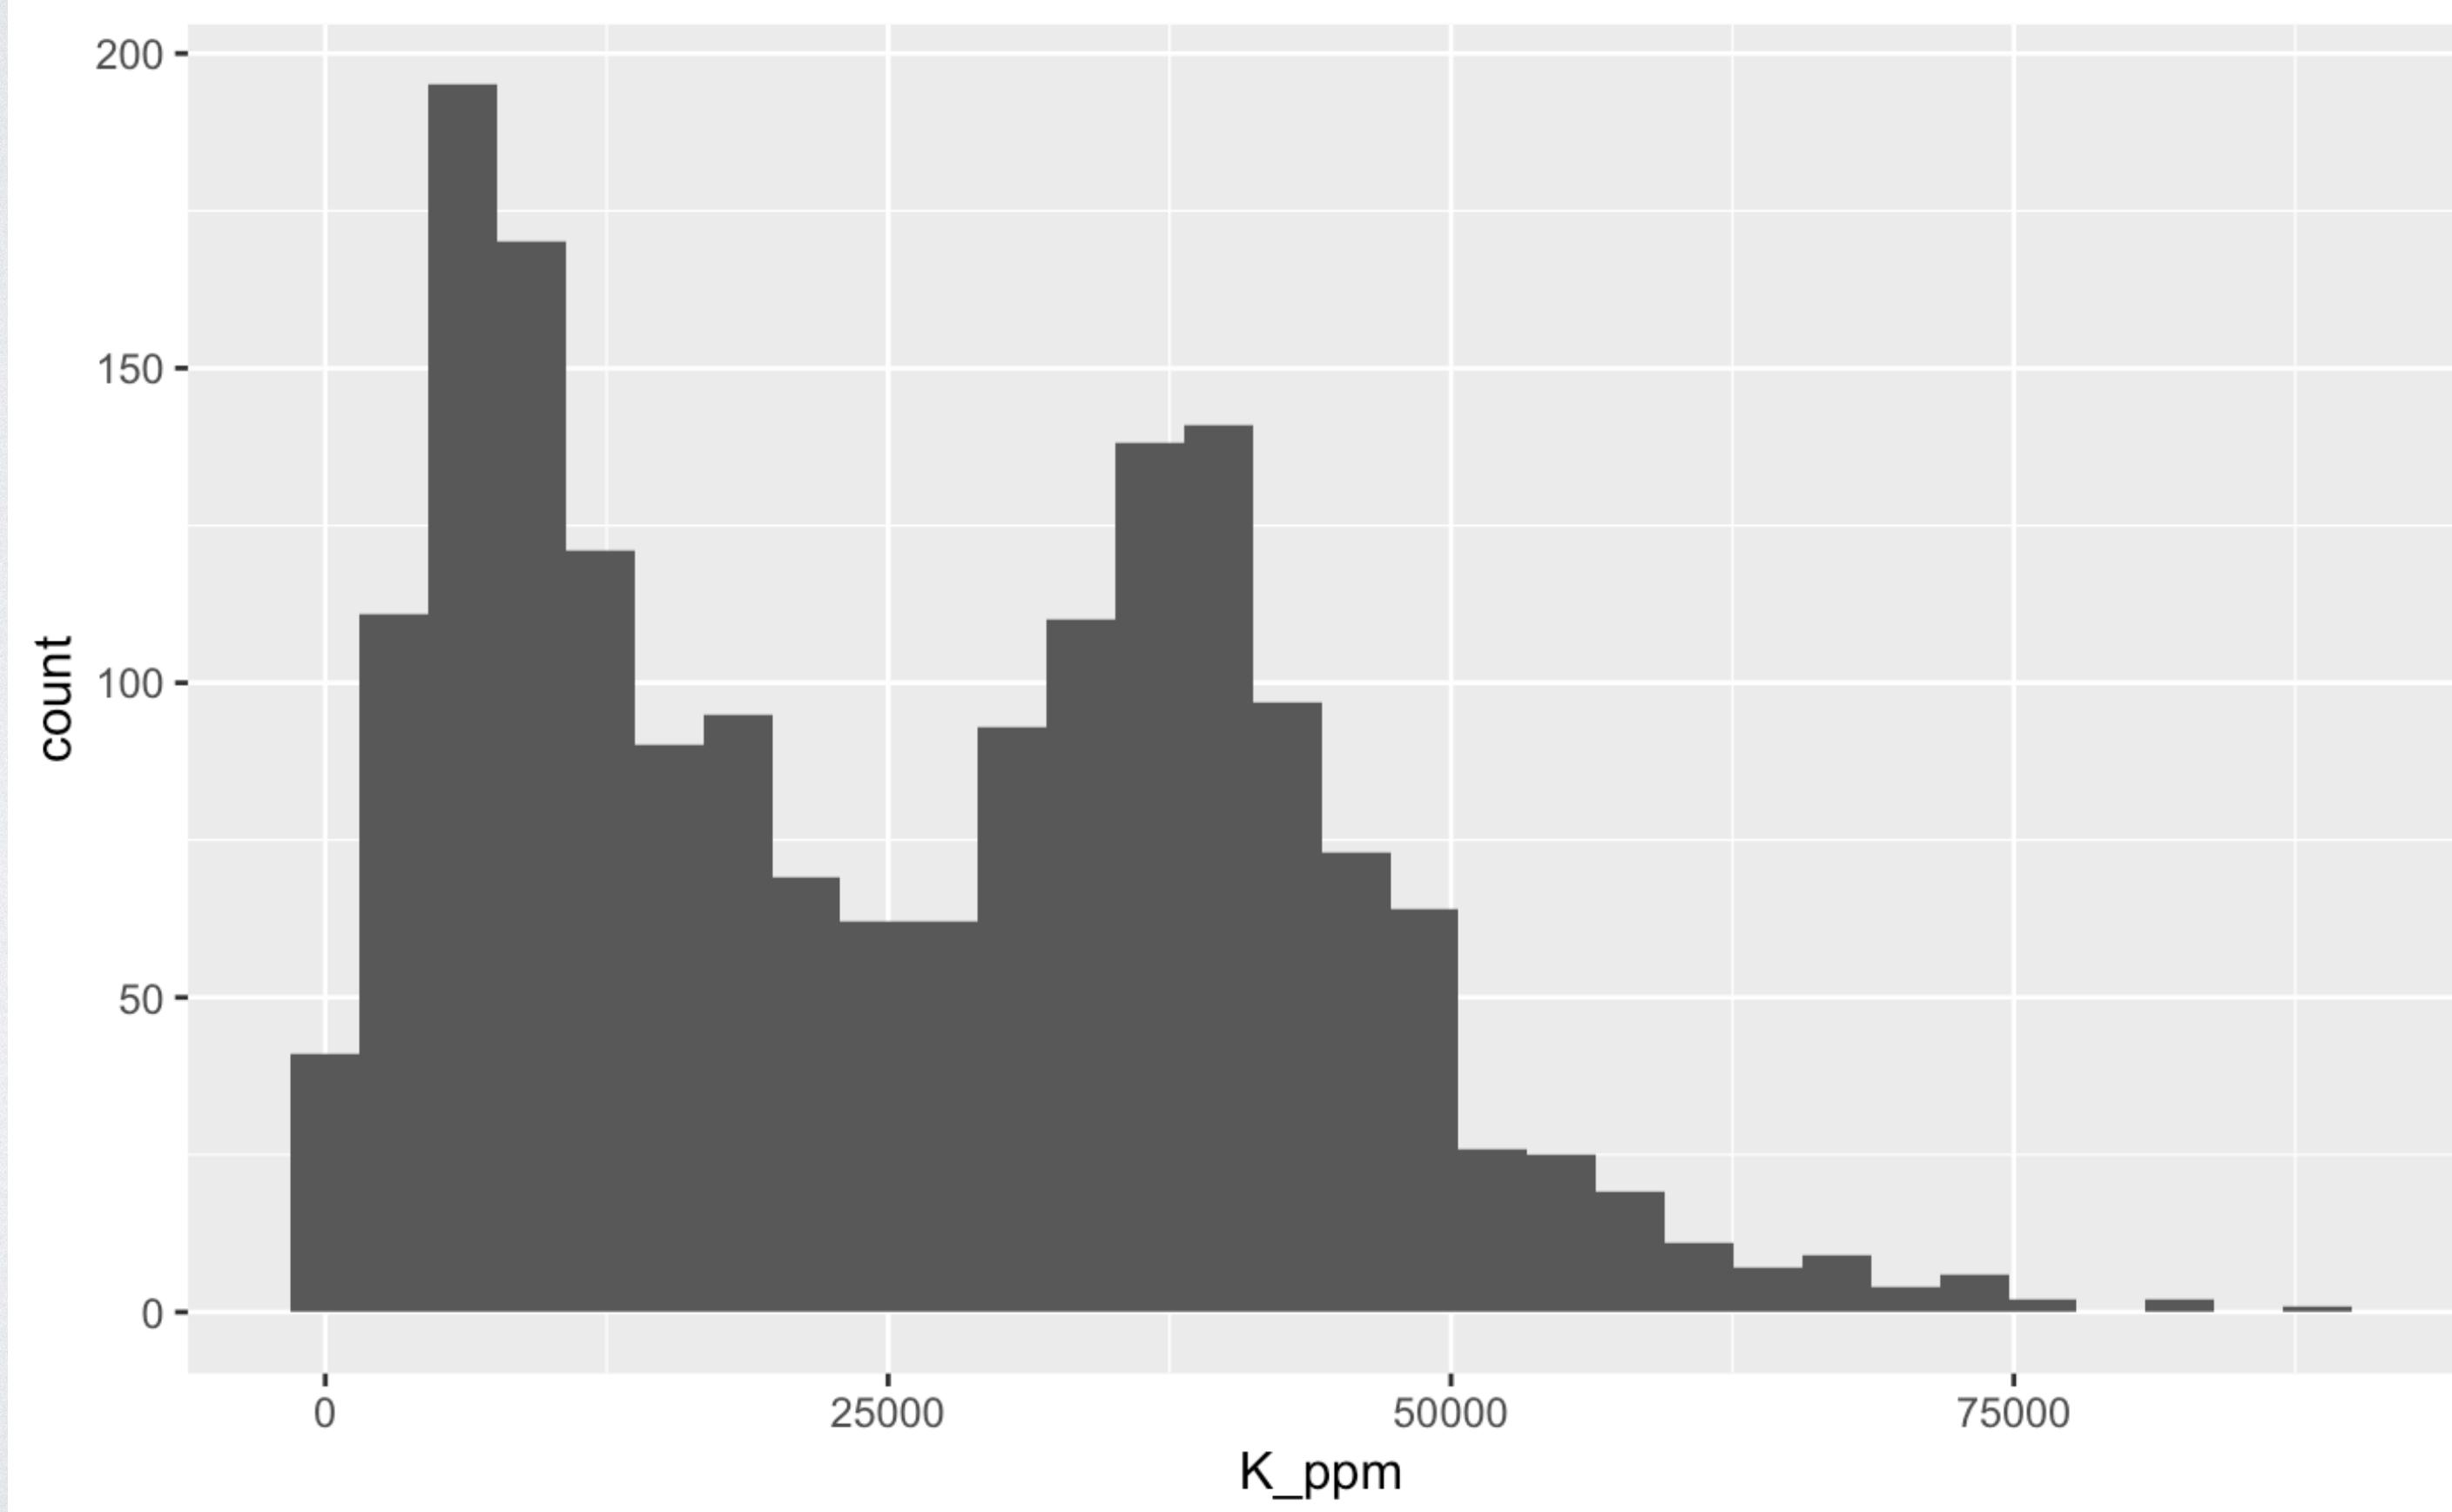

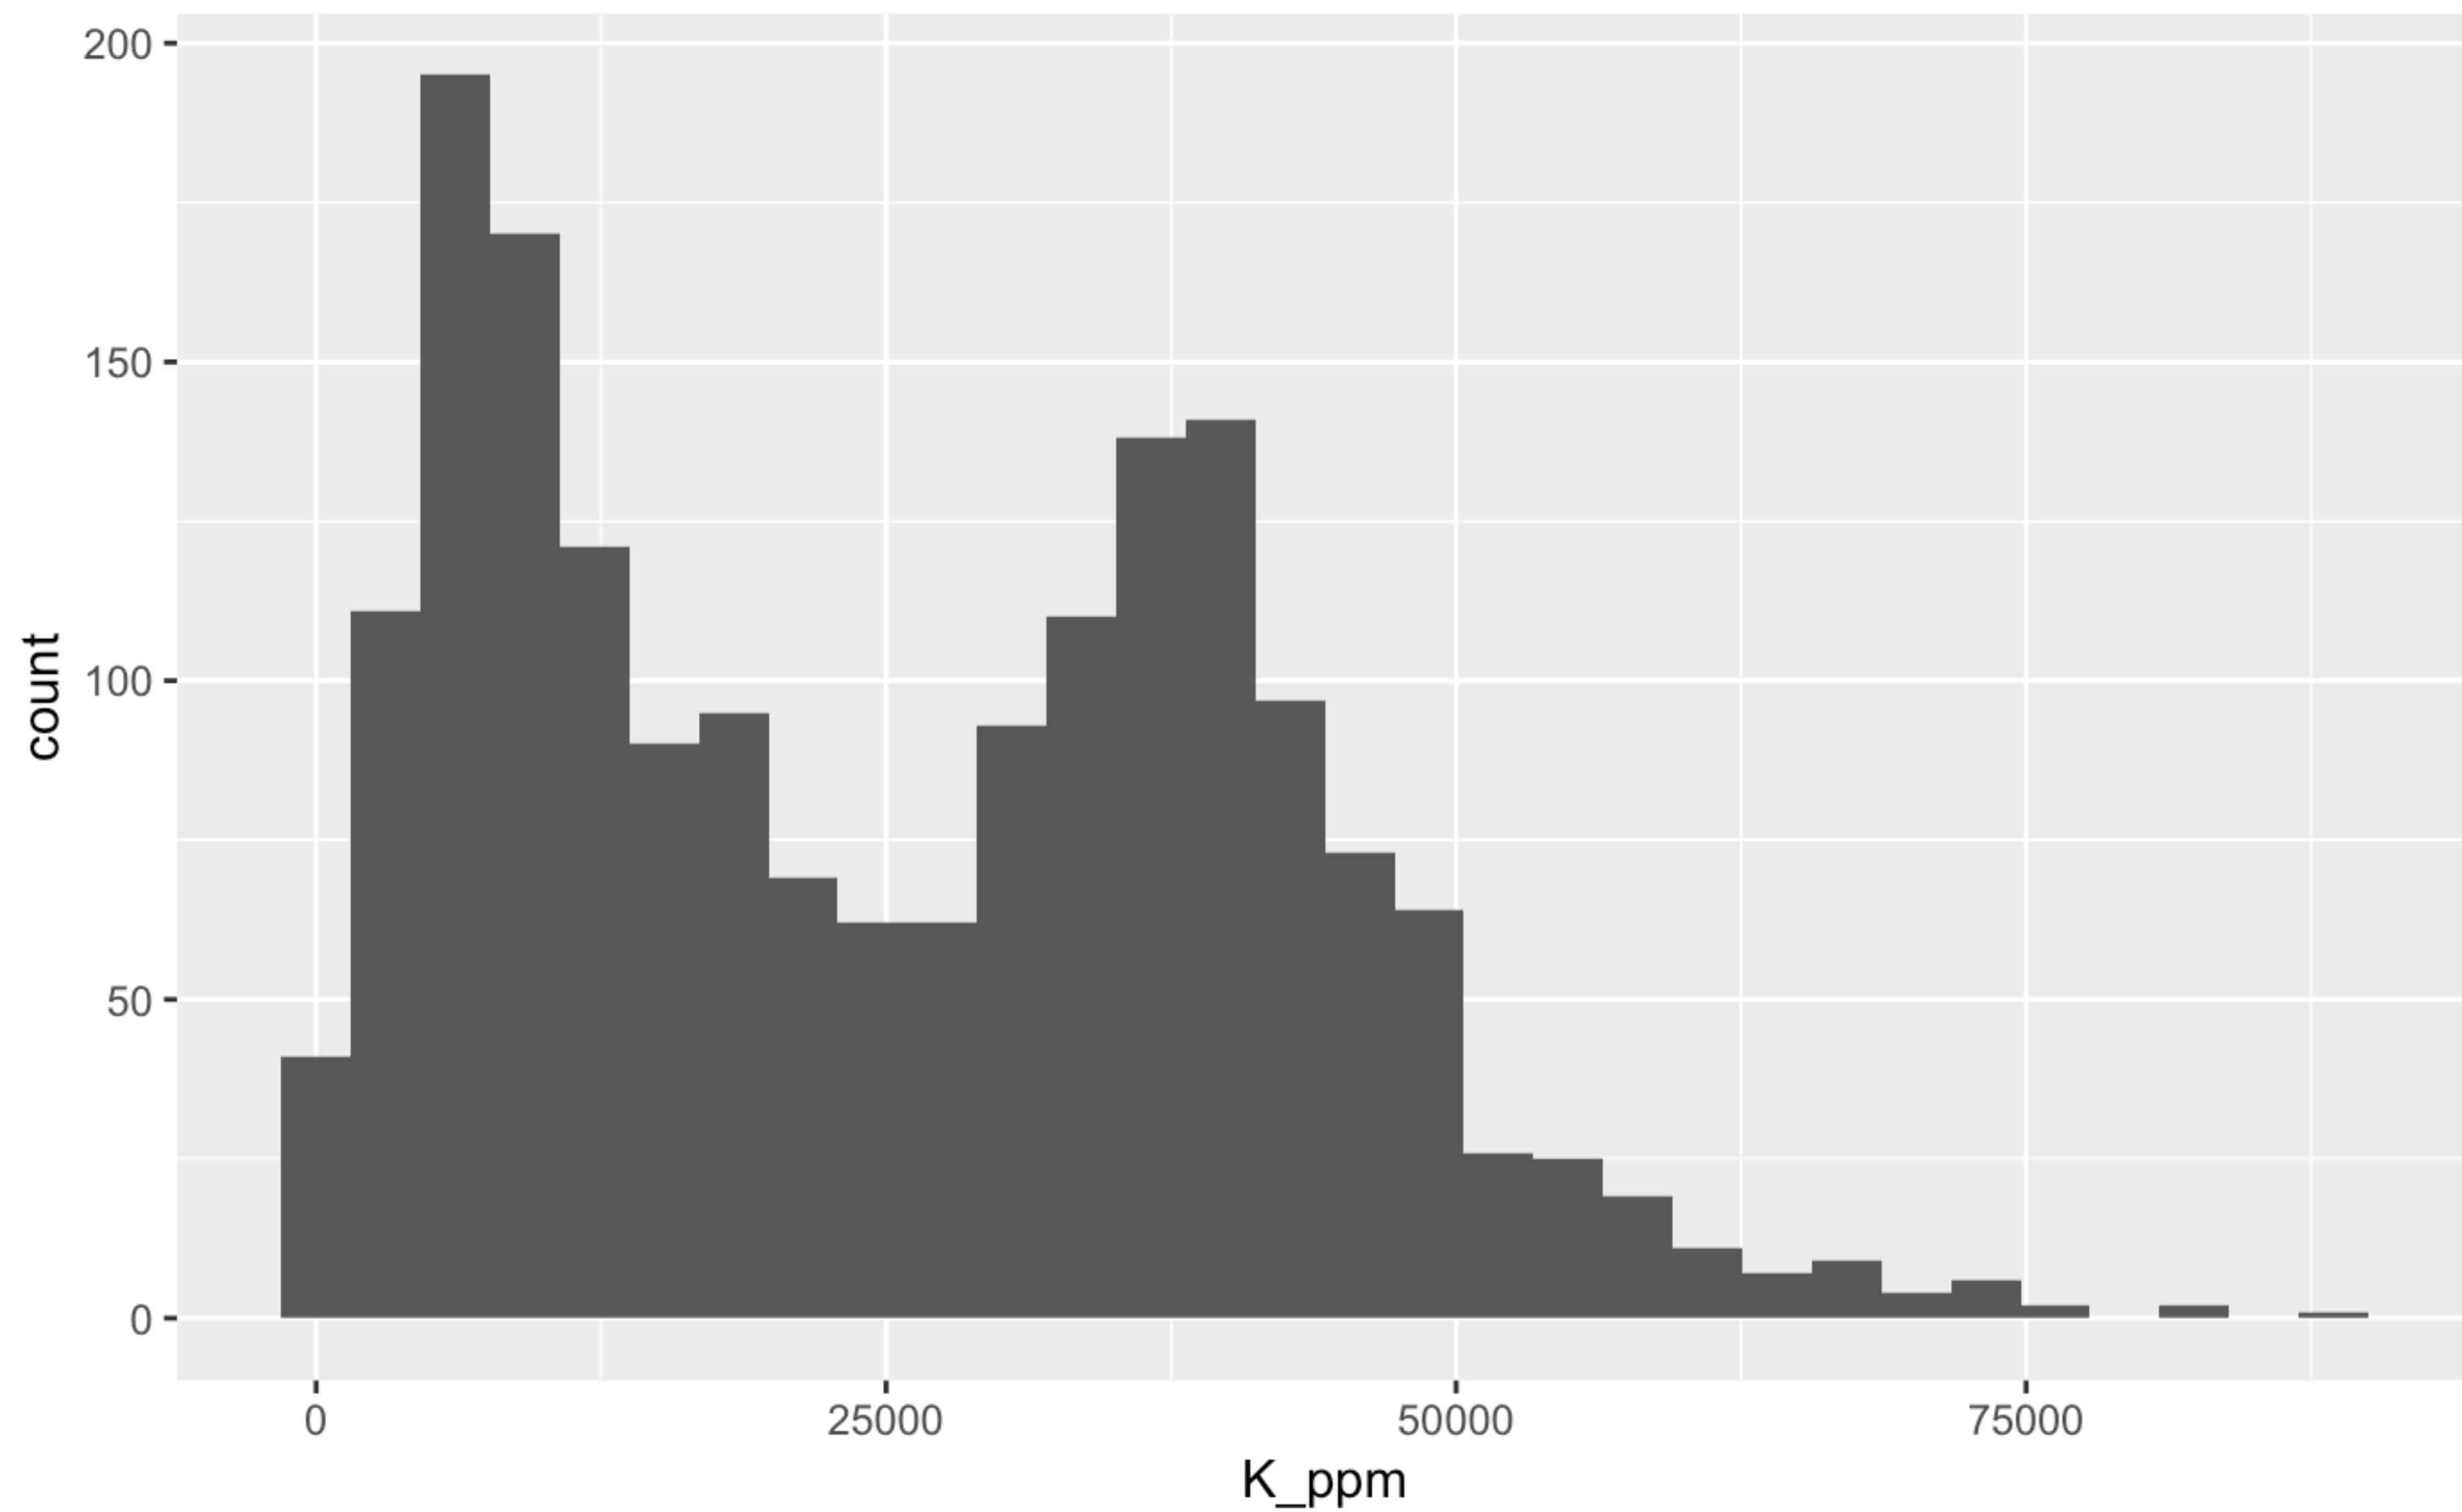

```
ggplot(data = warwick) +  
  geom_boxplot(mapping = aes(x = rock_name, y = K_ppm))
```

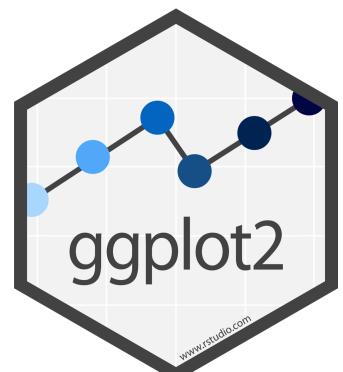

# Your Turn 4

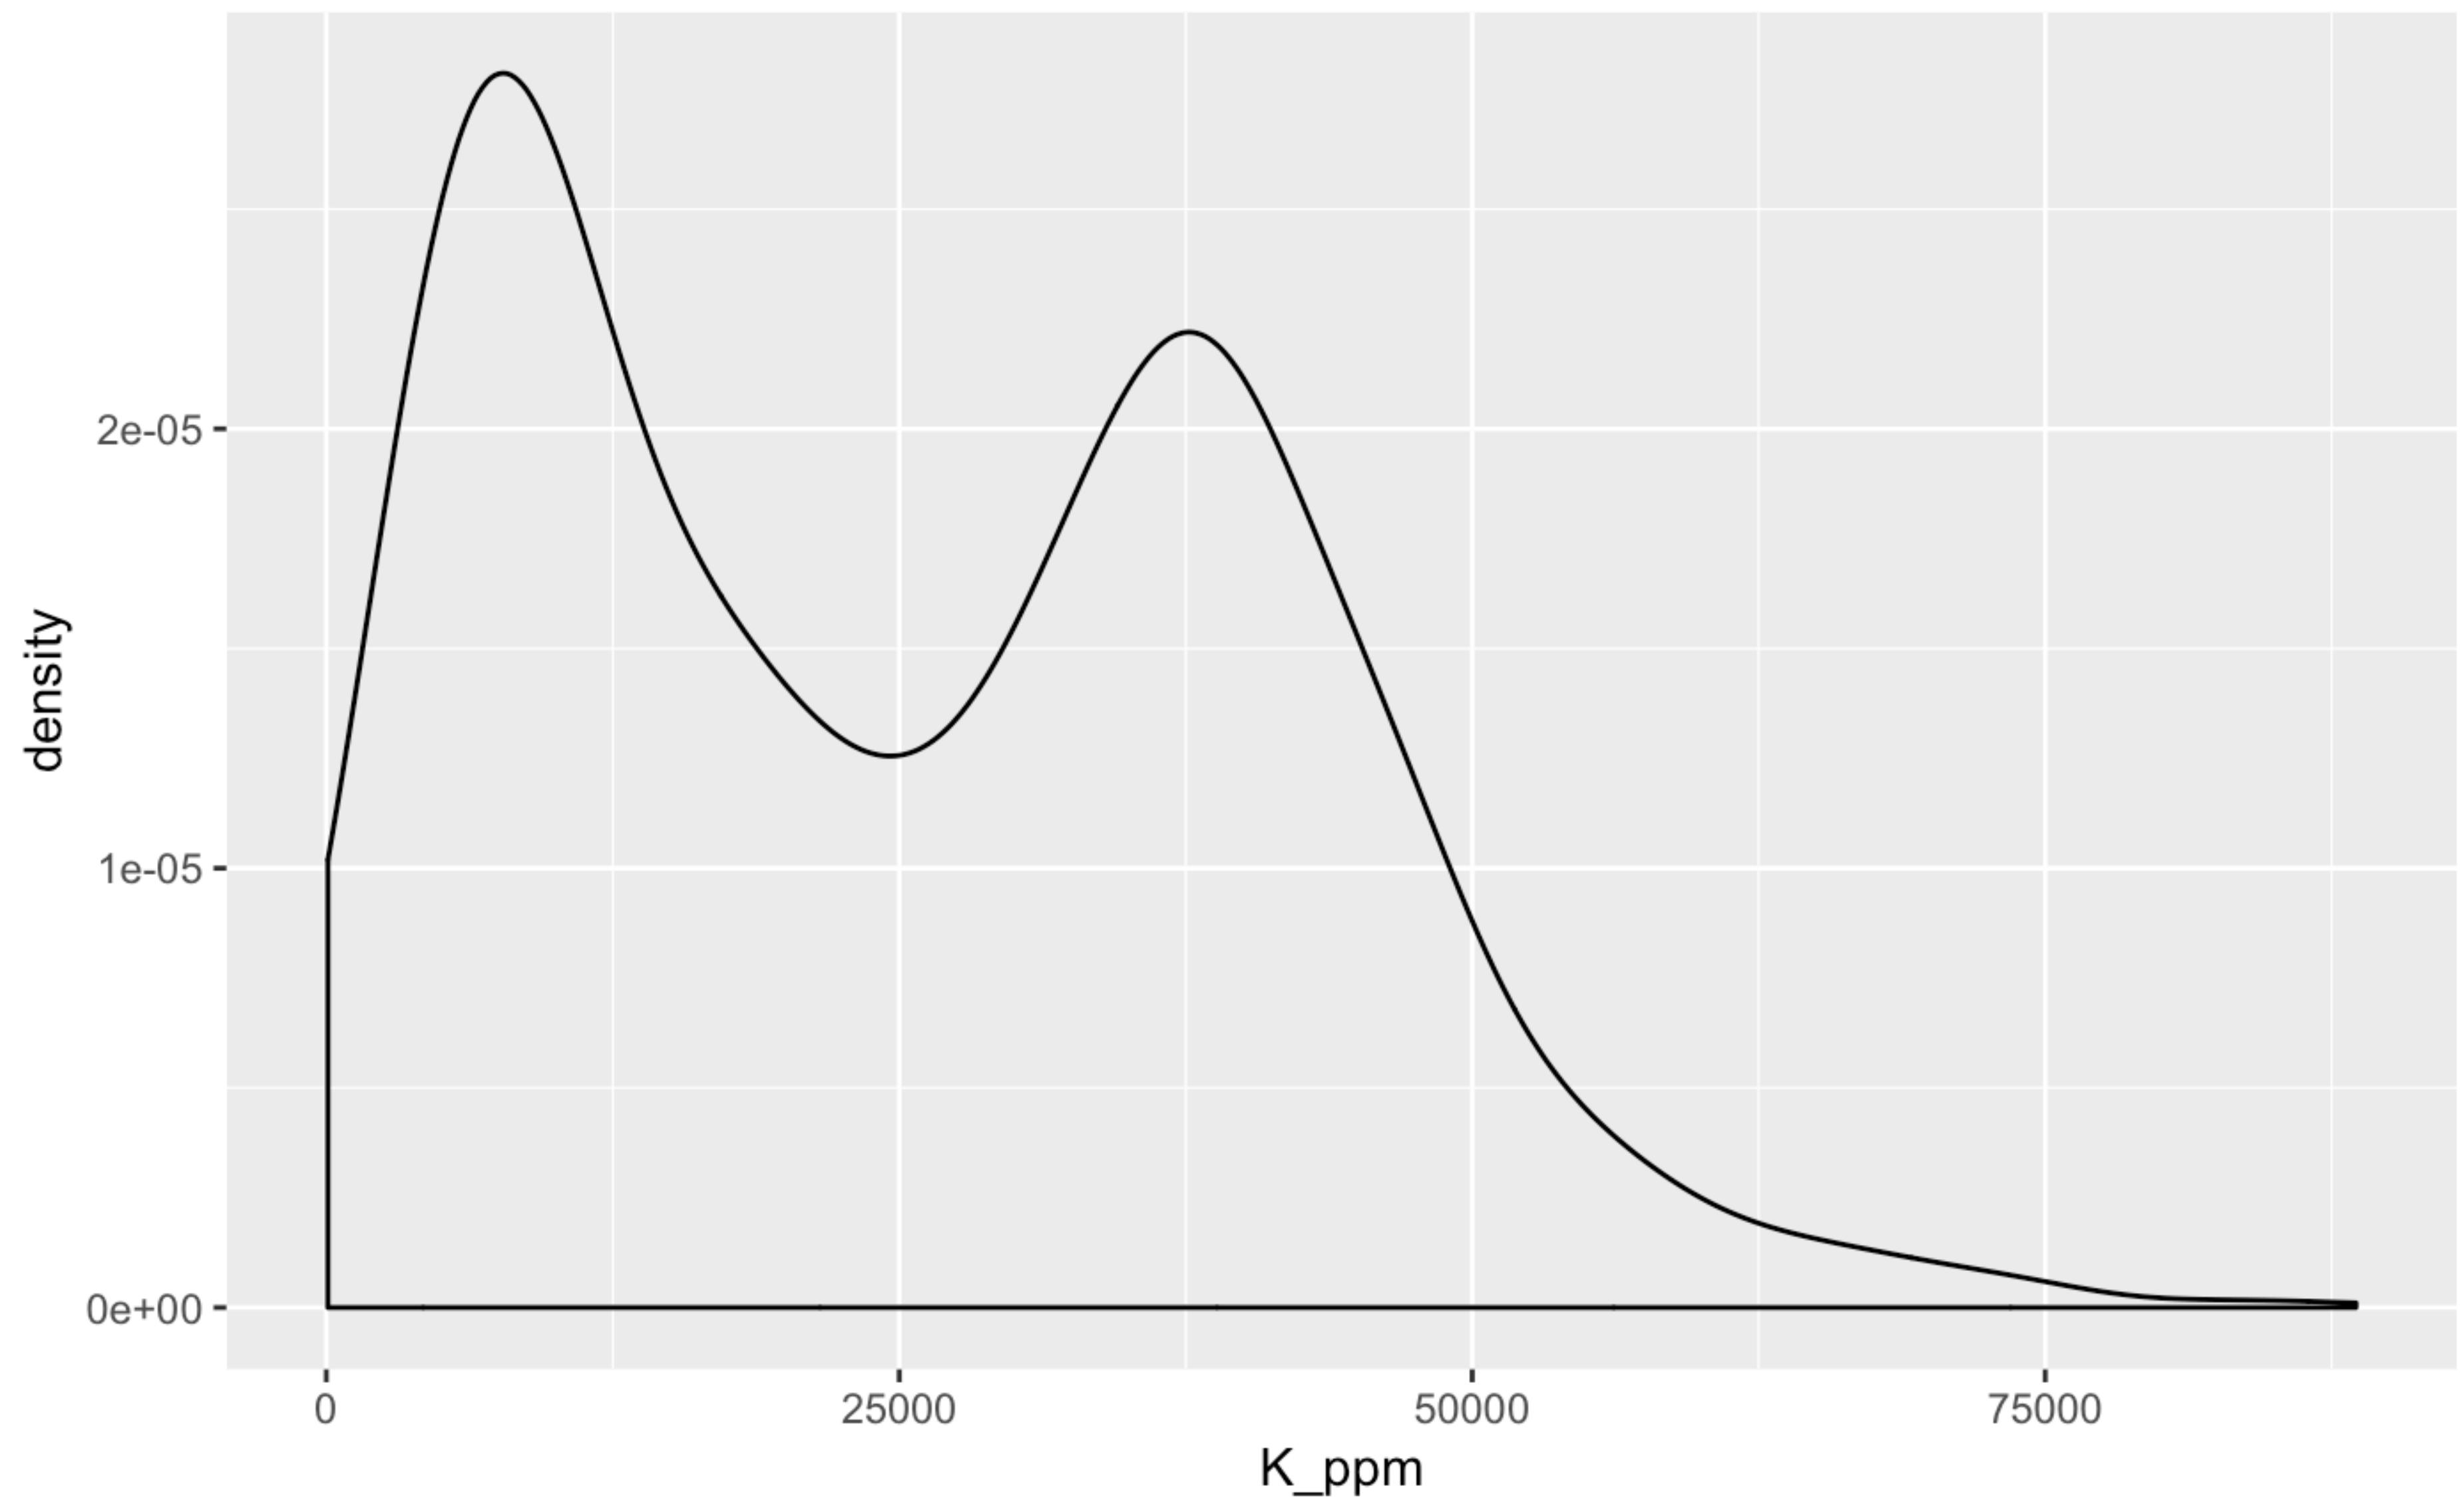

With your partner, make the histogram of **K\_ppm** below. Use the cheatsheet. Hint: do not supply a **y** variable.

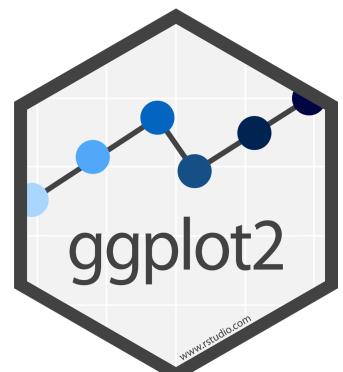

```
ggplot(data = warwick) +  
  geom_histogram(mapping = aes(x = K_ppm))
```

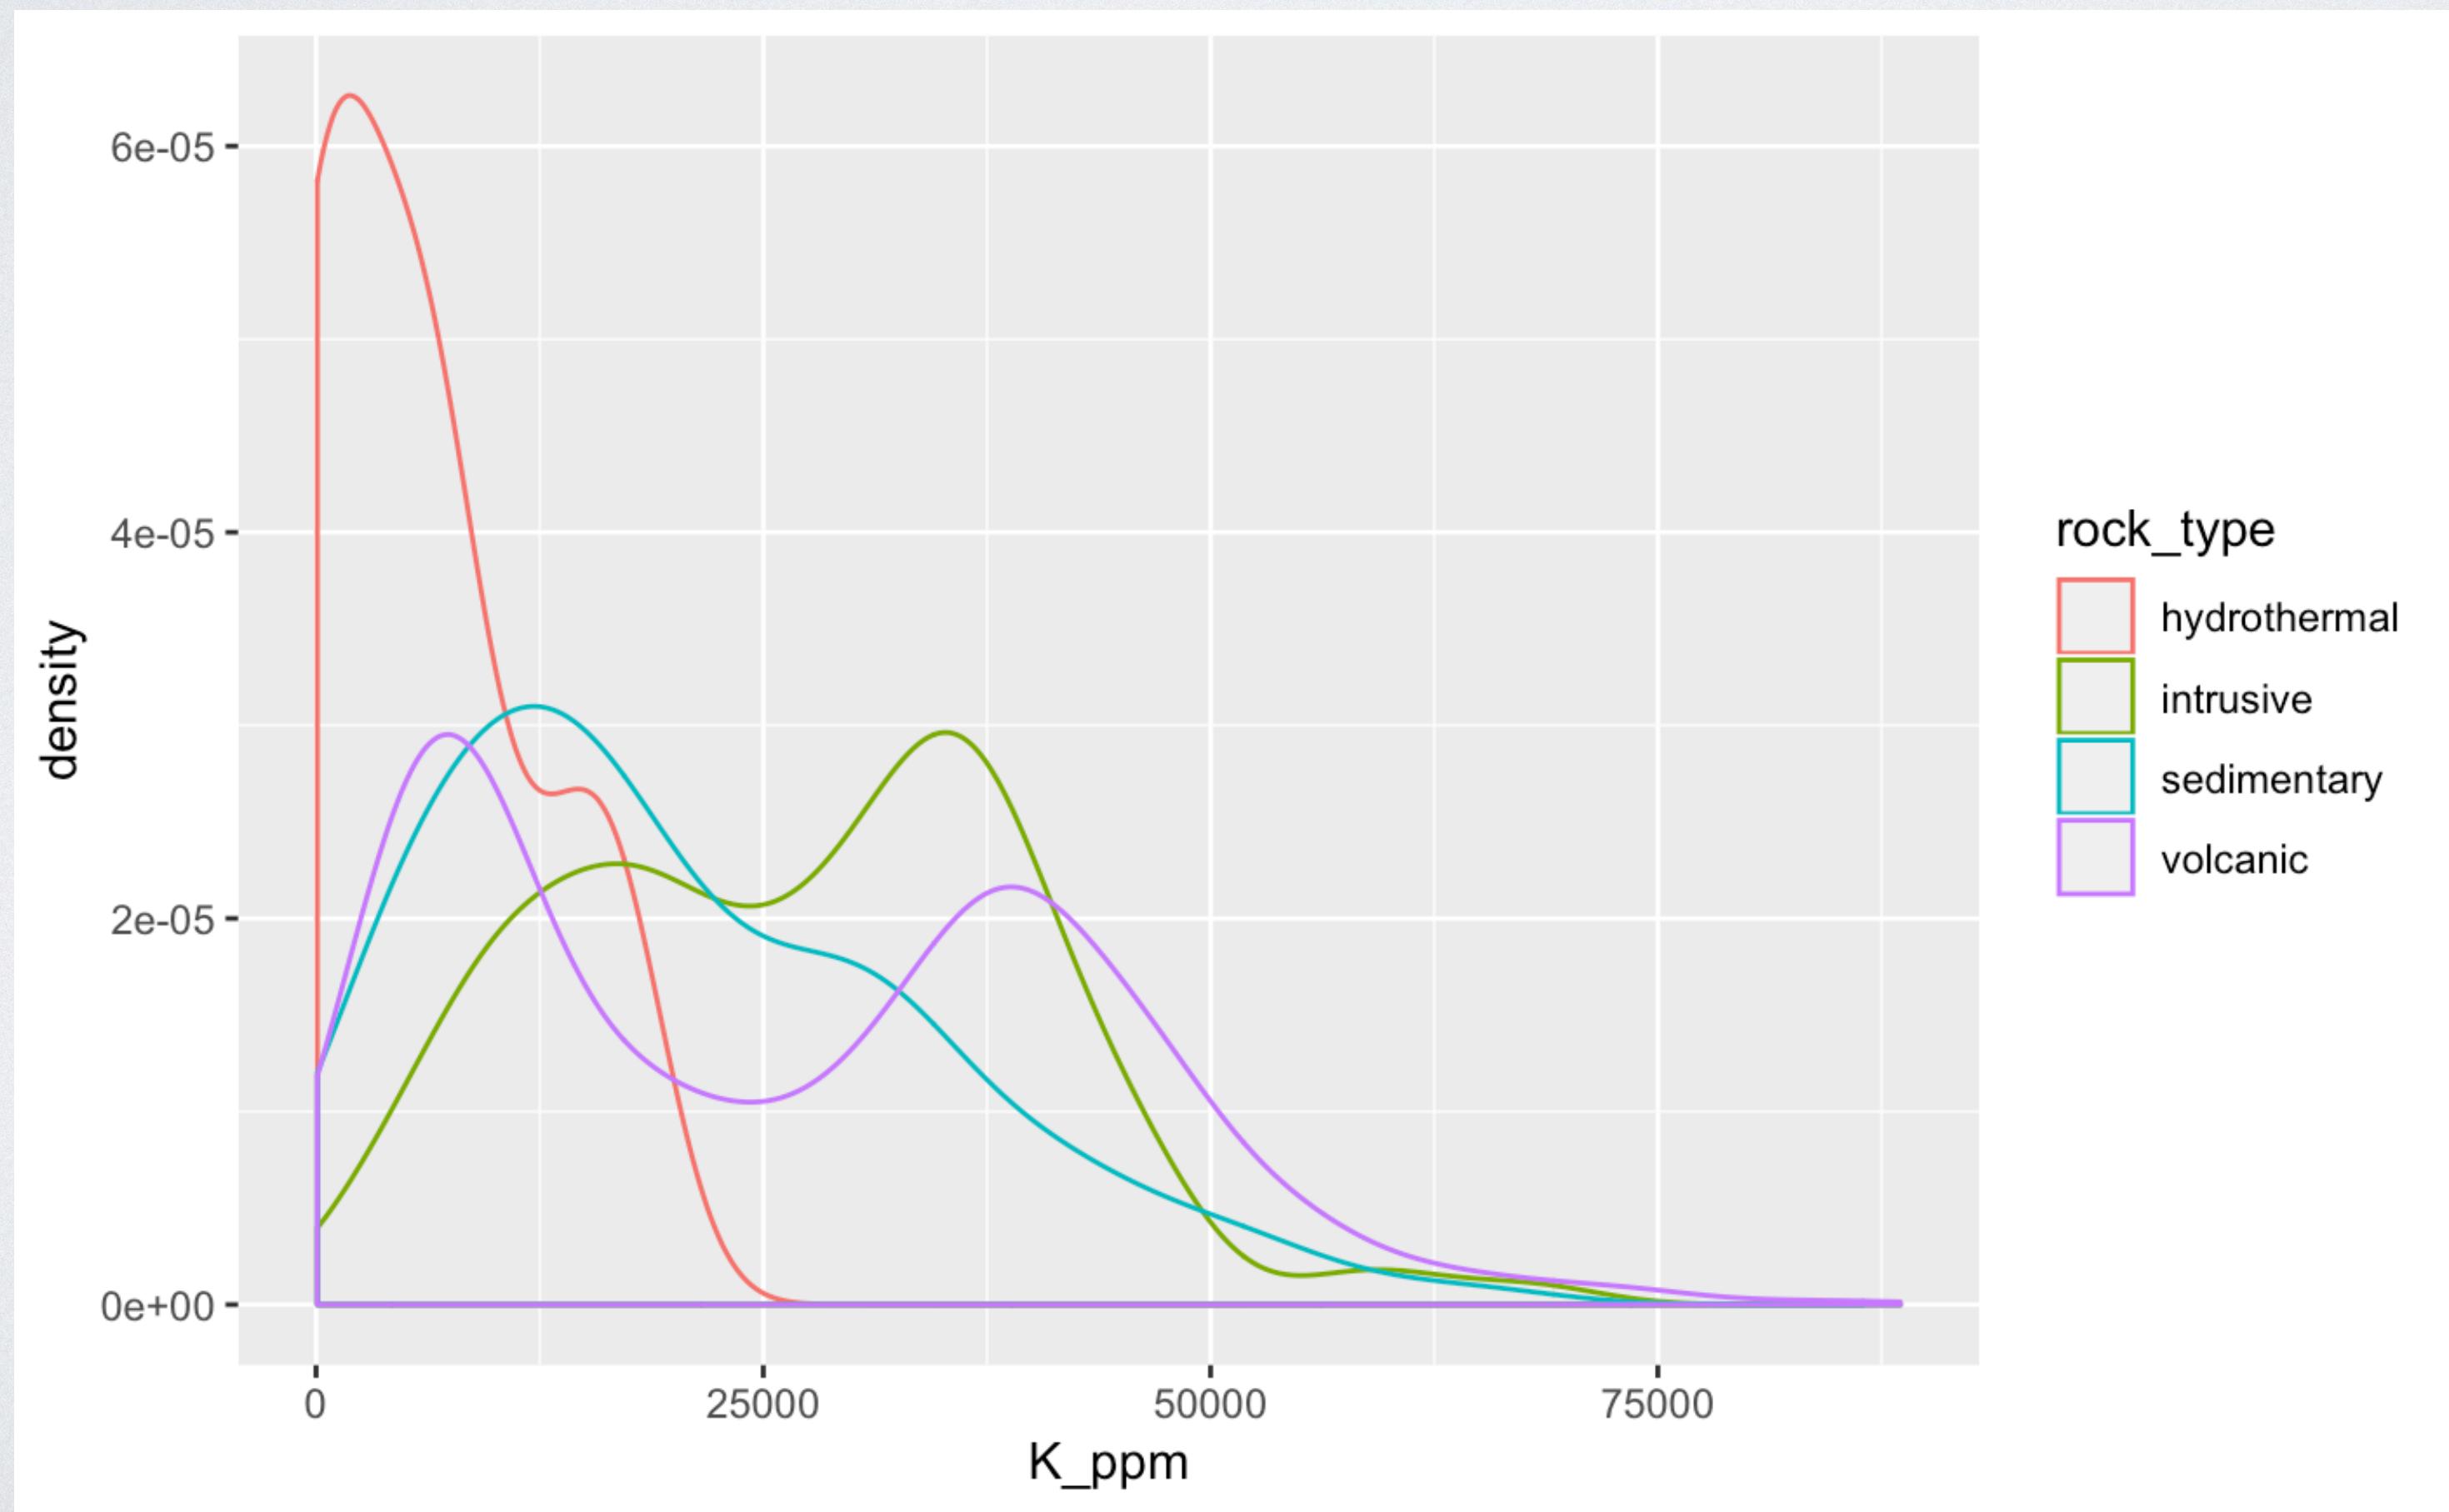

```
ggplot(data = warwick) +  
  geom_density(mapping = aes(x = K_ppm))
```

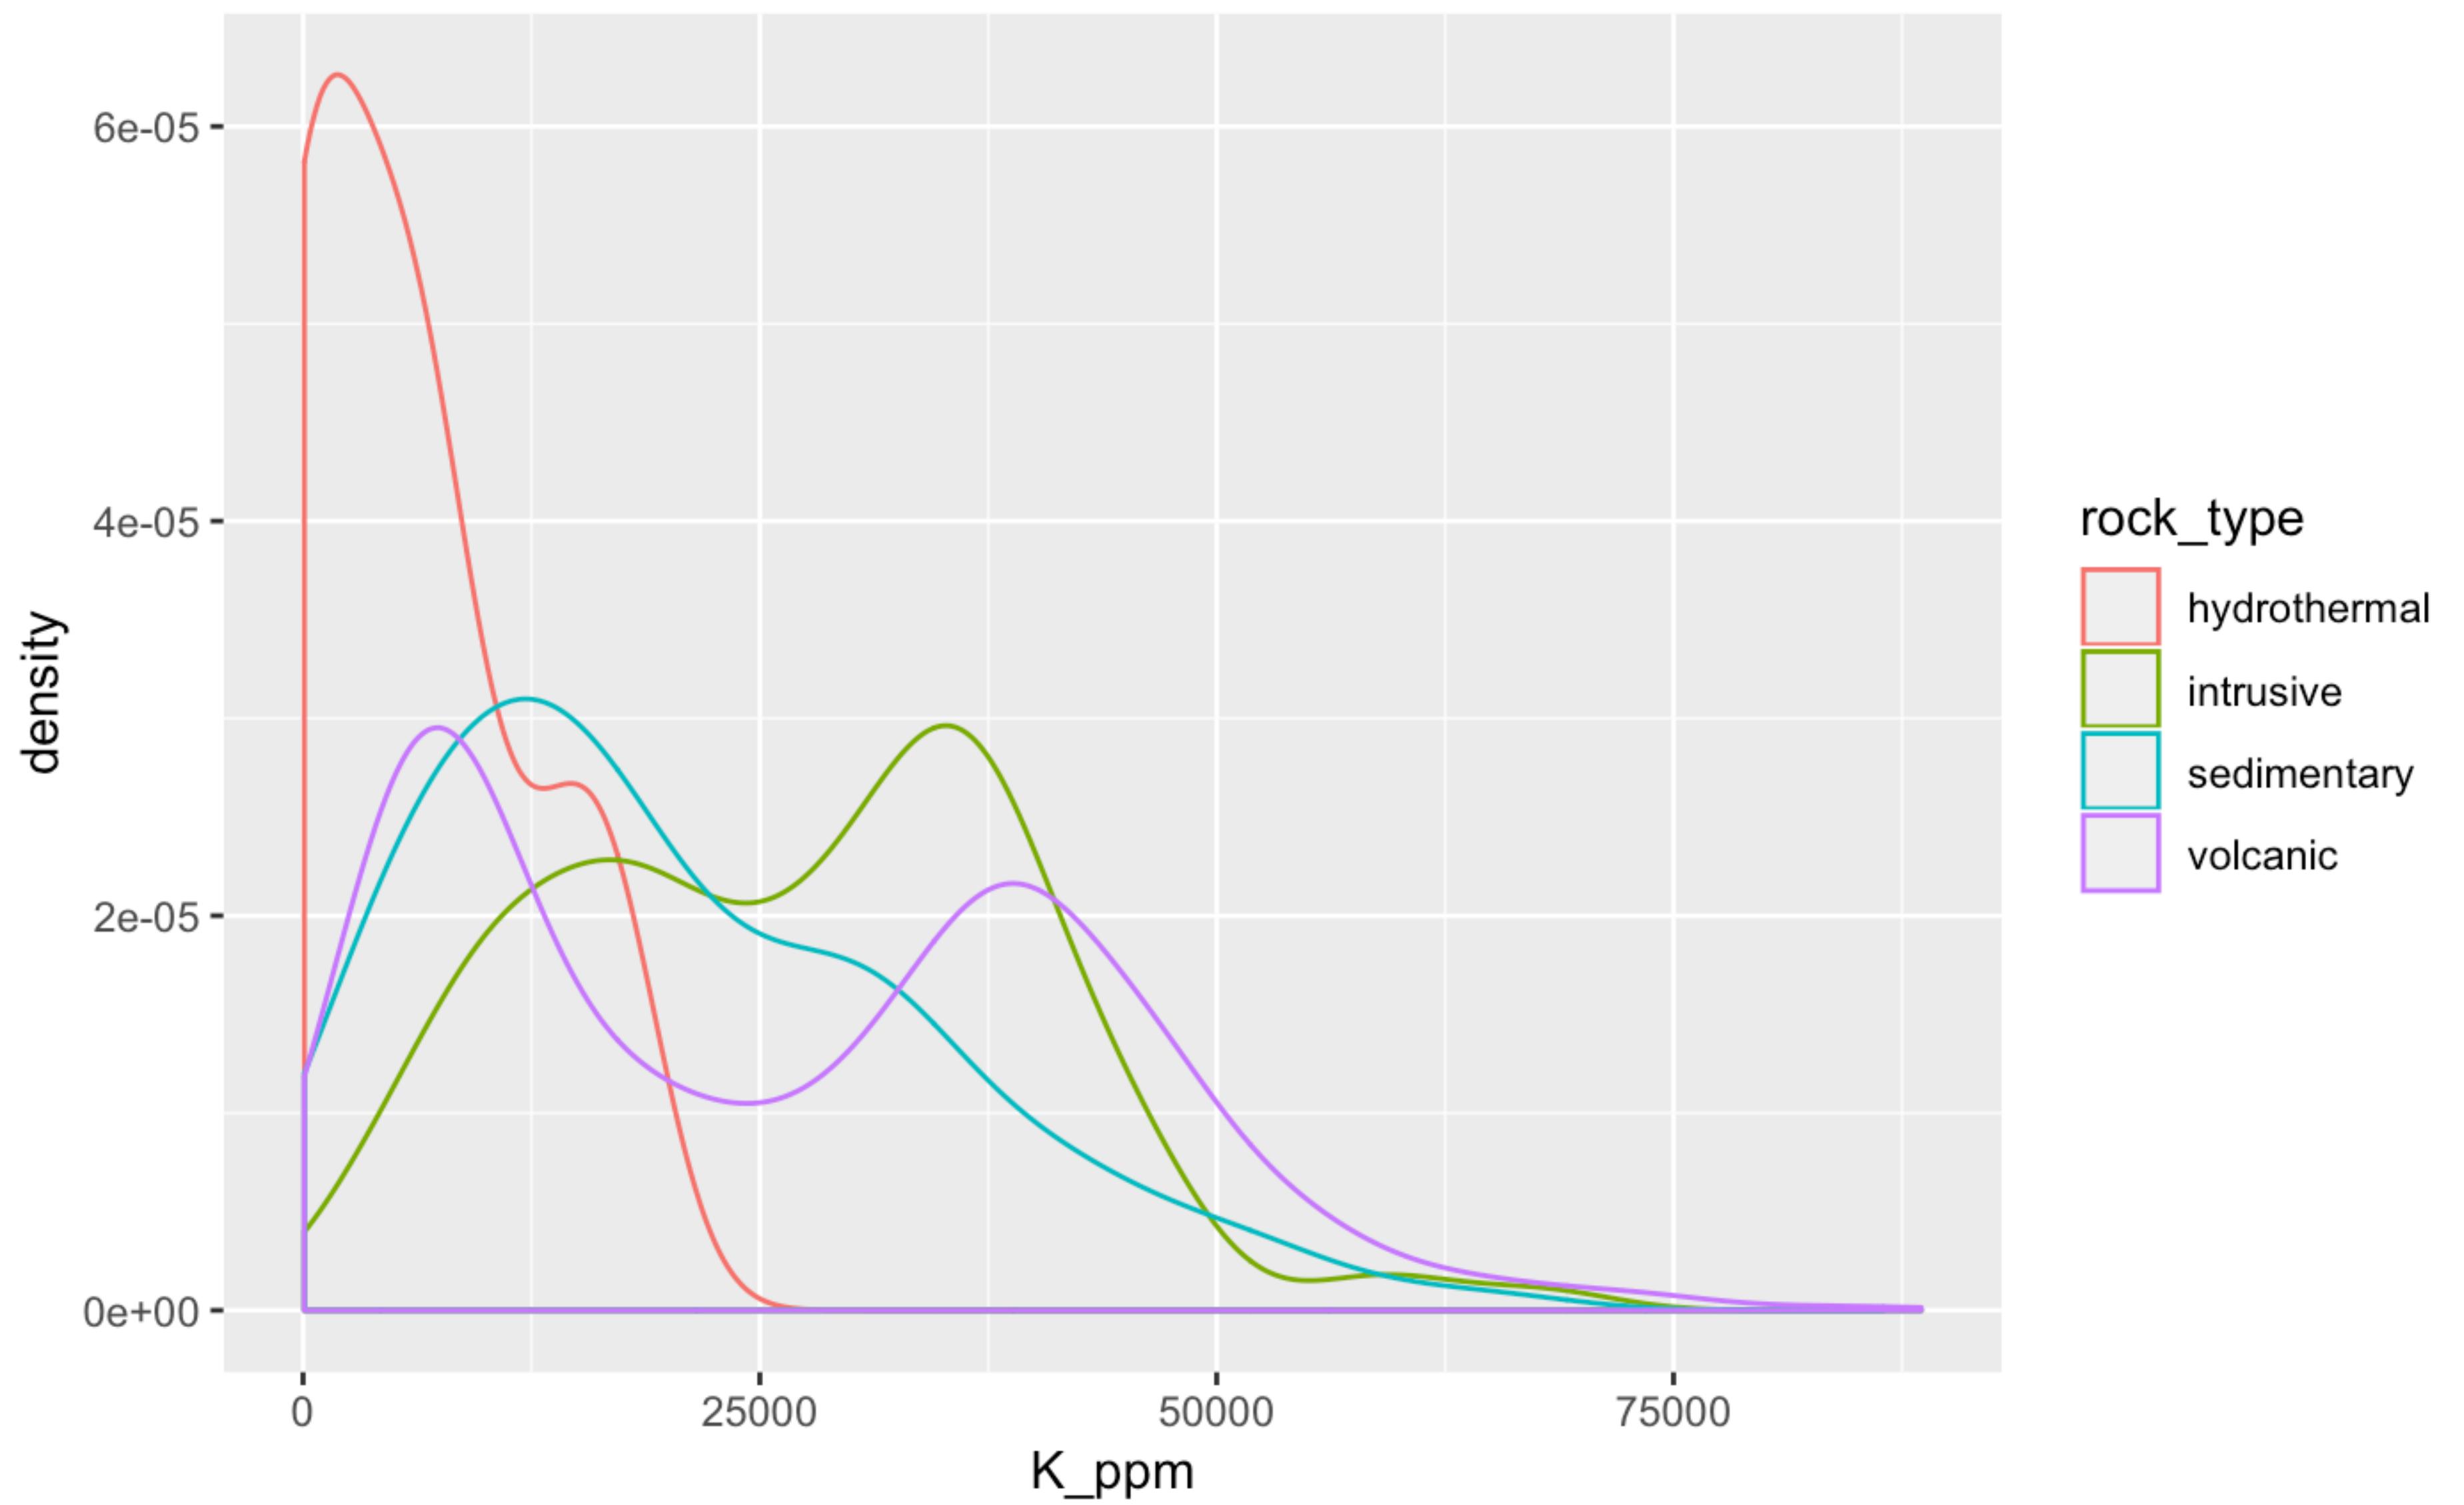

# Your Turn 5

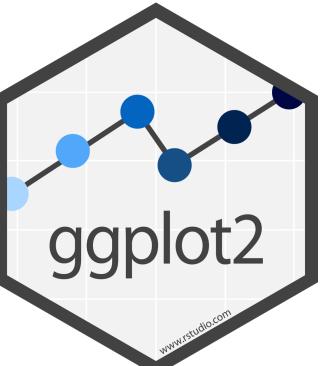

With your partner, make the density plot of **K\_ppm** colored by **rock\_type** below. Use the cheatsheet. Try your best guess.

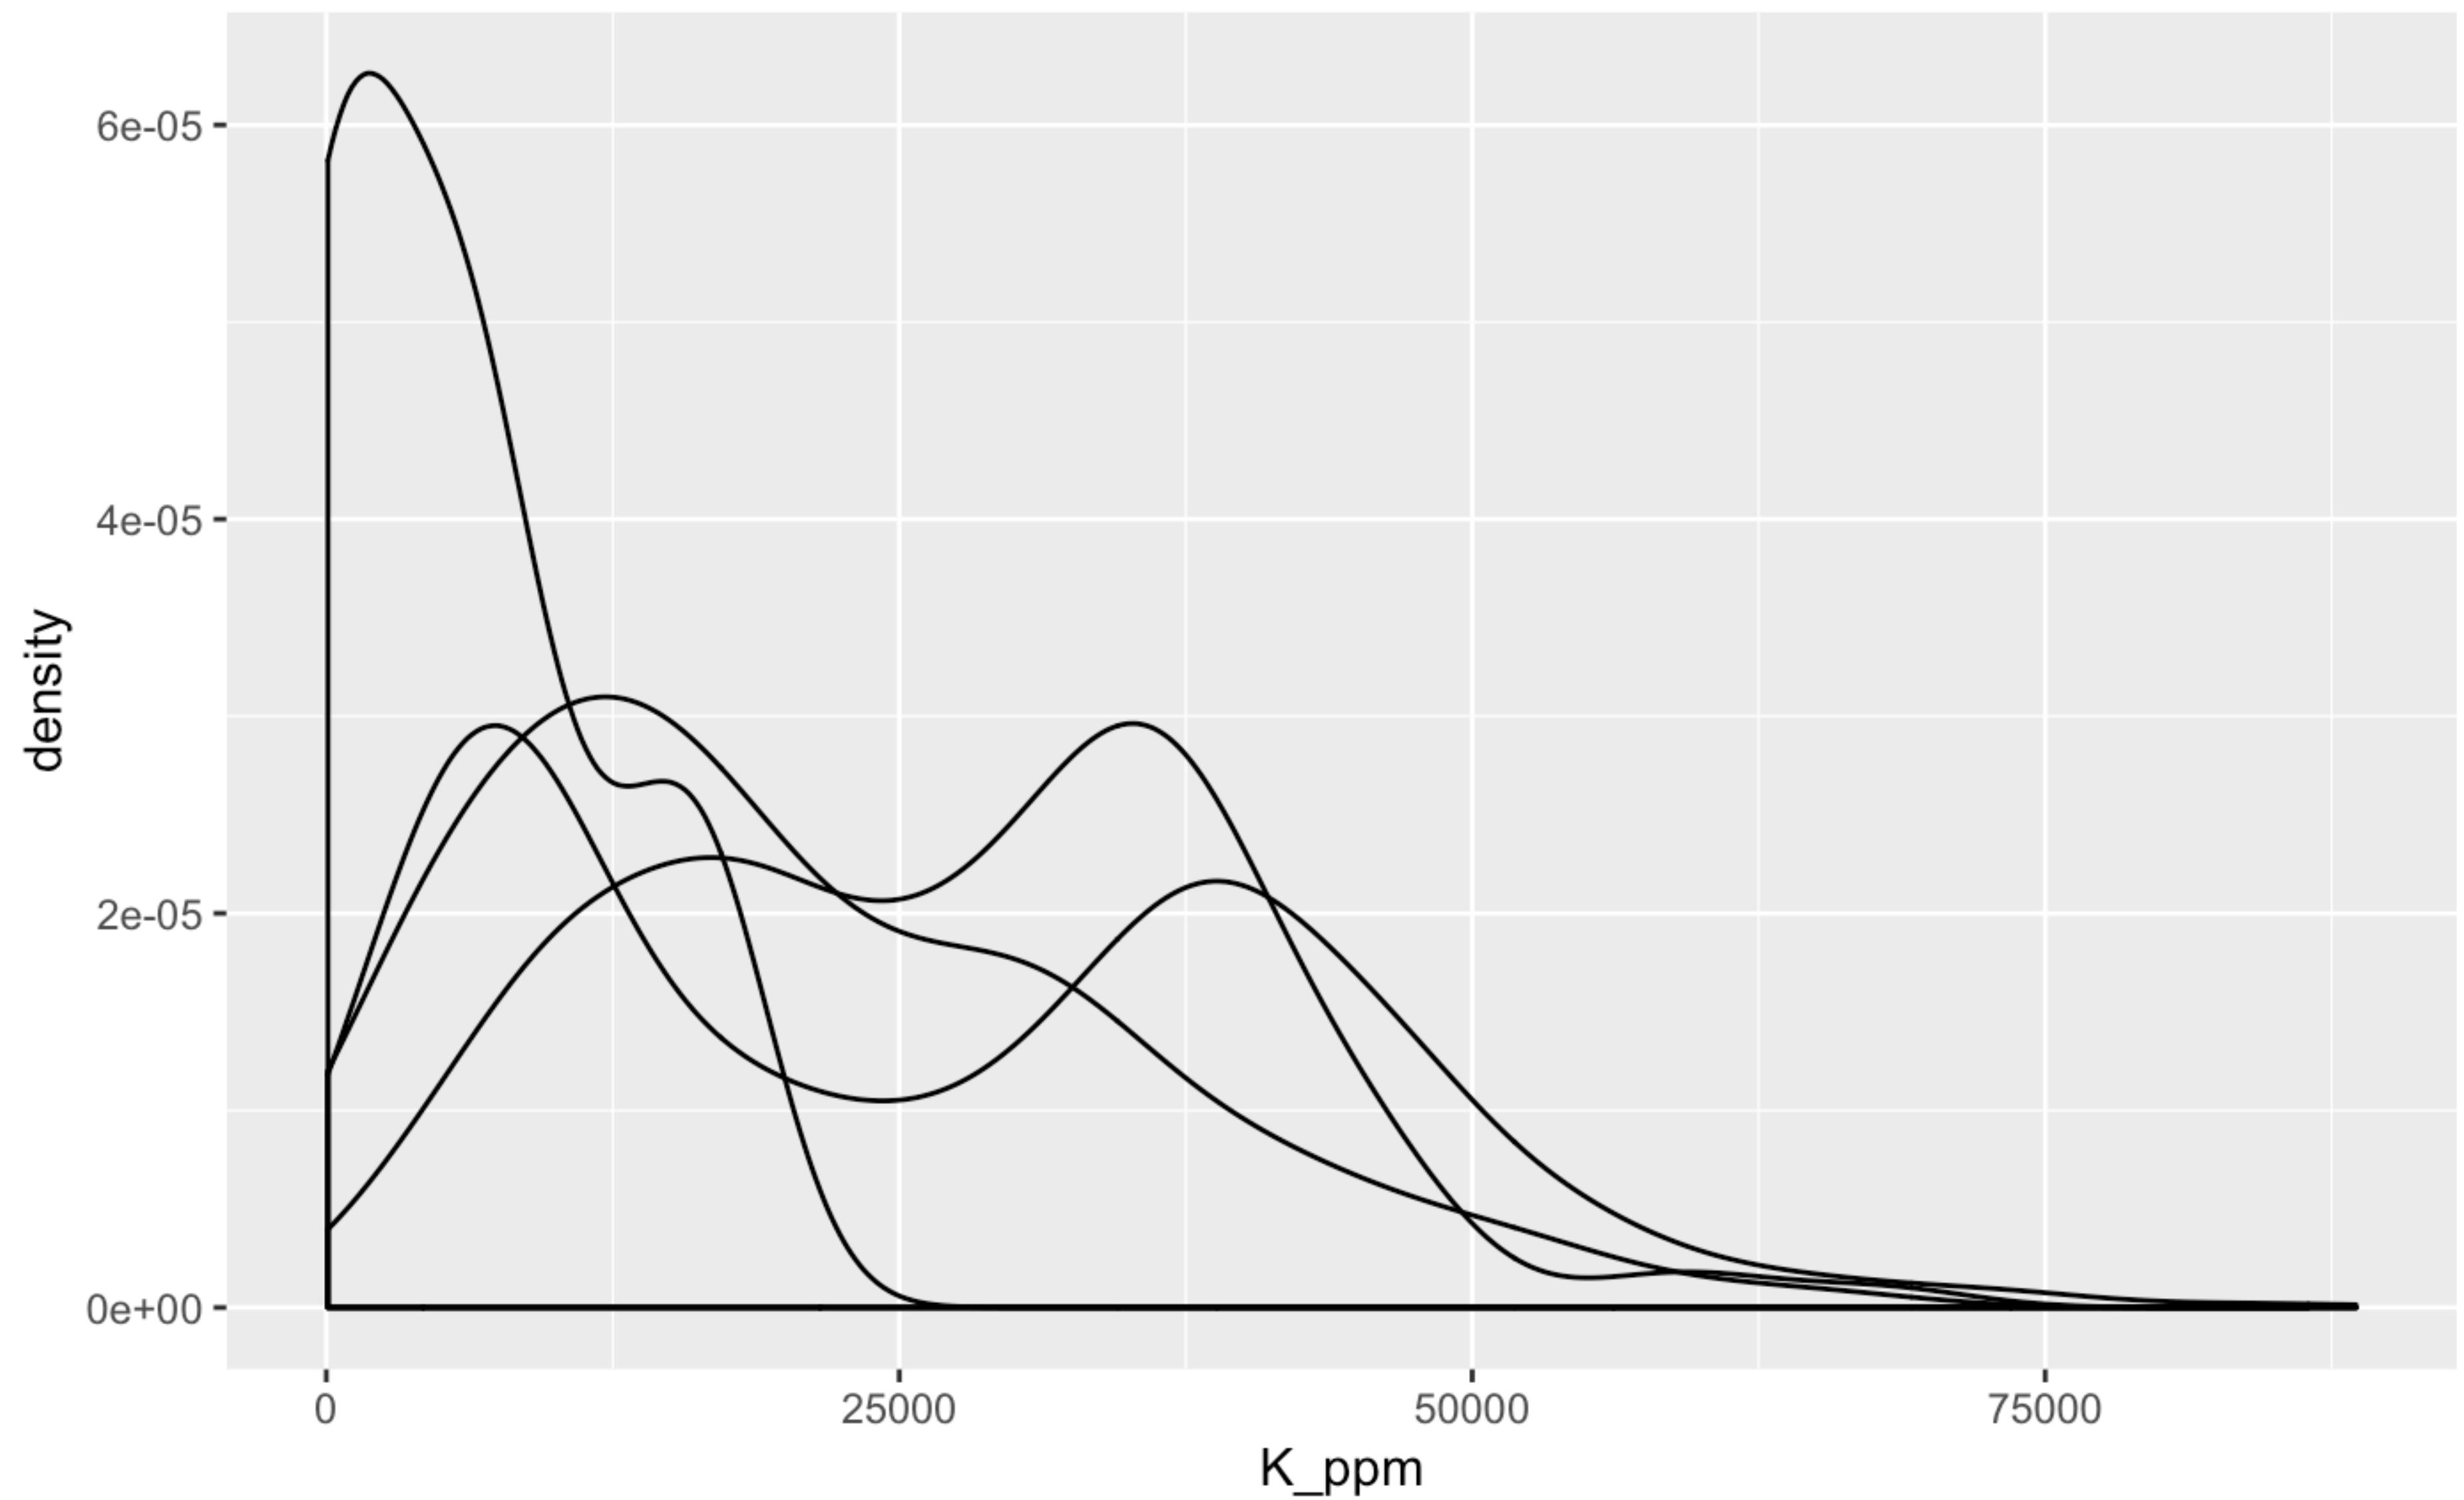

02 : 00

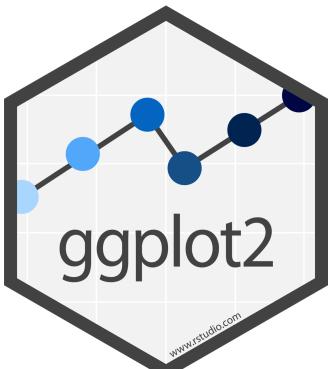

```
ggplot(data = warwick) +  
  geom_density(mapping = aes(x = K_ppm, color = rock_type))
```

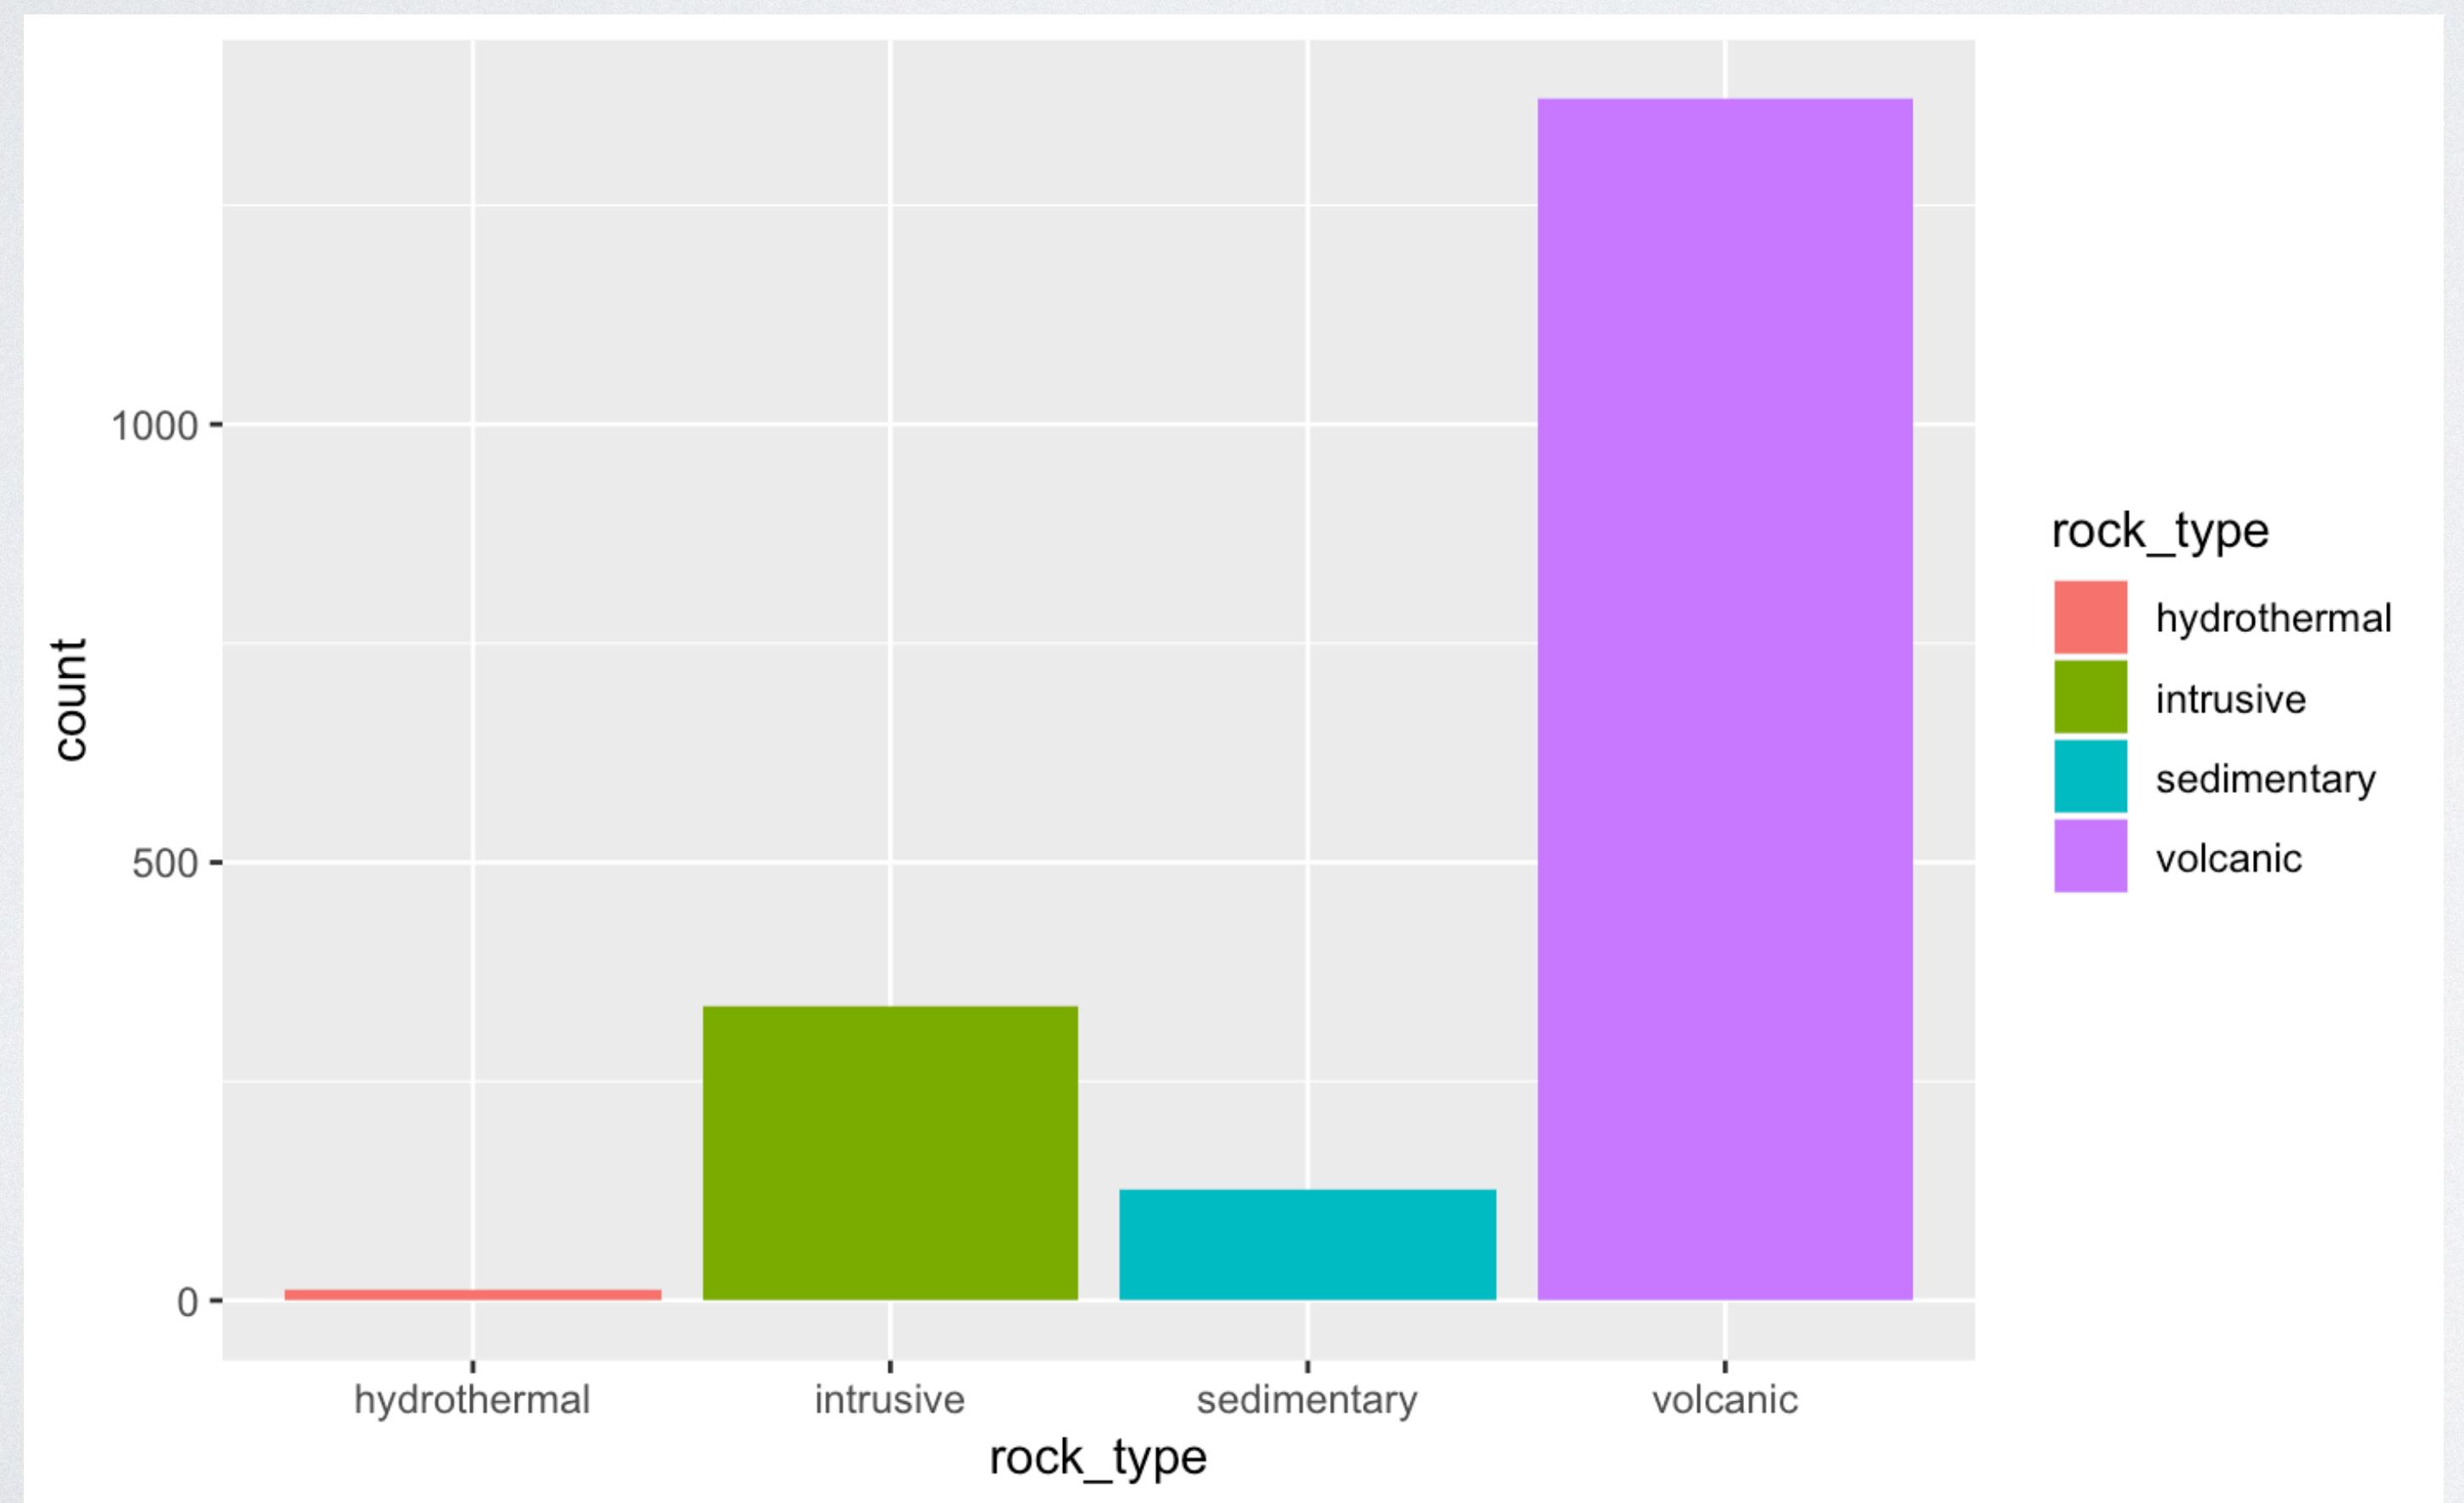

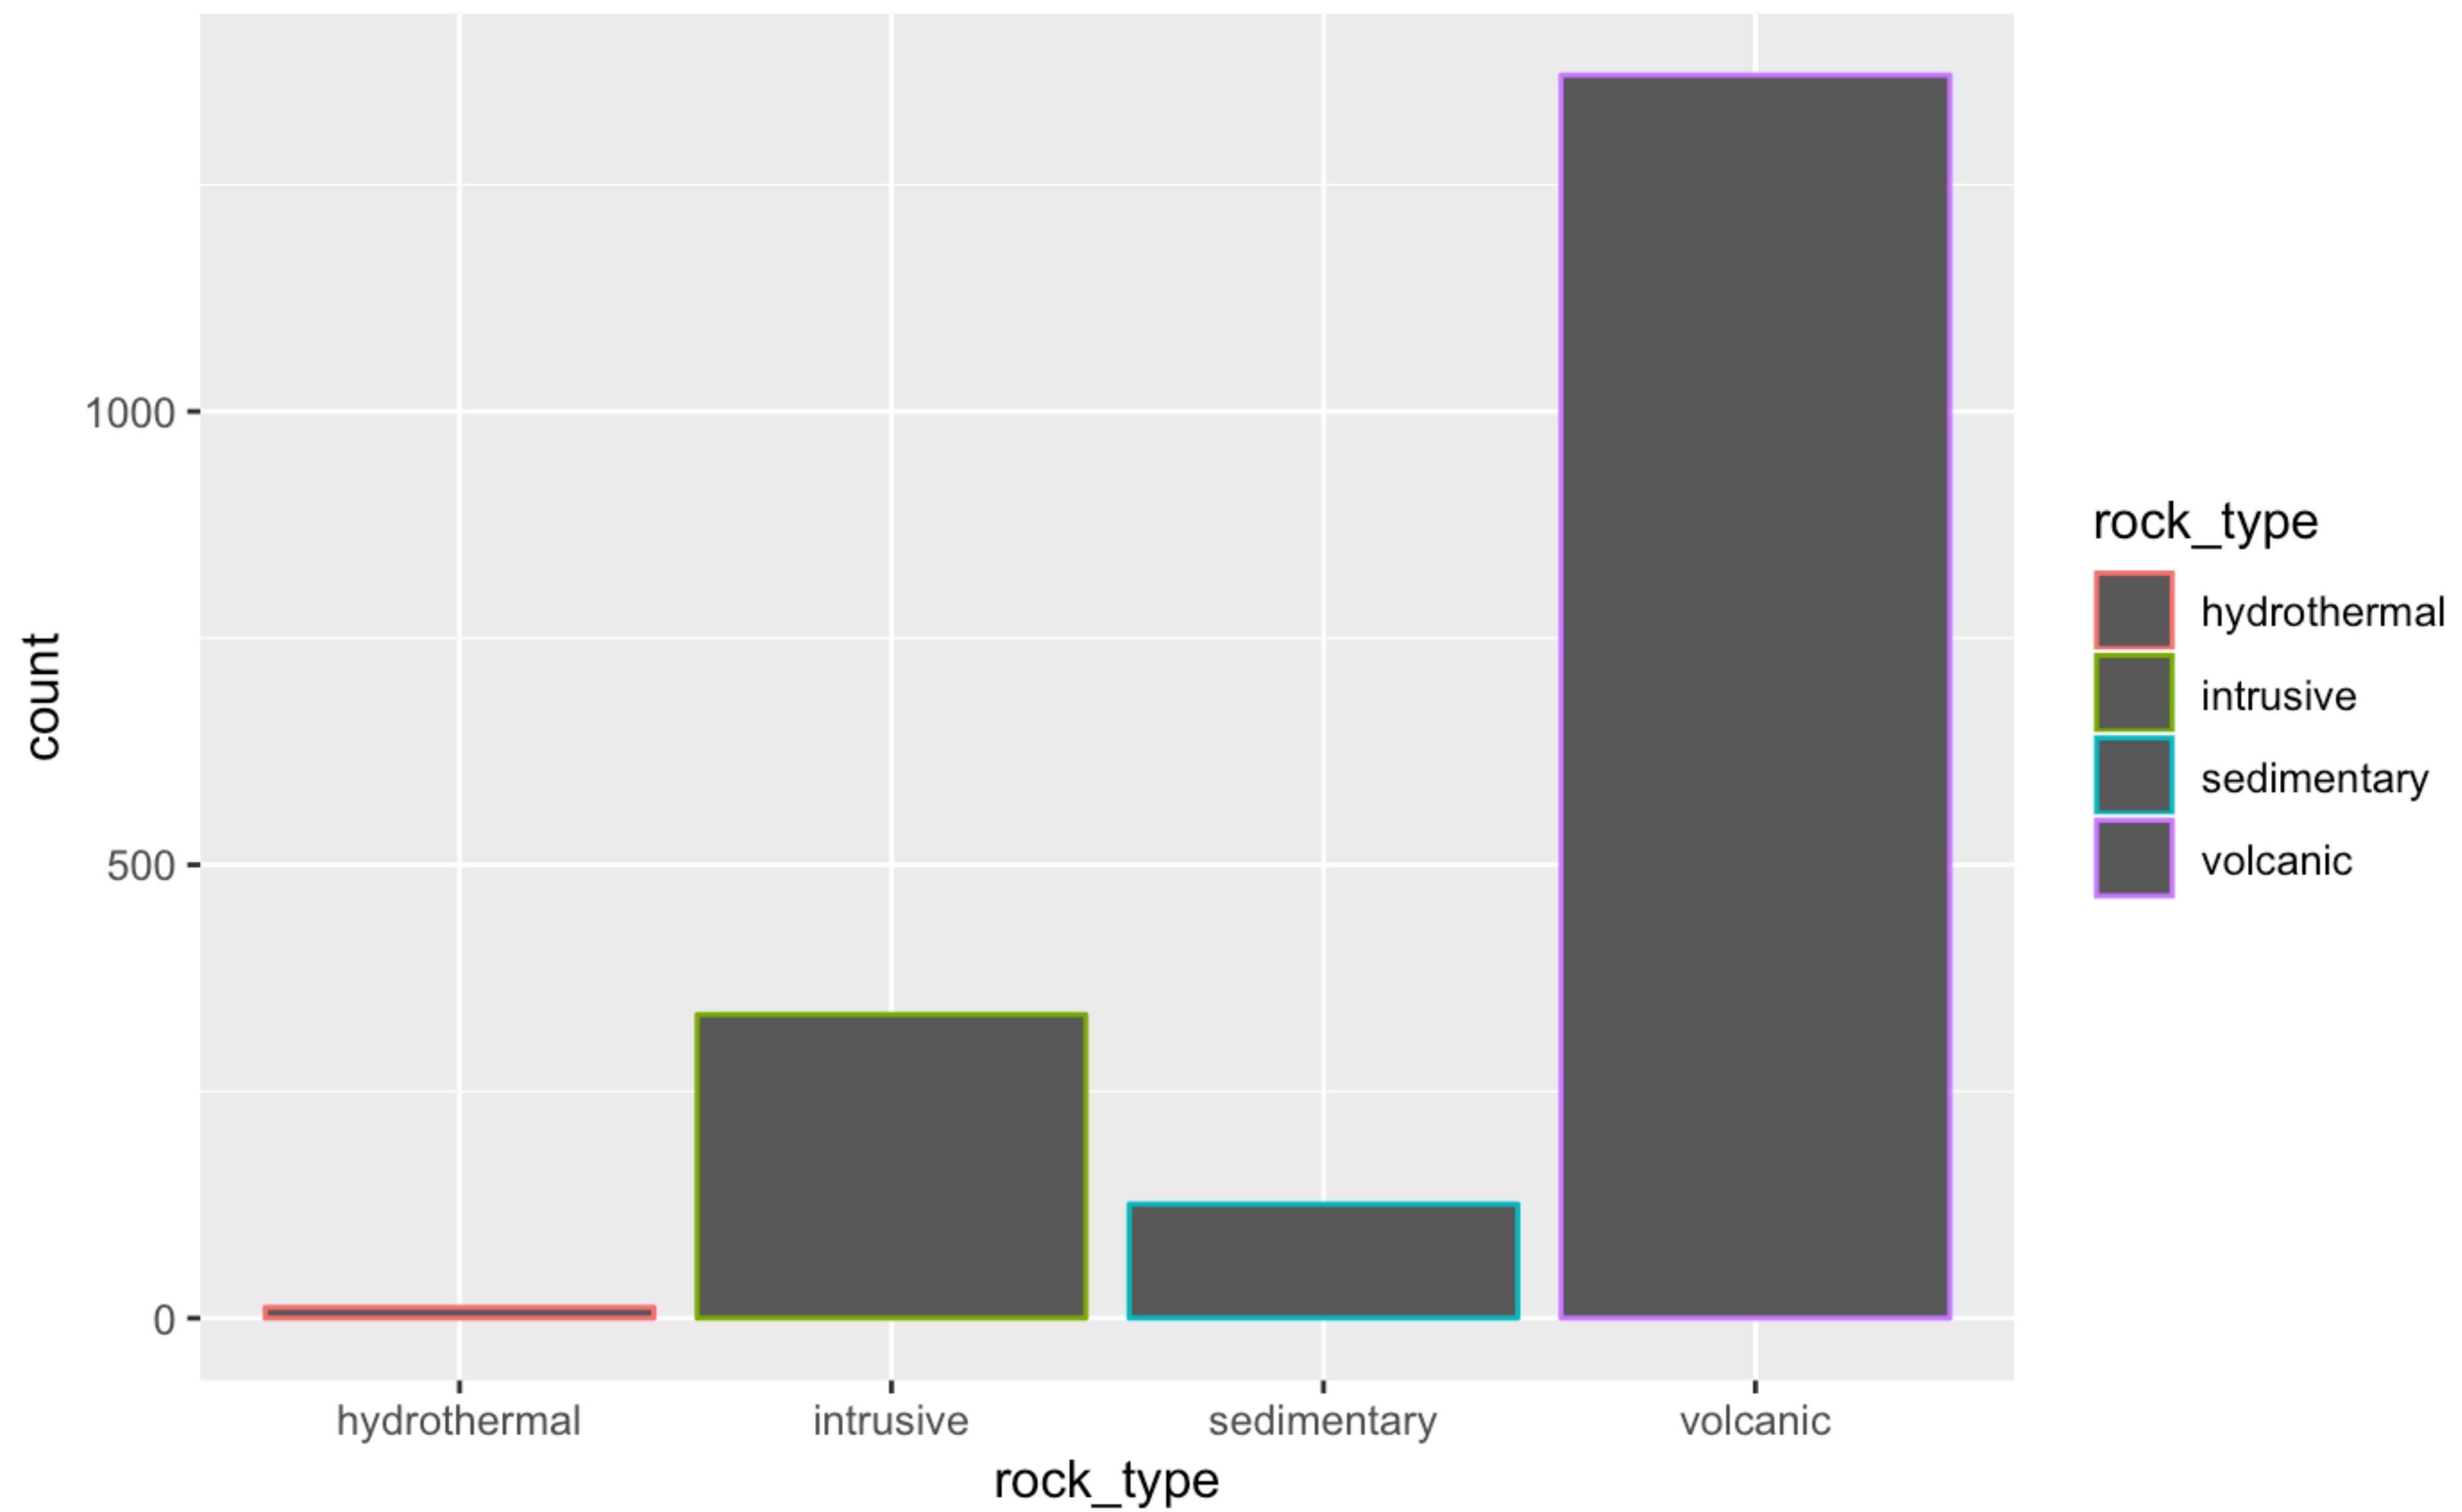

```
ggplot(data = warwick) +  
  geom_density(mapping = aes(x = K_ppm, group = rock_type))
```

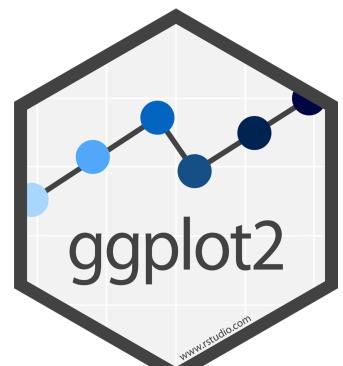

# Your Turn

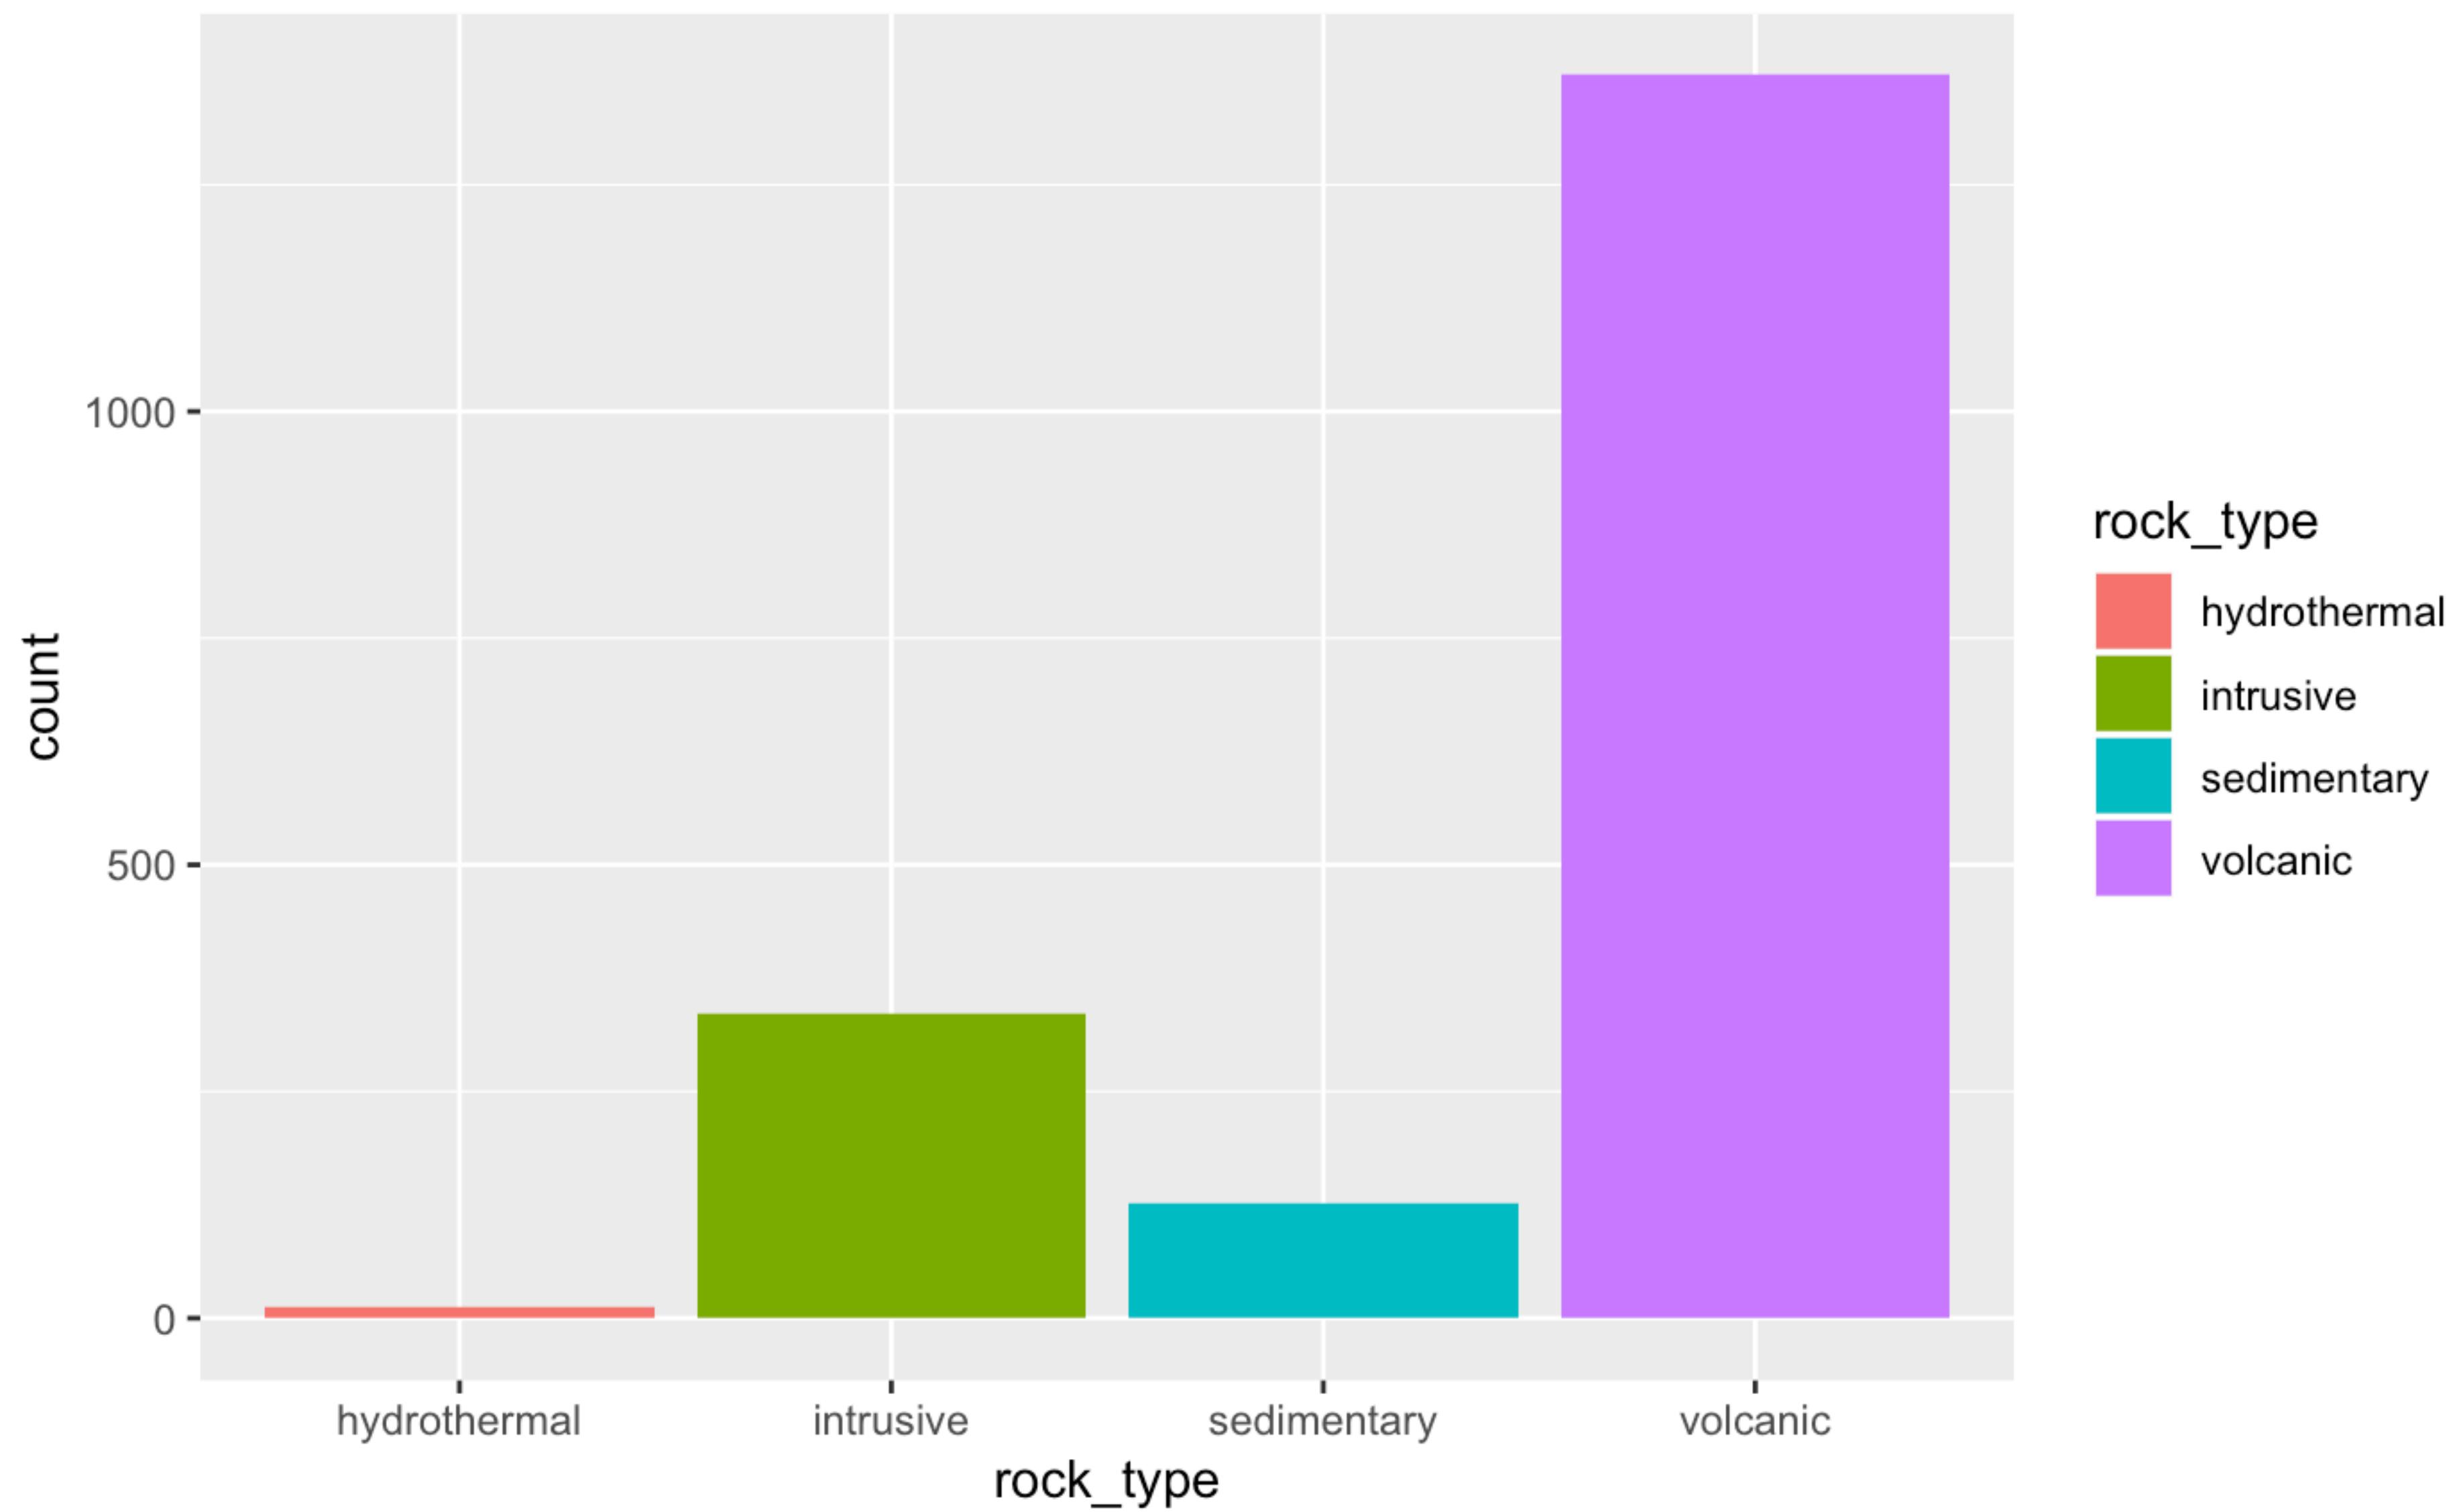

With your partner, make the bar chart of **rock\_type** colored by **rock\_type** below. Use the cheatsheet. Try your best guess.

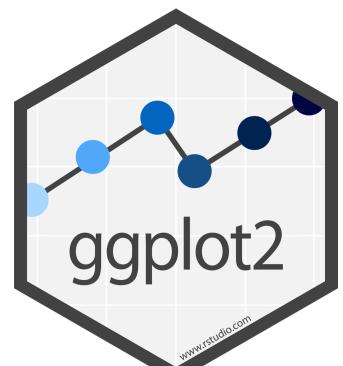

```
ggplot(data = warwick) +  
  geom_bar(mapping = aes(x = rock_type, color = rock_type))
```

```
ggplot(data = warwick) +  
  geom_bar(mapping = aes(x = rock_type, fill = class))
```

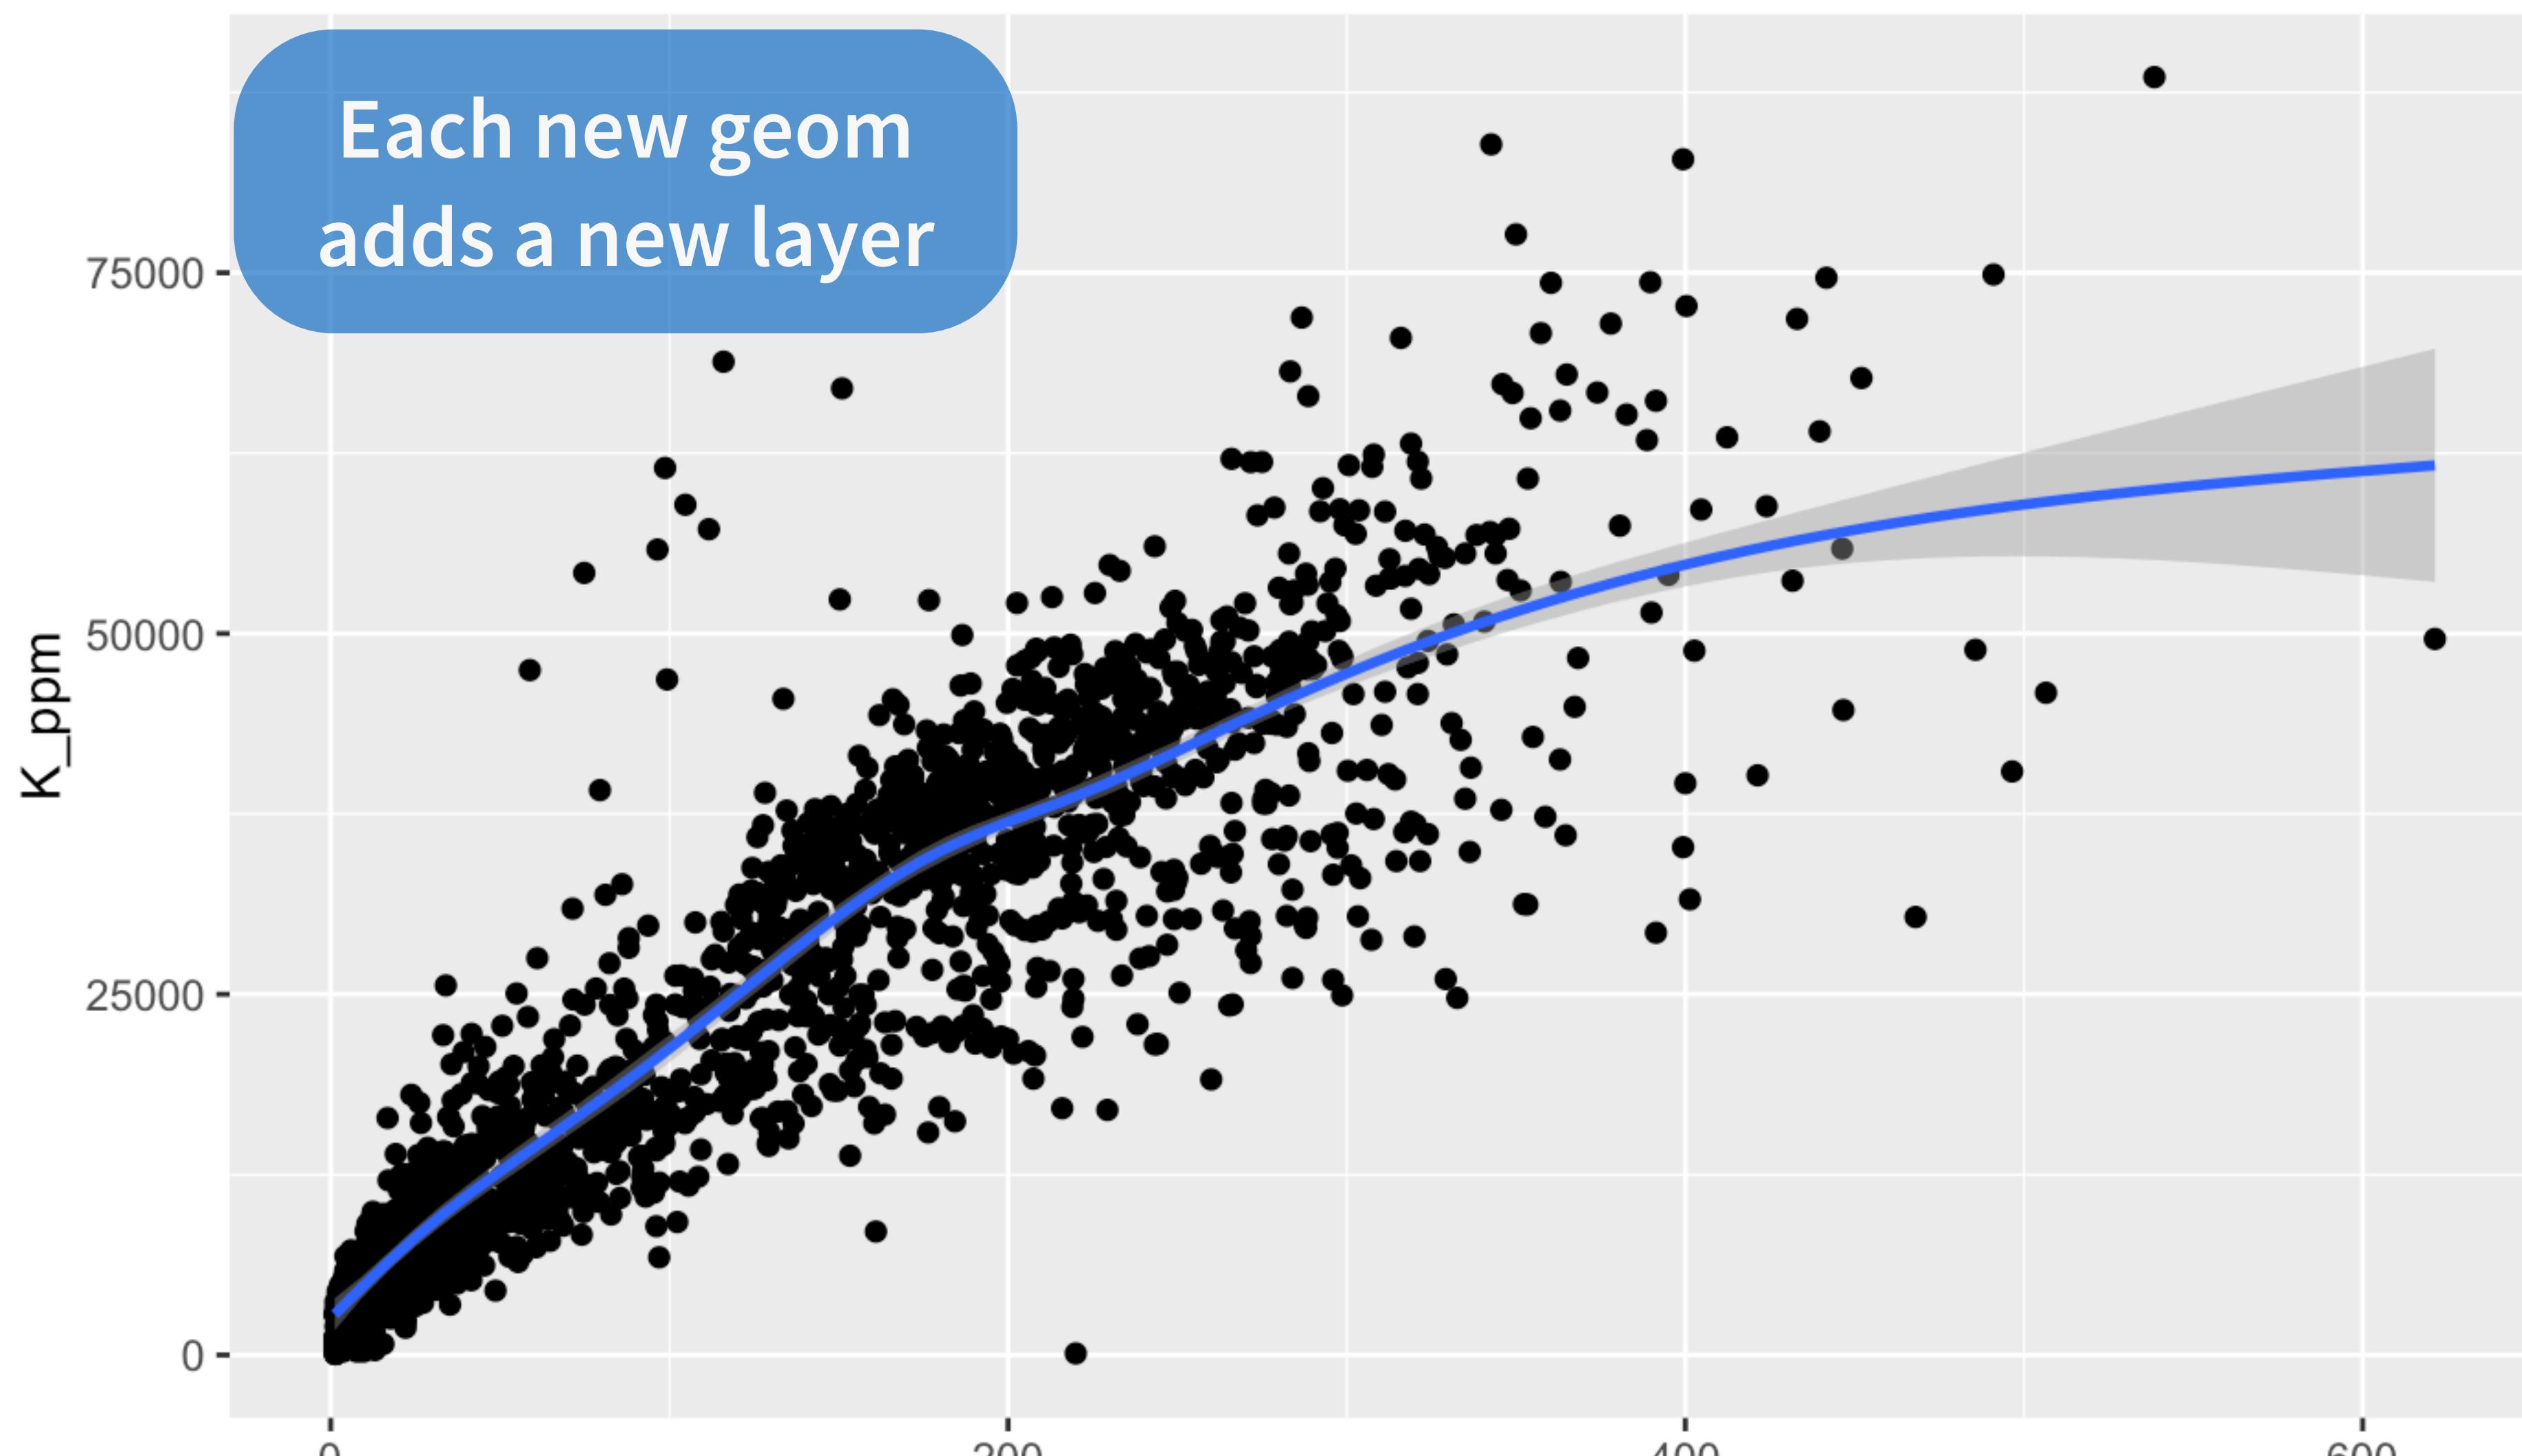

# Your Turn 7

With your partner, predict what this code will do.

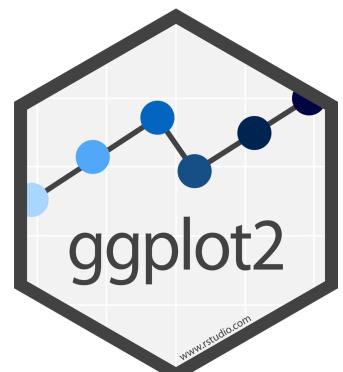

Then run it.

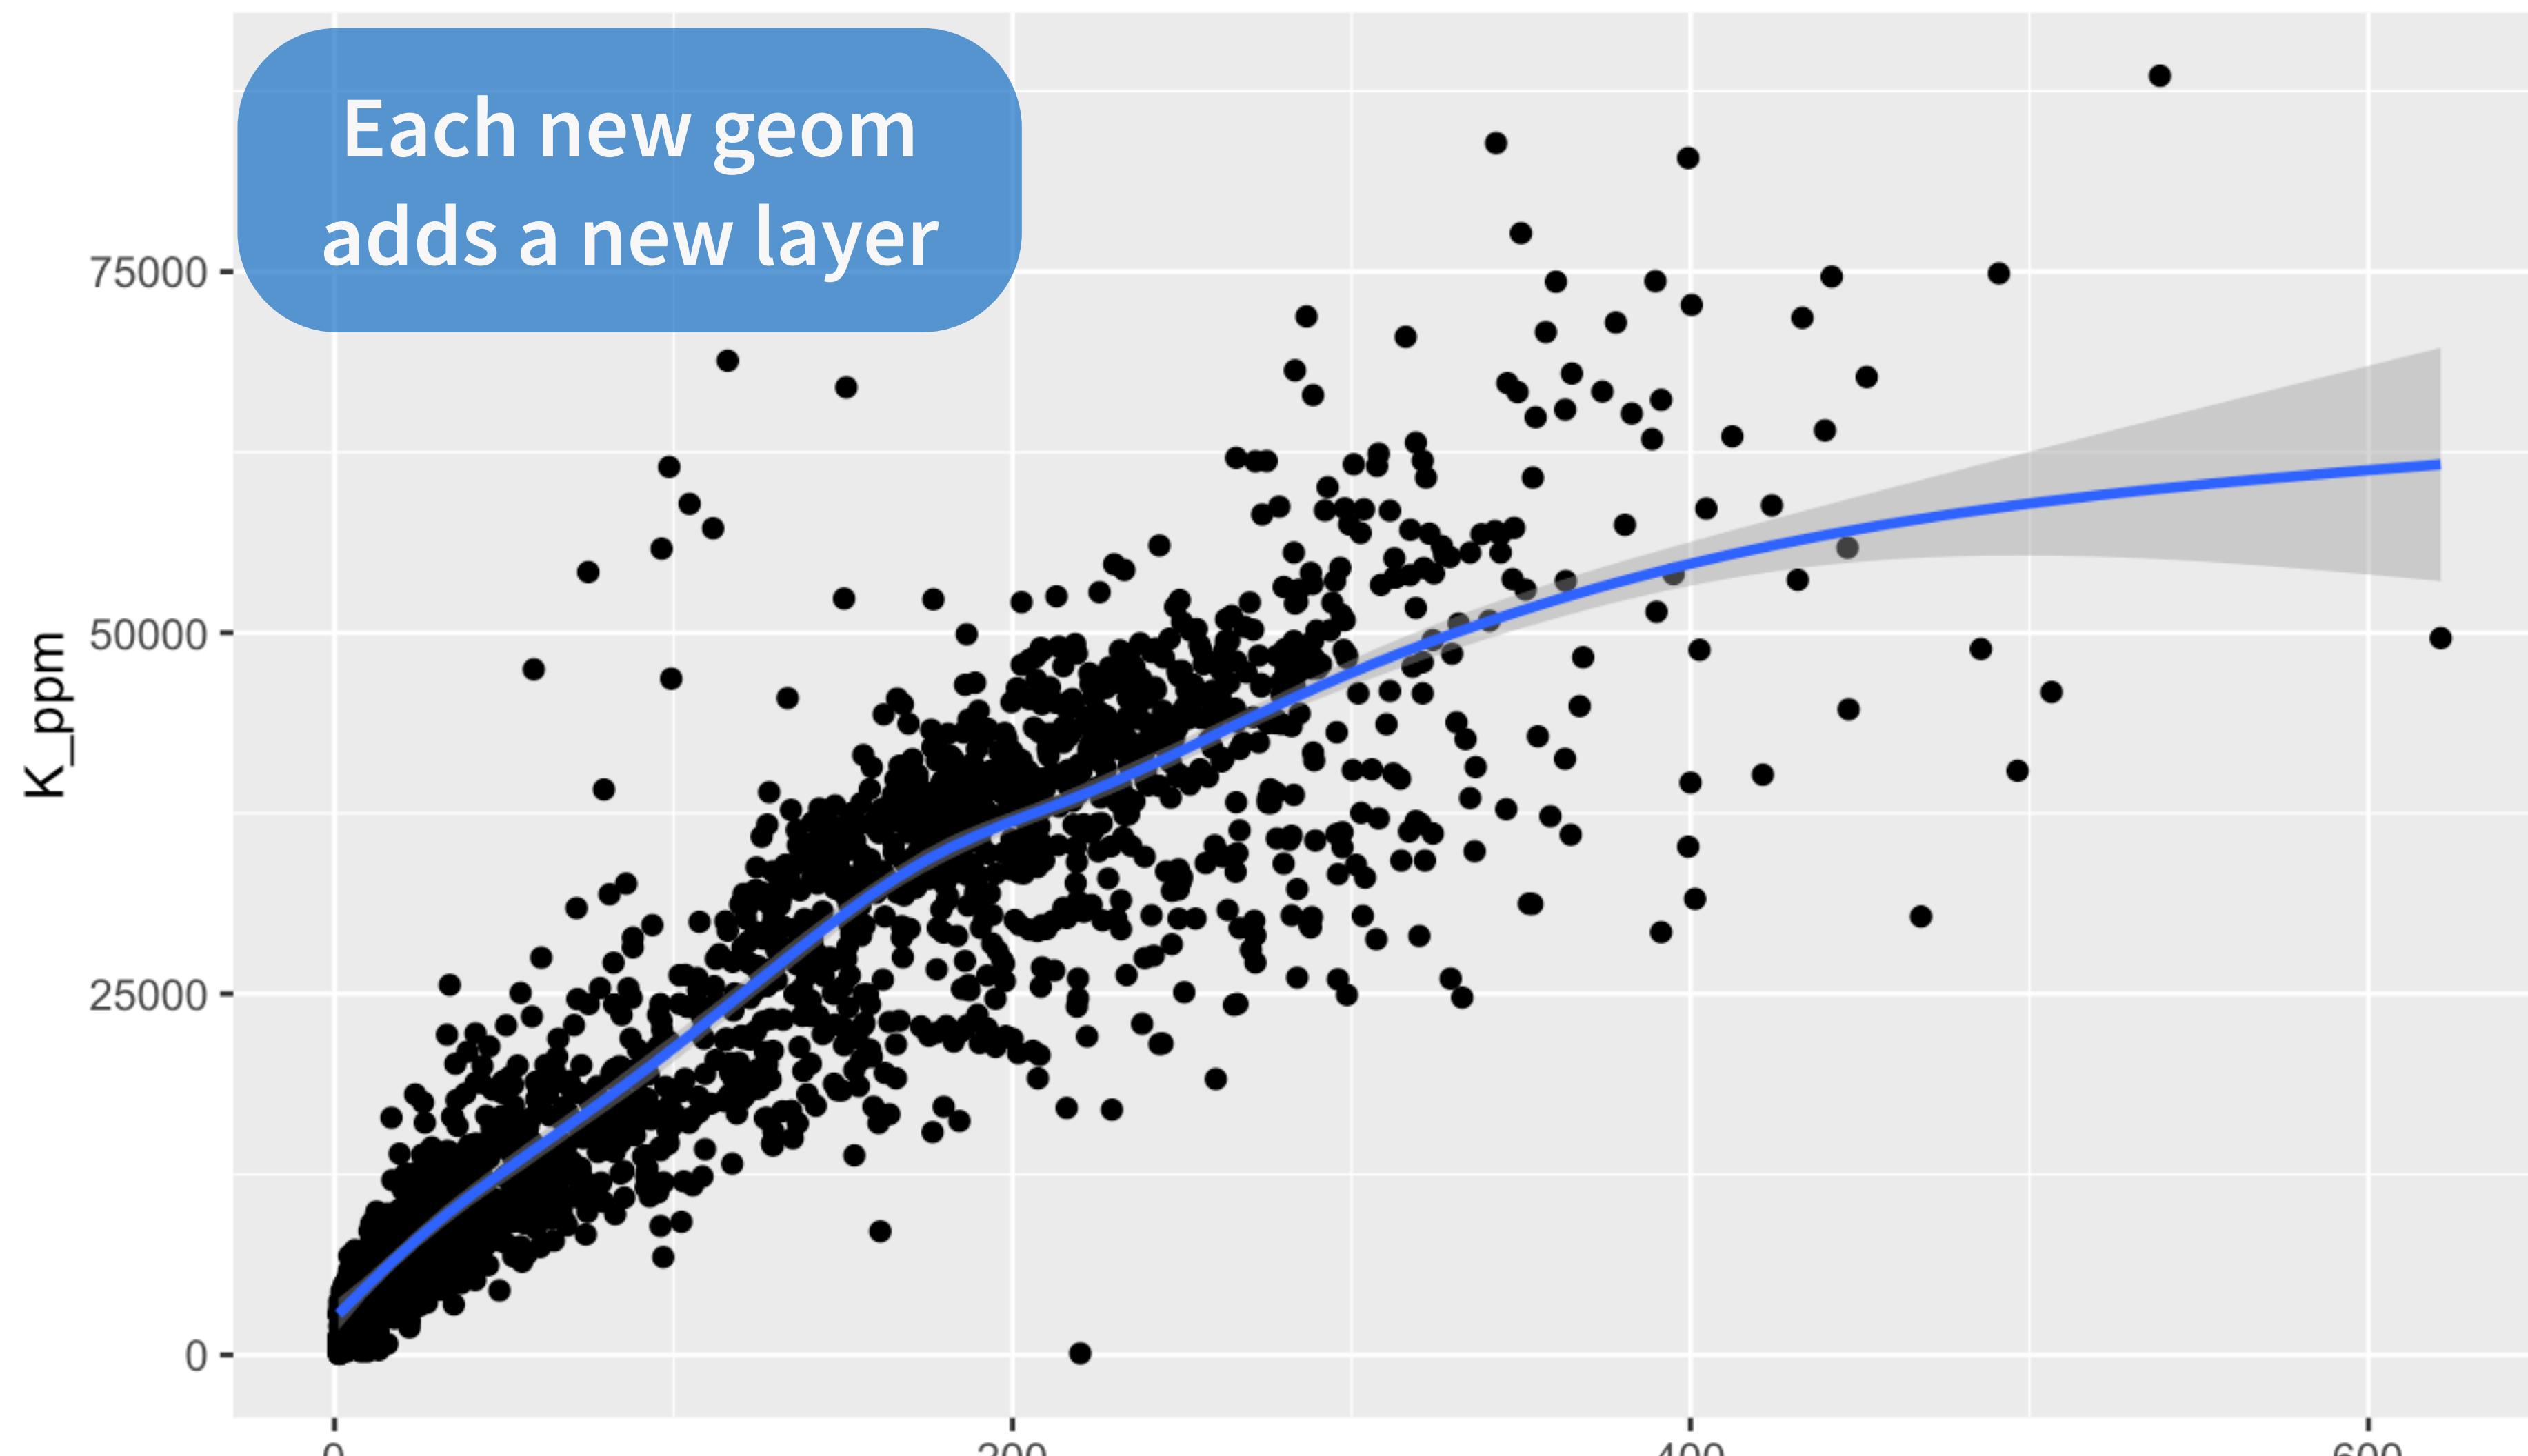

```
ggplot(warwick) +  
  geom_point(aes(Rb_ppm, K_ppm)) +  
  geom_smooth(aes(Rb_ppm, K_ppm))
```

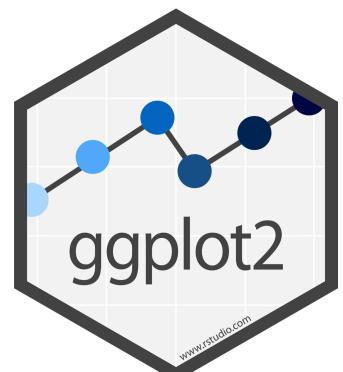

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm)) +  
  geom_smooth(mapping = aes(x = Rb_ppm, y = K_ppm))
```

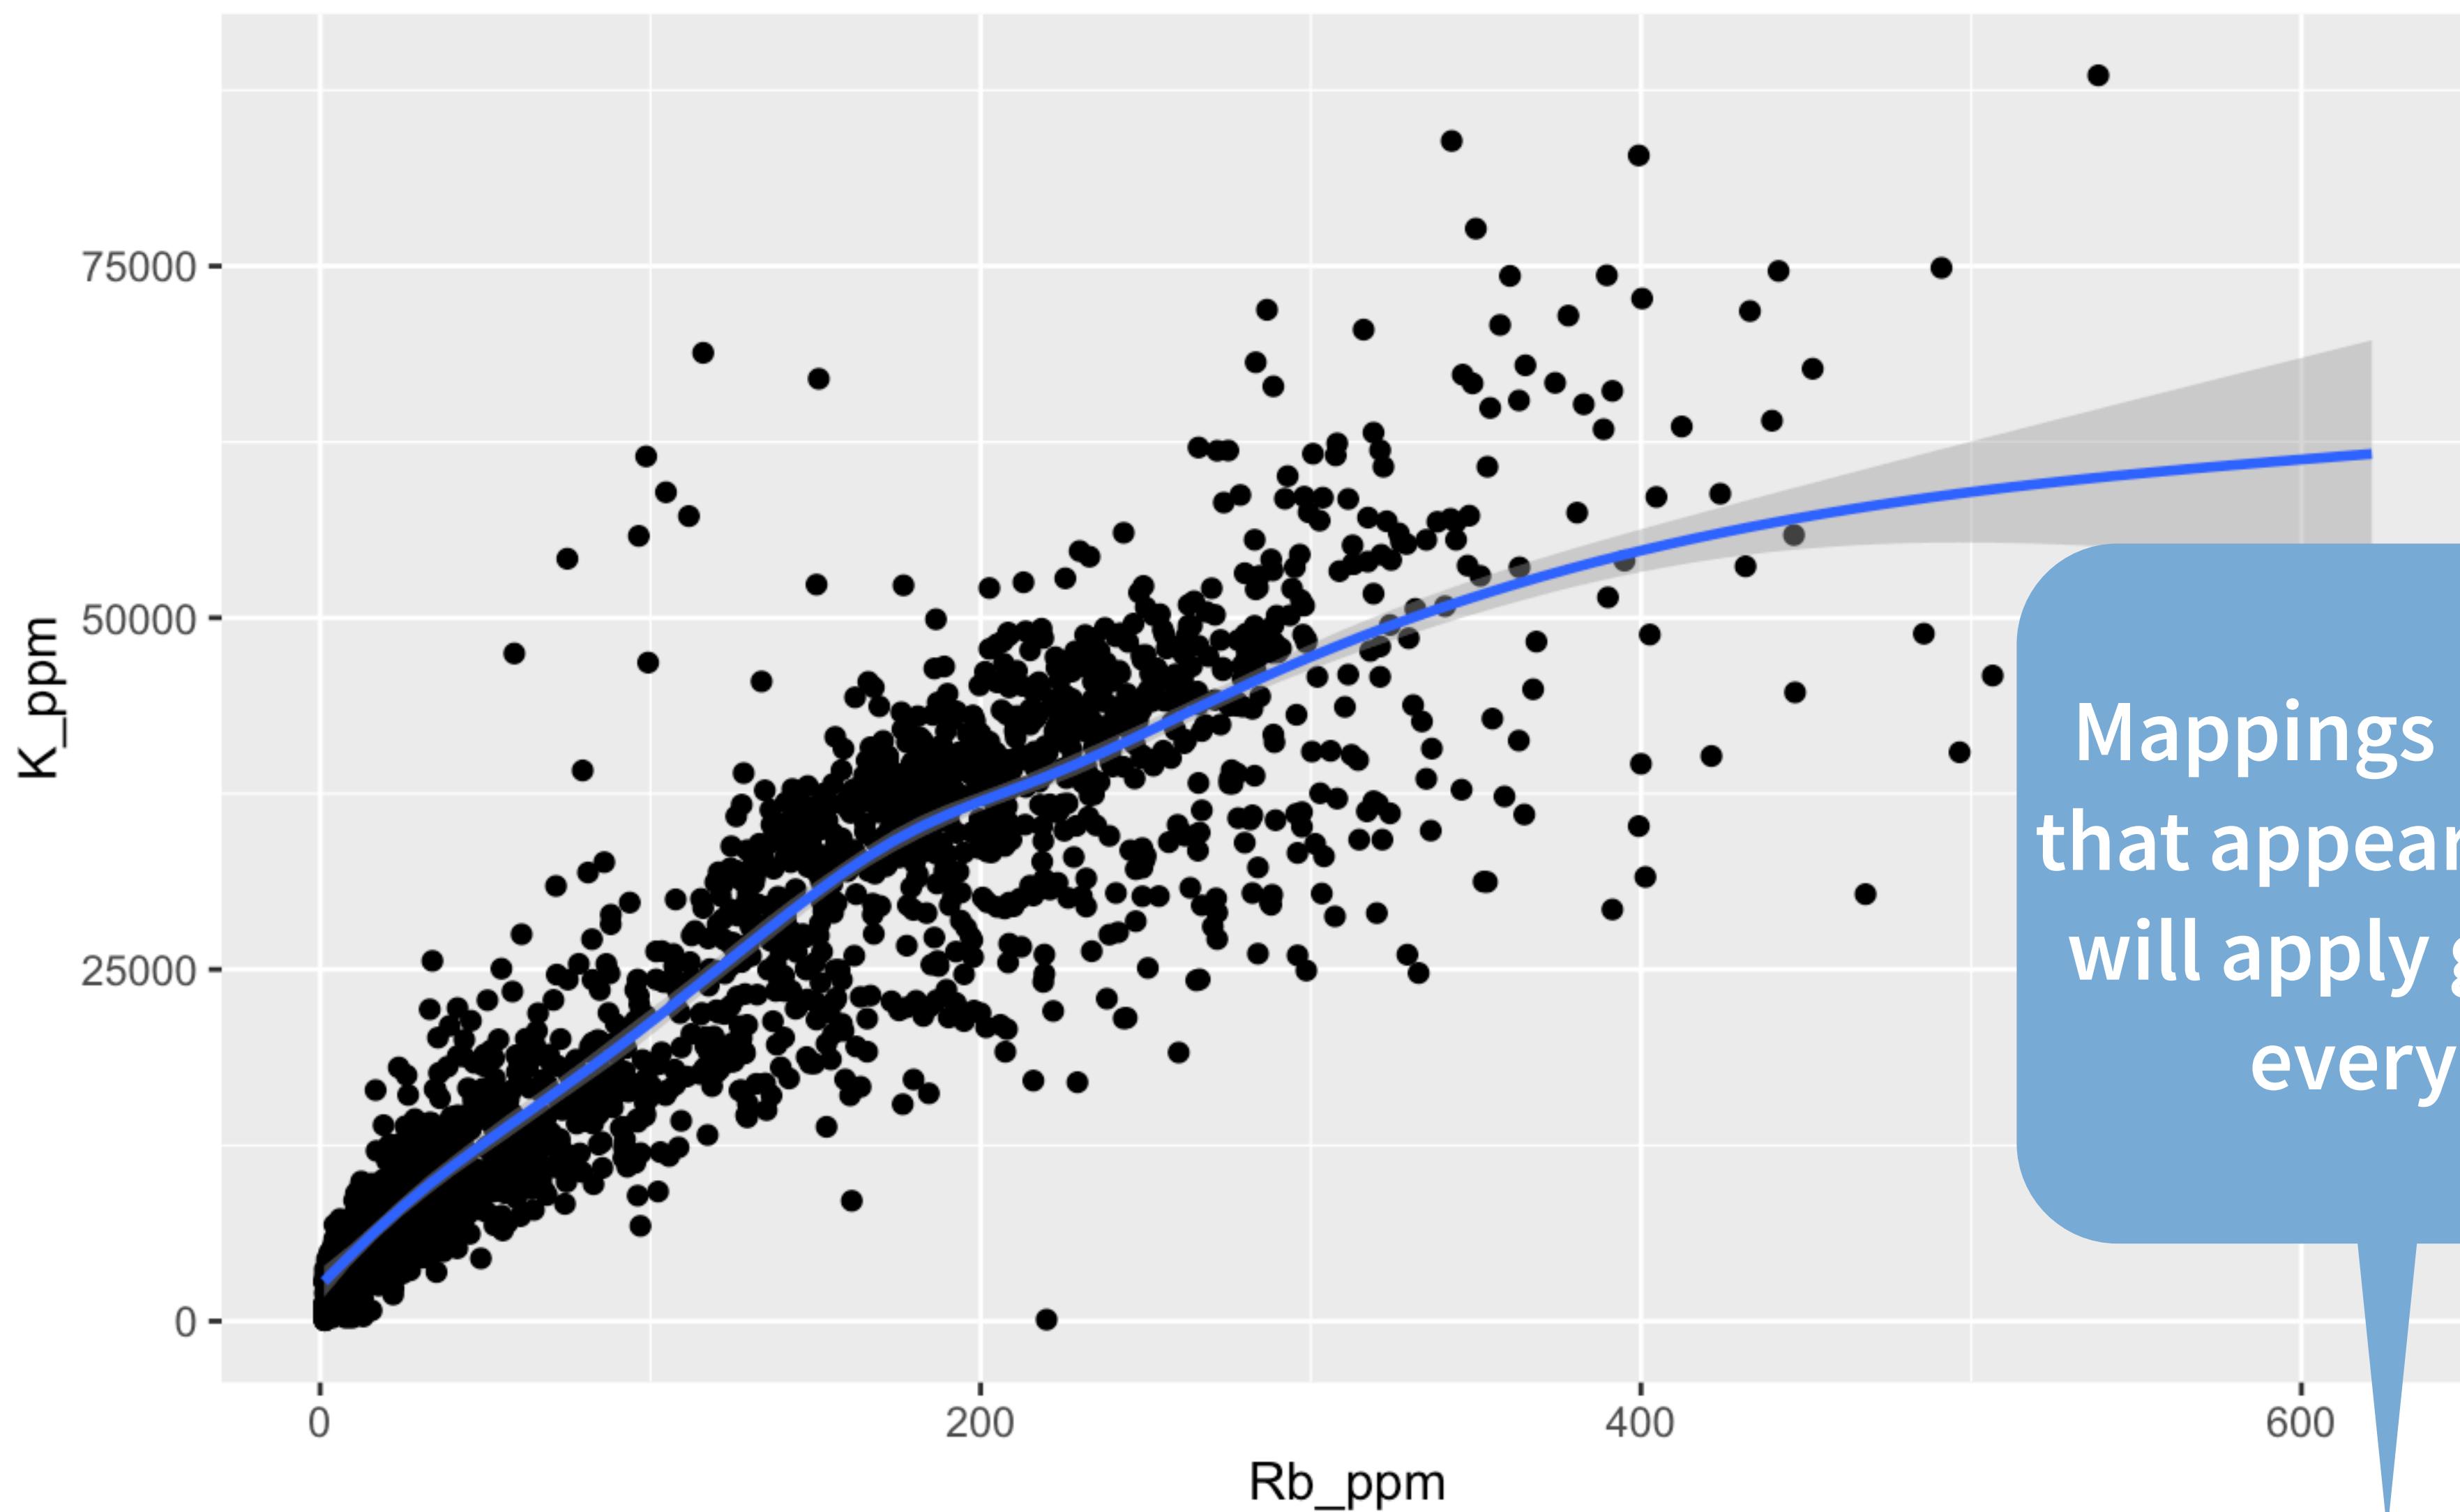

```
ggplot(data = warwick) +  
  geom_point(mapping = aes(x = Rb_ppm, y = K_ppm)) +  
  geom_smooth(mapping = aes(x = Rb_ppm, y = K_ppm))
```

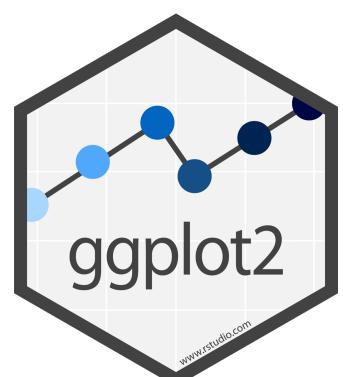

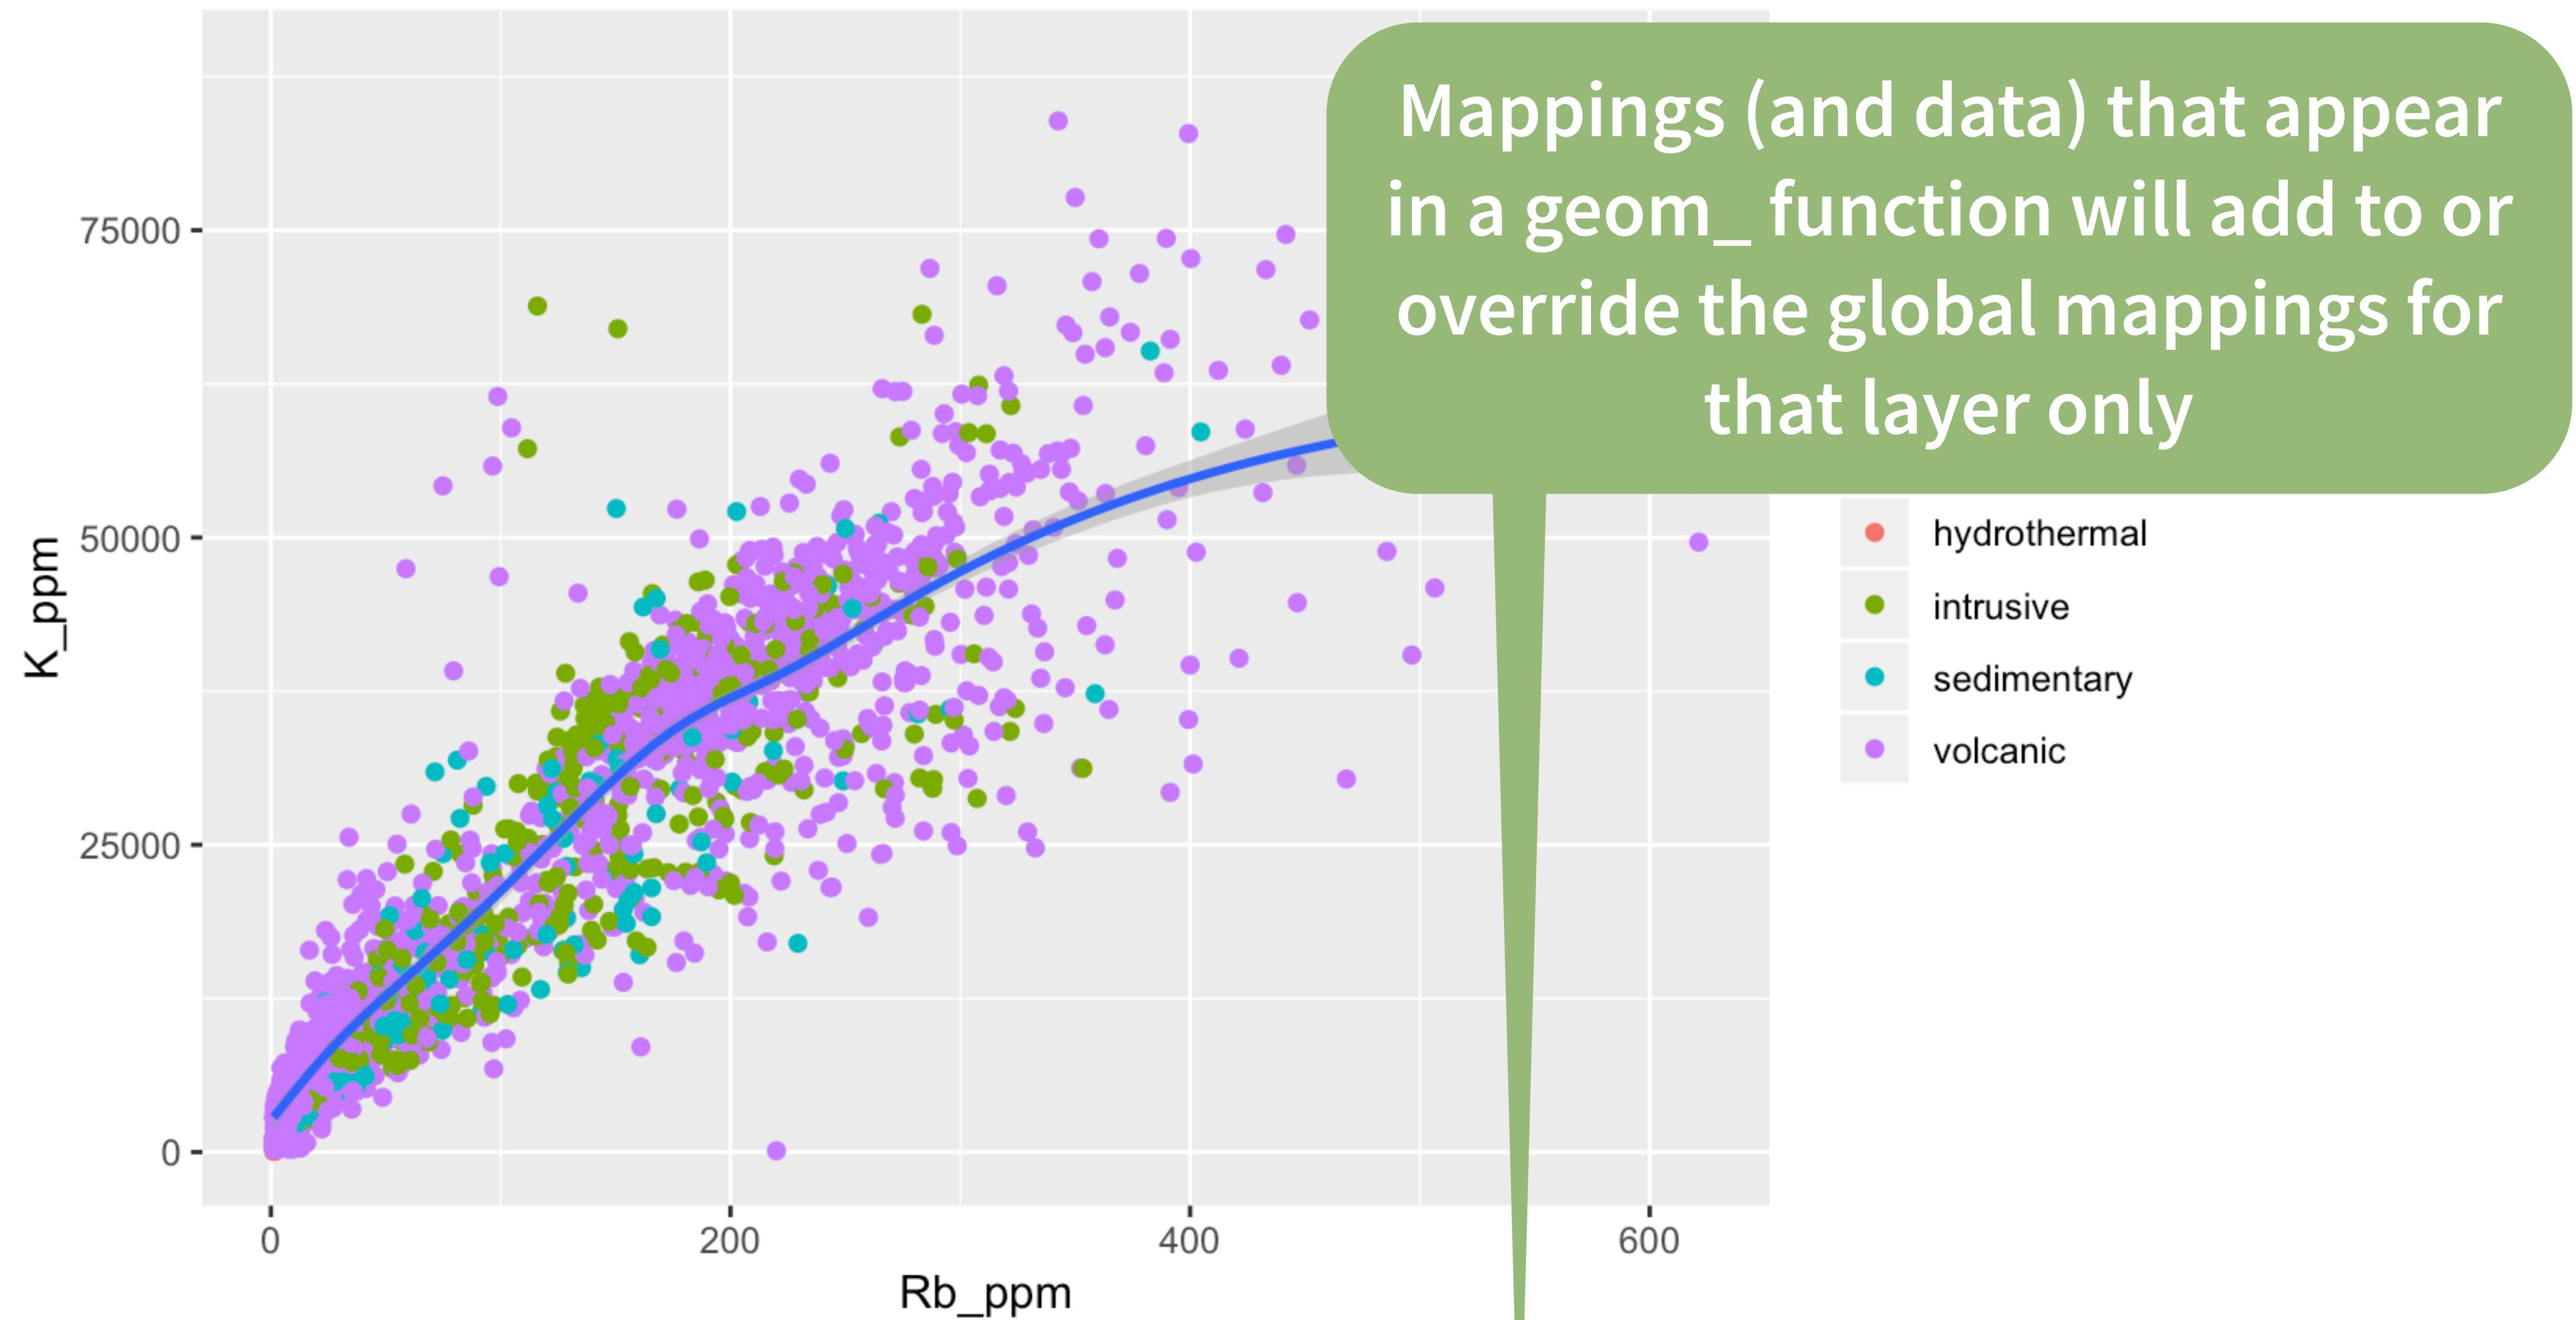

# global vs. local

R

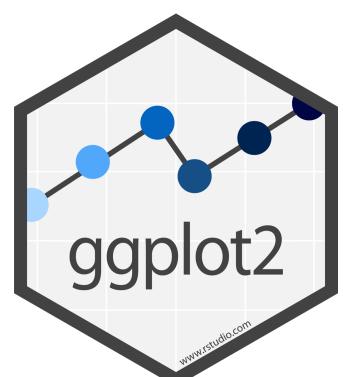

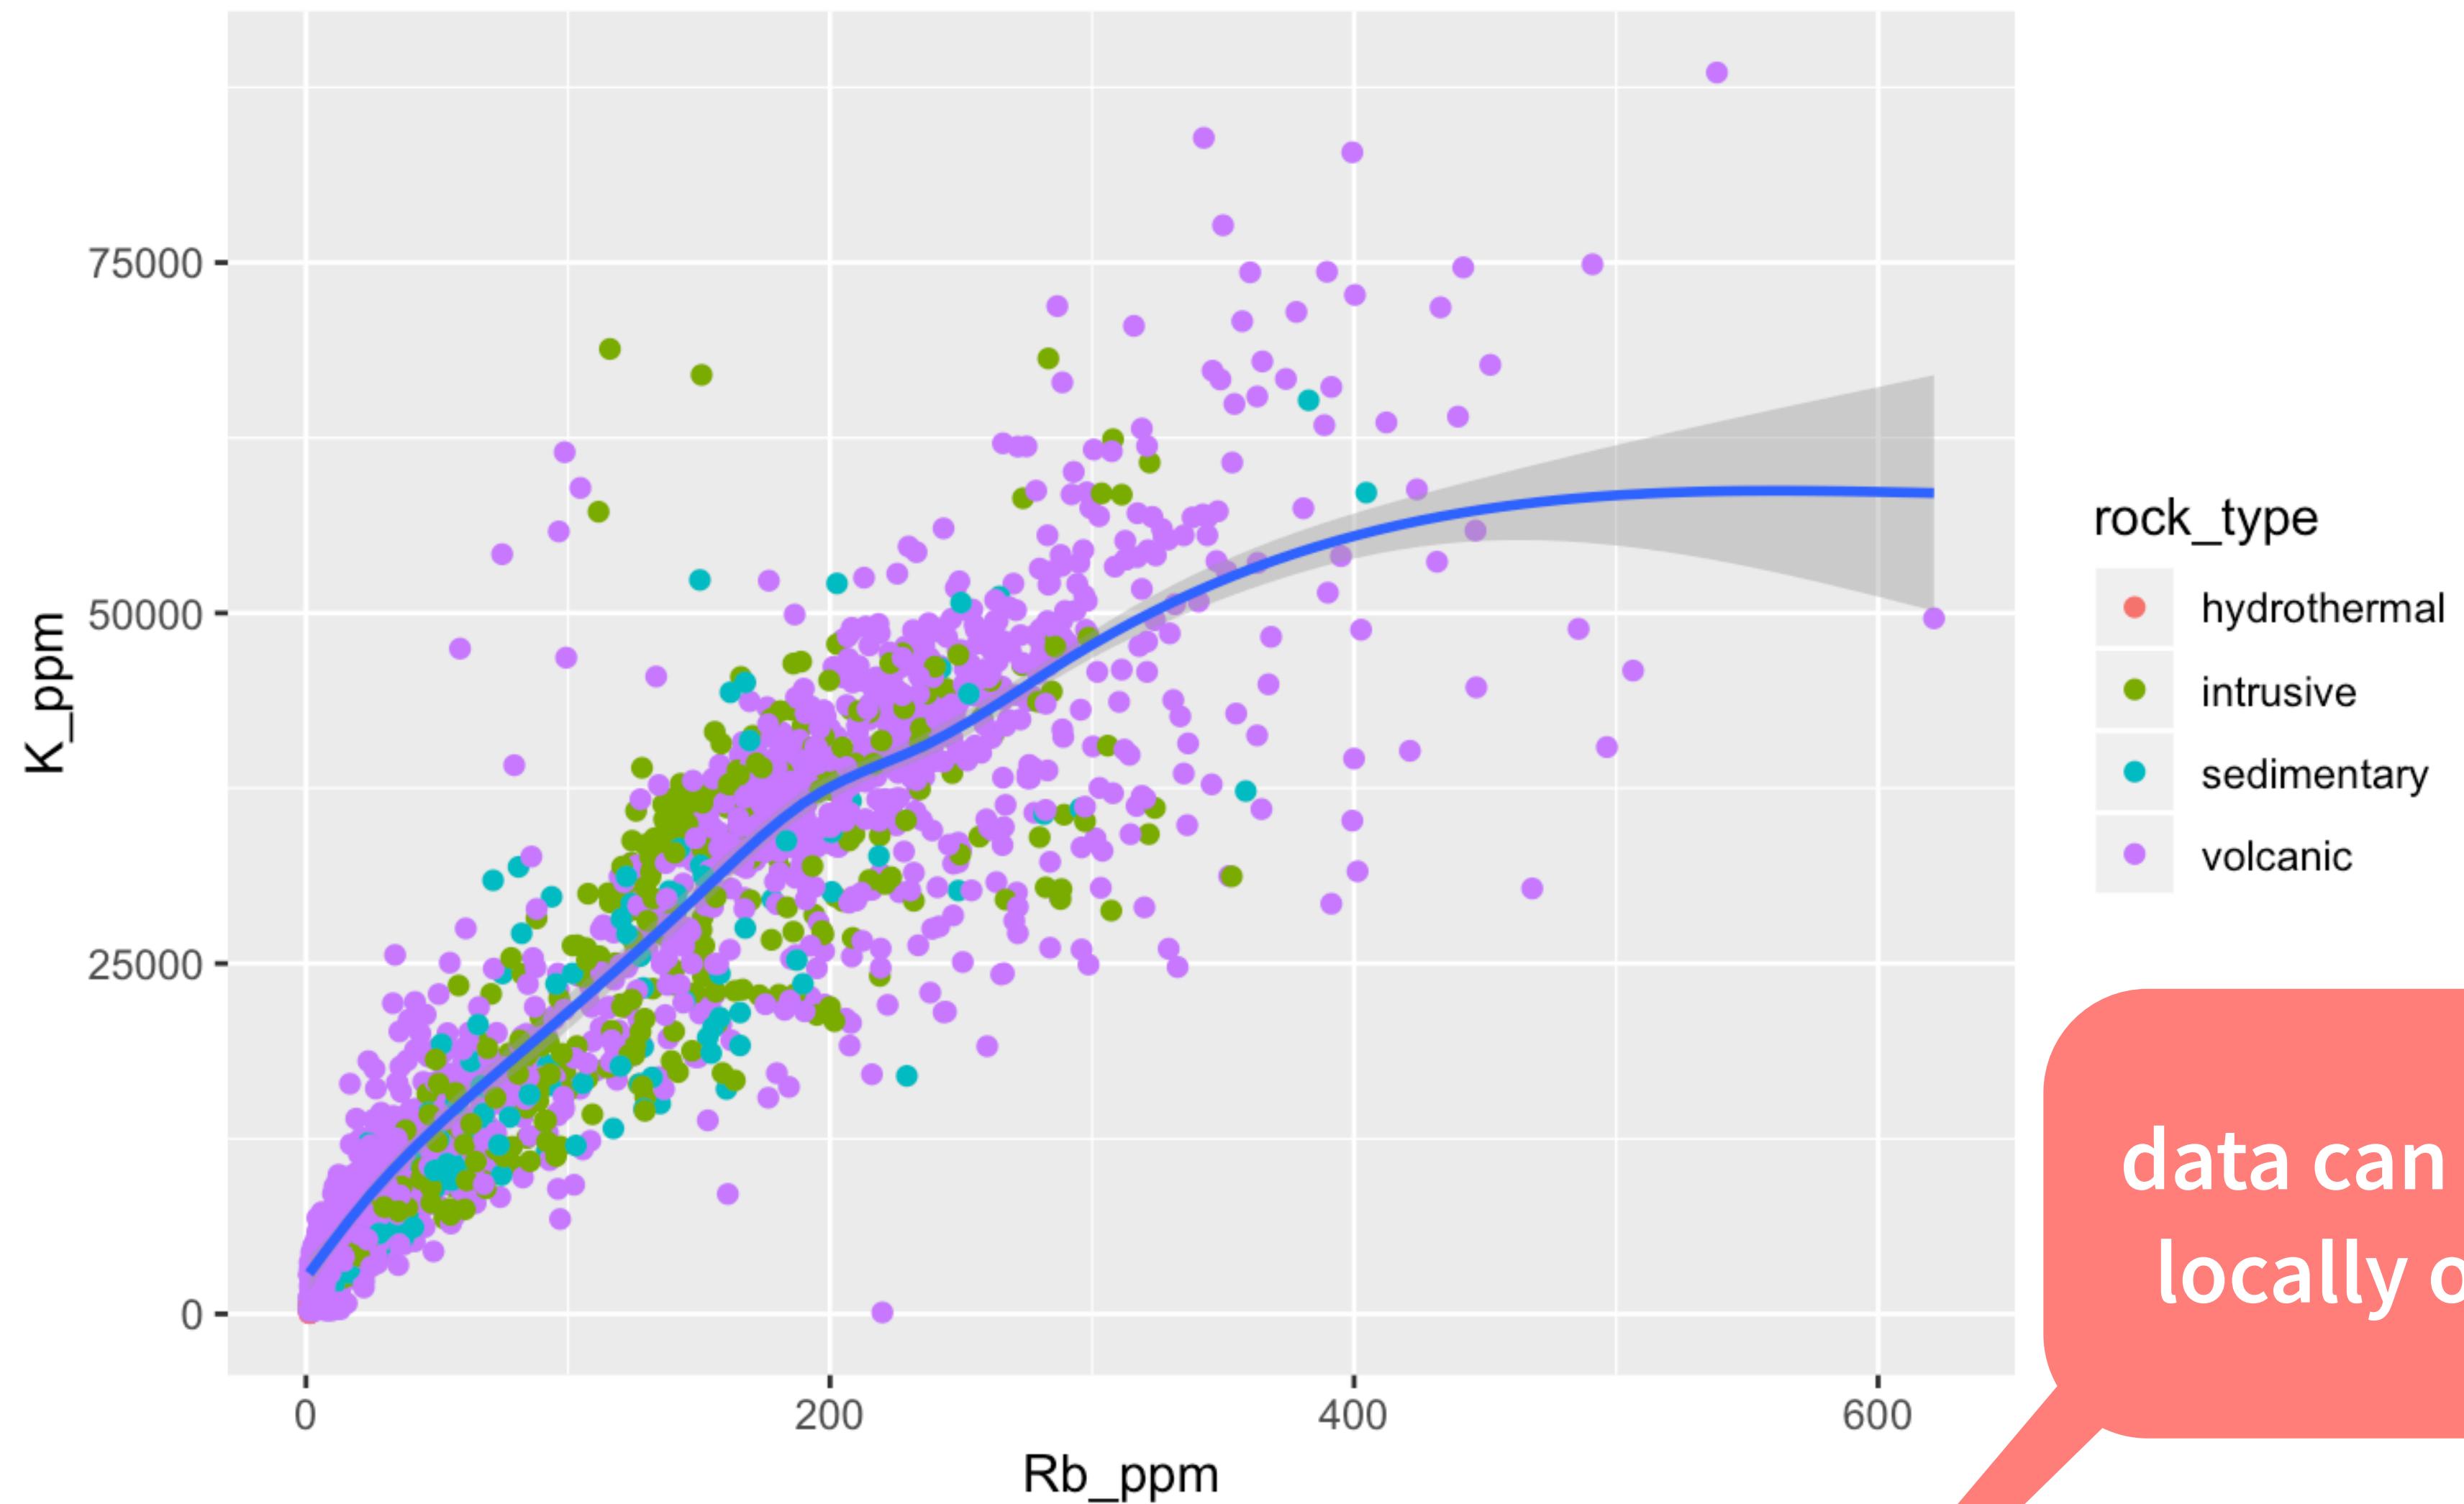

```
ggplot(data = warwick, mapping = aes(x = Rb_ppm, y = K_ppm)) +  
  geom_point() +  
  geom_smooth()
```

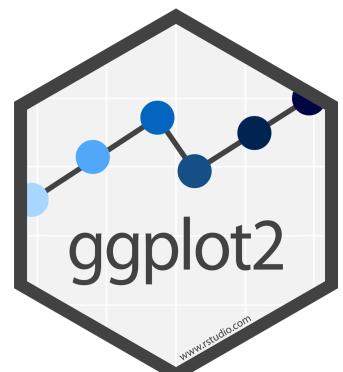

```
ggplot(data = warwick, mapping = aes(x = Rb_ppm, y = K_ppm)) +
  geom_point(mapping = aes(color = rock_type)) +
  geom_smooth()
```

```
ggplot(data = warwick, mapping = aes(x = Rb_ppm, y = K_ppm)) +  
  geom_point(mapping = aes(color = rock_type)) +  
  geom_smooth(data = filter(warwick, rock_type == "volcanic"))
```

data can also be set  
locally or globally

# Saving graphs

# Your Turn 7

What does this command return?

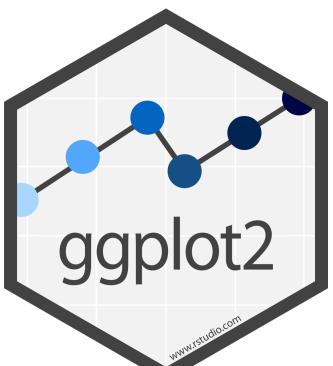

getwd()

# Working directory

R associates itself with a folder (i.e. directory) on your computer.

- This folder is known as your "**working directory**"
- When you save files, R will save them here
- When you load files, R will look for them here
- When using an R Notebook, the working directory is the same as the directory that the R Notebook is saved in

# Saving plots

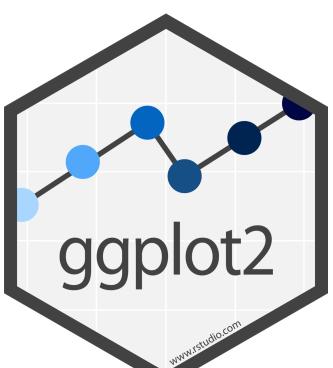

**ggsave()** saves the last plot.

Uses size on screen:

```
ggsave("my-plot.pdf")  
ggsave("my-plot.png")
```

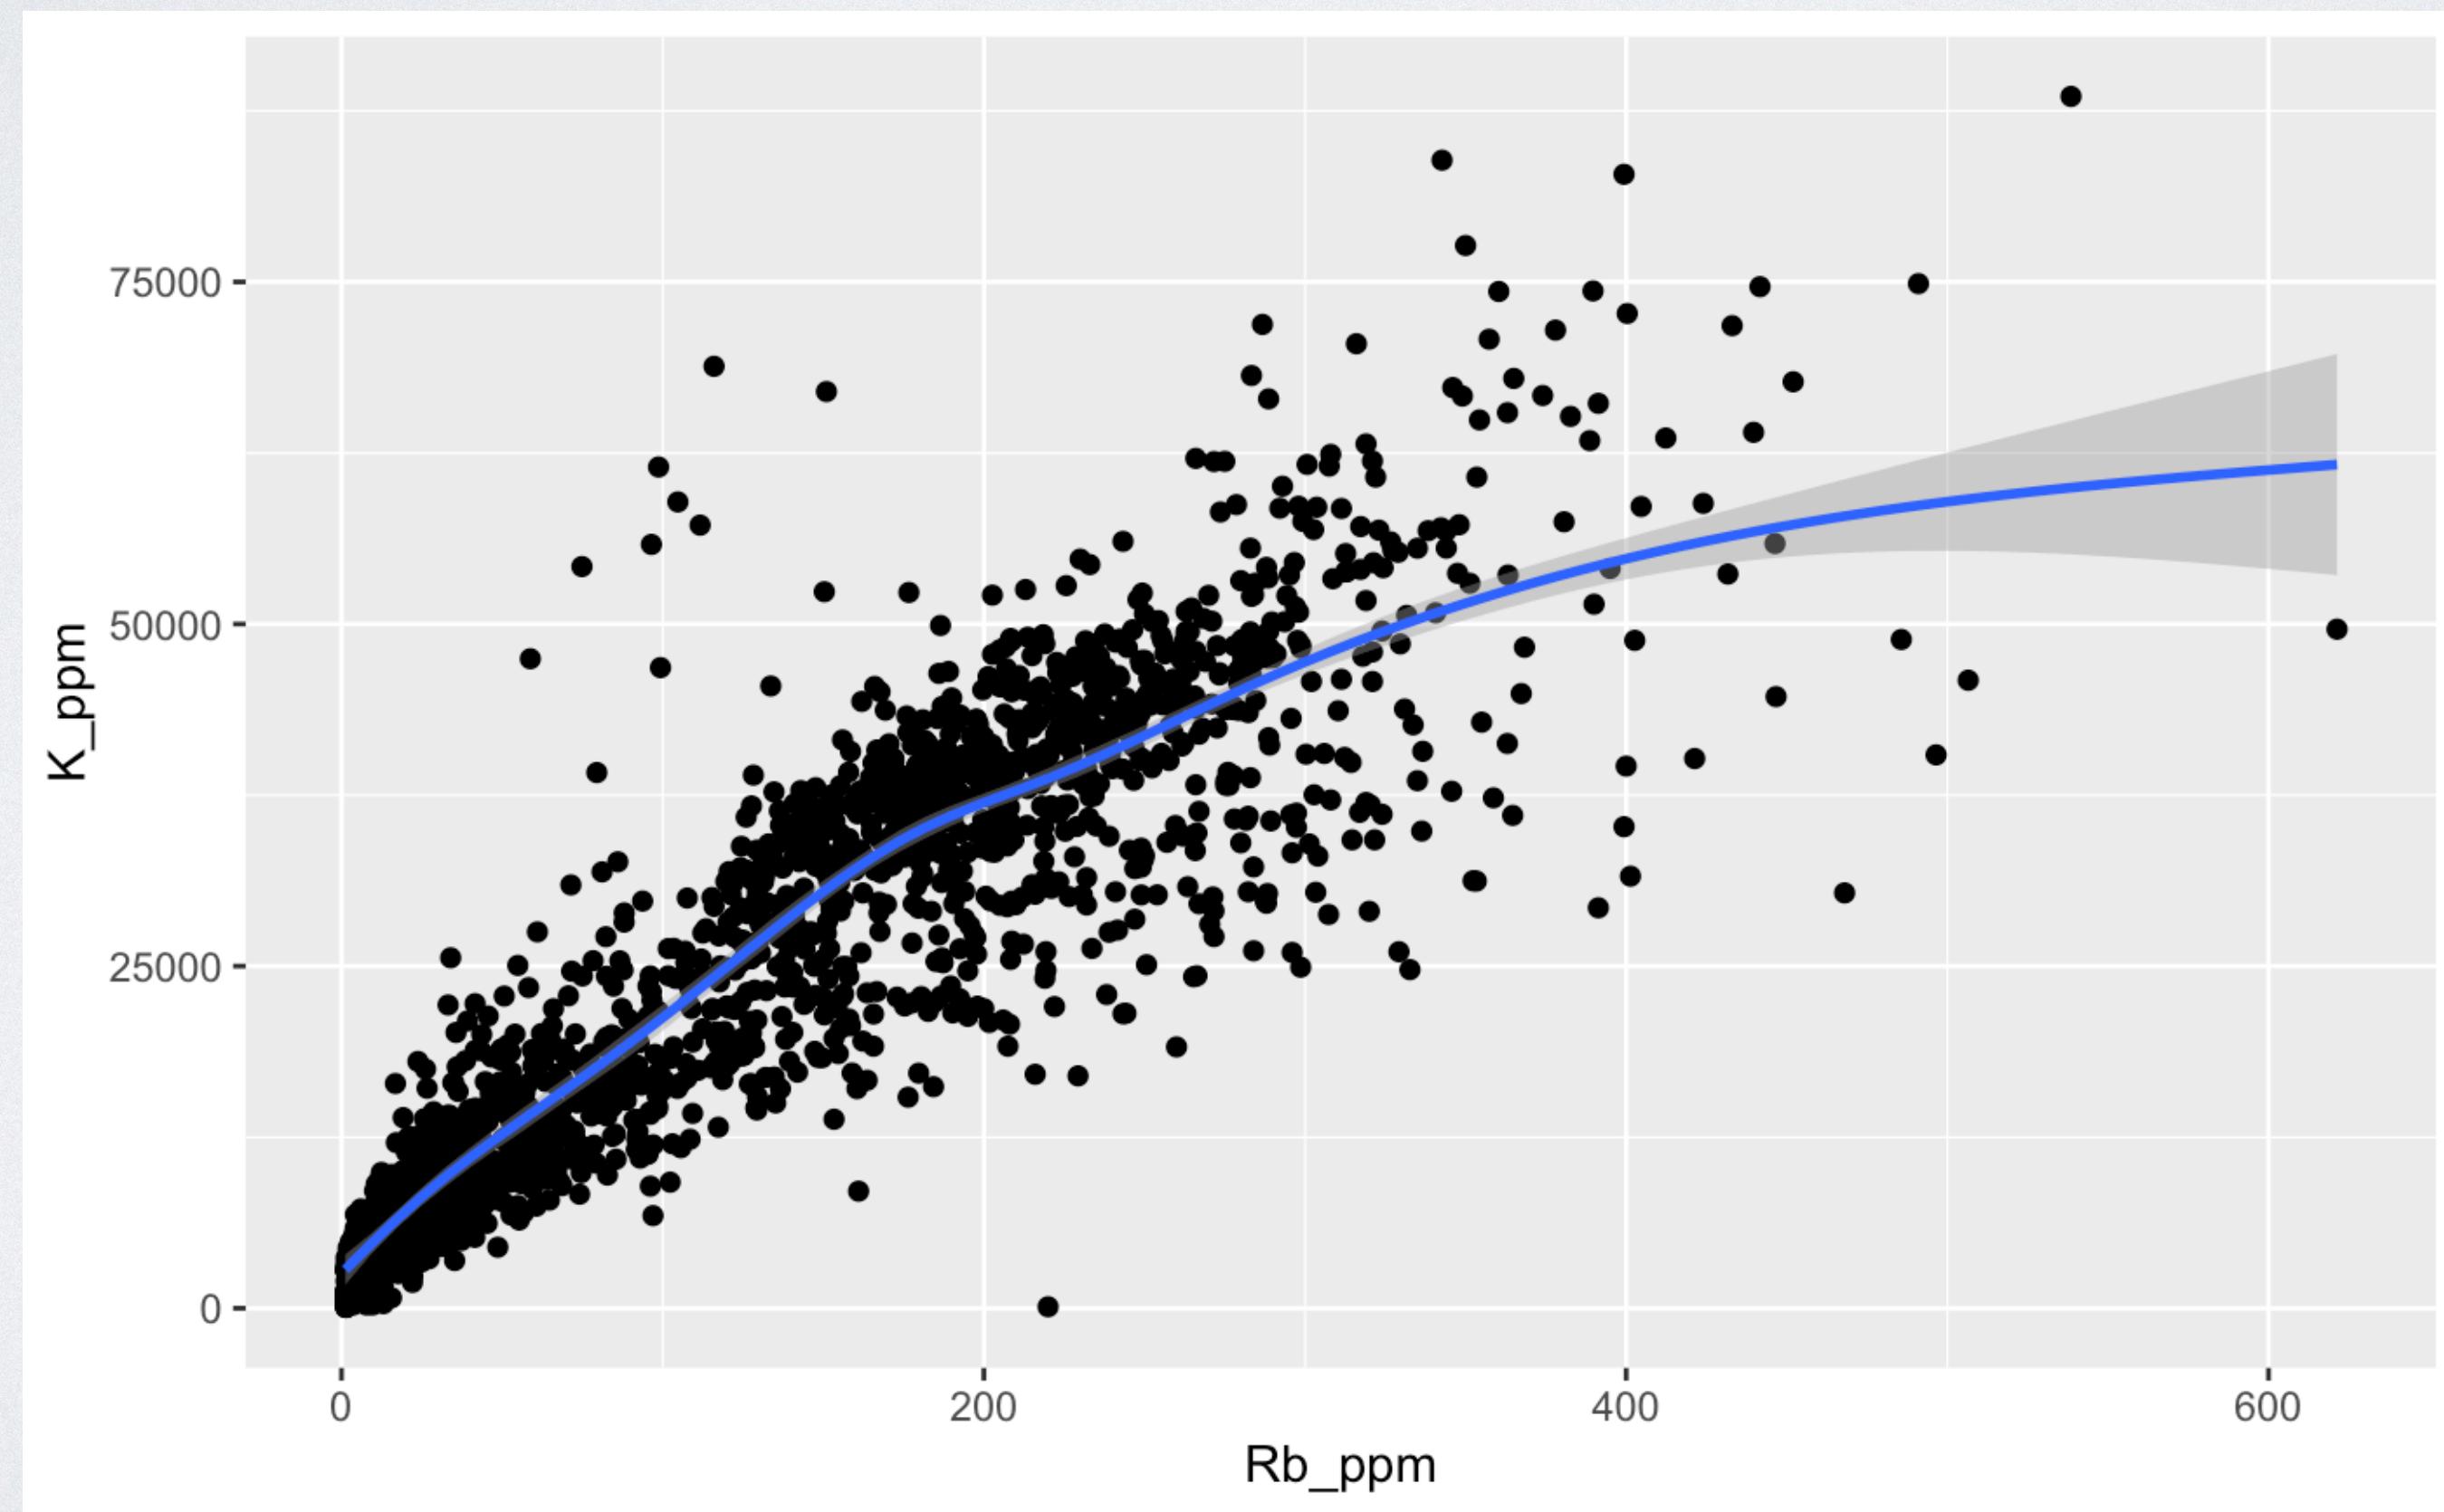

Specify size in inches

```
ggsave("my-plot.pdf", width = 6, height = 6)
```

# Your Turn 8

Save your last plot and then locate it in your files pane and download it. (You may have to refresh the files list).

# ggplot2.tidyverse.org

The screenshot shows a web browser window displaying the ggplot2.tidyverse.org website. The title bar reads "Create Elegant Data Visualisati x" and "Garrett". The address bar shows the URL "ggplot2.tidyverse.org". The page content includes a header with the ggplot2 logo and "part of the tidyverse". A main section titled "Usage" contains text about the philosophy of ggplot2 and a code snippet. To the right, there are "Links" to CRAN, GitHub, issues, and more. At the bottom, there's a plot and developer information.

## Usage

It's hard to succinctly describe how ggplot2 works because it embodies a deep philosophy of visualisation. However, in most cases you start with `ggplot()`, supply a dataset and aesthetic mapping (with `aes()`). You then add on layers (like `geom_point()` or `geom_histogram()`), scales (like `scale_colour_brewer()`), faceting specifications (like `facet_wrap()`) and coordinate systems (like `coord_flip()`).

```
library(ggplot2)

ggplot(mpg, aes(displ, hwy, colour = class)) +
  geom_point()
```

class

2seater
